Size of cutter, inch	1⅜
Weight each, lbs	1¼
Each	$3.75

PLANES

Manufactured by Stanley Rule and Level Co.

BLOCK

Nickel plated trimmings. Knuckle joint. With screw, lever and throat adjustments.

Nos.	18	19
Length, inch	6	7
Size of cutter, inch	1⅝	1⅝
Weight each, lbs.	1¾	1¾
Each	$4.50	5.00

RABBET AND BLOCK

Nickel plated trimmings. With screw adjustment. Right side detachable to change to rabbet cutter, set on a skew.

No.	140
Length, inch	7
Size of cutter, inch	1¾
Weight each, lbs.	1¼
Each	$4.75

BULL NOSE RABBET

Japanned trimmings. Not adjustable.

No.	75
Length, inch	4
Size of cutter, inch	1
Weight each, lb.	¾
Each	$1.50

CABINET MAKERS RABBET

Plane will lie perfectly flat on either side and can be worked either right or left hand. Has adjustable throat and handy grip. Nickel plated. With screw adjustment.

No.	80
Length, inch	4
Size of cutter, inch	1
Weight each, lb.	1
Each	$6.75

Nickel plated. With screw adjustment

No.	92
Length, inch	5½
Size of cutter, inch	⅝
Weight each, lbs.	1½
Each	$6.75

Nickel plated. Without screw adjustment

Nos.	93	94
Length, inch	6¼	7¼
Size of cutter, inch	1	1¼
Weight each, lbs.	1¾	2
Each	$9.00	9.75

Note—No. 92 planes are designed for fine cabinet work where extreme accuracy is required. The sides and bottom being square with each other, the plane will lie perfectly flat on either side, and can be used right or left.

SIDE RABBET

Used for side rabbeting and trimming dadoes, moulding and grooves of all kinds The reversible nose piece gives the tool a form by which it will work close into the corners.

	Right hand	Left hand
Nos.	98	99
Length, inch	4	4
Size of cutter, inch	½	½
Weight each, lb.	¾	¾
Each	$3.30	3.30

LOW ANGLE JACK

This plane is especially adapted for use in cutting across the grain on heavy work, where more power is required than can be obtained from the ordinary block plane. Throat and screw adjustments.

No.	62
Length, inch	14
Size of cutter, inch	2
Weight each, lbs.	3¾
Each	$10.25

PIANO MAKERS EDGE

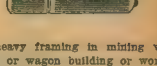
No 97

A useful tool for piano makers and all cabinet workers, for trimming inside work where space prevents the use of any other plane. Screw adjustment.

No.	97
Length, inch	10
Size of cutter, inch	2¼
Weight each, lbs.	3¾
Each	$8.00

All above, one in a cardboard box.

CARRIAGE MAKERS RABBET



For heavy framing in mining work, carriage or wagon building or work of similar nature.

Nos.	10½	10
Length, inch	9	13
Cutter, inch	2¼	2¼
Weight each, lbs.	3	4¼
Each	$9.75	11.75

PLANES

Manufactured by Stanley Rule and Level Co.

IMPROVED RABBET

Will lie perfectly flat on either side, and can be used right or left hand equally well, while planing into corners or up against perpendicular surfaces. Fitted with a depth gauge. Improved rabbet and spur, permitting using across grain.

	Without Spur Cutter		With Spur Cutter		
Nos.	180	182	190	191	192
Length, inch	8	8	8	8	8
Cutter, inch	1¼	1	1½	1¼	1
Weight each, lbs	2¾	2	2¾	2¼	2
Each	$5.00	5.00	5.25	5.25	5.25

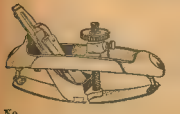
RABBET AND FILLETSTER

The arm to which the fence is secured can be screwed into either side of the stock, thus making a superior right or left hand filletster, with adjustable spur and depth gauge. Remove the arm to which the fence is secured, making a handled rabbet plane and with two seats for the cutter, so that the tool can be used as a bull-nose rabbet if required.

No 78

No.	78
Length, inch	8½
Cutter, inch	1½
Weight each, lbs	3
Each	$6.00

VICTOR CIRCULAR



This is a more recent and improved design. The face is fastened at each end to the plane body, and adjusted by a screw at the center. Nickel plated.

No.	20
Length, inch	10
Cutter, inch	1¾
Weight each, lbs	4
Each	$14.00

IMPROVED DADO

Cutter is set on a skew. Fitted with adjustable depth gauge and two adjustable spurs.

No. 39—							
Cutter, inch	¼	⅜	½	¾	⅝	¾	1
Length, in.	8	8	8	8	8	8	8
Wght ea, lbs.	2	2	2	2¼	2¼	2½	2½
Each	$6.00	6.10	6.25	6.75	7.25	7.50	7.75

All above, one in cardboard box.

Adjustable fence slides under the bottom, regulating the width of cut. Fitted with two spurs, one on each side, and it also has an adjustable depth gauge. Cutter is adjustable endwise.

No.	278
Length, inch	6¾
Cutter, inch	1
Weight each, lbs	2
Each	$6.00

SKEW CUTTER, FILLETSTER AND RABBET

Tempered and polished tool steel cutters. Equipped with a fence which can be attached to either side of the plane so that it can be used either right or left hand.

No.	289
Length, inch	8½
Cutter, inch	1¾
Weight each, lbs	4
Each	$7.50

ADJUSTABLE CIRCULAR

By means of the graduated scale on the gears, the flexible steel face can be easily shaped to any required arc, either concave or convex, by turning the knob on the front of the plane.

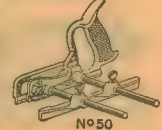
No.	113
Length, inch	10
Cutter, inch	1¾
Weight each, lbs	4
Each	$12.50

COMBINED BEADING AND MATCHING

By adjustment of the fence, center beading can be done up to 5 inches from the edge of a board. Except for working across the grain the spurs need not be used.

The cutters comprise 7 plow and dado bits, ⅛, 7/32, ¼, 5/16, ⅜, 7/16, ½, ⅝ and ¾-inch; 7 beading tools, ⅛, 7/32, ¼, 5/16, ⅜, 7/16 and ½ inch; and a ¼-inch tonguing tool.

Nickeled stock and fence.



No 50

No.	50
Length, inch	9½
Weight each, lbs	4
Each	$15.00

PLANES

Manufactured by Stanley Rule and Level Co.

SWINGING FENCE MATCH

Has two plow cutters of the width, and one extra wide cutter. The fence in one setting exposes two cutters for cutting the tongue, and, when reversed, leaves only one exposed for cutting the groove. On thicker boards than the plane works on center, the extra wide cutter is substituted for groove cutter when cutting tongue. Nickel plated. Rosewood knobs.

Nos.	48	49
Cuts groove, inch	⅞	⅞
On boards, inch	¾ to 1¼	½ to ¾
Centers on, inch	⅞	⅞
Weight each, lbs	3¾	2¾
Each	$9.75	9.75

DOUBLE END MATCH

Provided with both tongue and groove irons. With one side a tongue can be cut, and by reversing ends the plane will cut a groove to fit. The tonguing tools are made wider on one side for use on thicker stuff than the plane will tongue and groove in the center.

No.	148
Cuts groove, inch	⅞
On boards, inch	¾ to 1
Centers on, inch	⅞
Weight each, lbs	2⅝
Each	$8.00

ROUTER

OPEN THROAT

For surfacing the bottom of grooves or other depressions parallel with the general surface of the work. Open throat. Bottom designed so that an extra wooden bottom of any size desired can be screwed on, enabling routing on large openings. Nickeled.

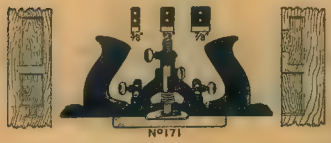
No.	71
Length, inch	7½
Cutter, inch	¼ ½
Weight each, lbs	2⅝
Each	$7.50

CLOSED THROAT

Same as No. 71, but with closed throat.

No.	71½
Length, inch	7½
Cutter, inch	¼ ½
Weight each, lbs	2⅝
Each	$5.40

DOOR TRIMMER

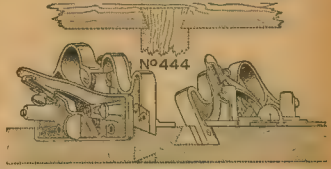


Will make mortises for butts, face plates, strike plates, escutcheons, up to depth of ⅝-inch and a width of 3 inches. The fence regulates the position of the cut and insures sides of cut being parallel. Japanned.

With three forged steel cutters, ¾, ⅝ and ⅞-inch.

No.	171
Length, inch	11
Weight, lbs	3¾
Each	$10.50

DOVETAIL TONGUE AND GROOVE

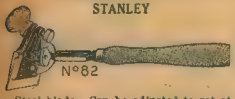


Cuts both tongue and groove for dovetail work. Four cutters are furnished with each plane, three of which are for cutting grooves of different sizes and one for cutting tongues of any size. Complete instructions for operating accompany each plane. Nickeled.

No.	444
Length, inch	9
Weight, lbs	6½
Each	$21.50

All above, one in a cardboard box.

ADJUSTABLE
STANLEY



Steel blade. Can be adjusted to set at any angle. Japanned cast iron frame and hand e shank. Polished maple handle and knob. Steel screw.

No.	82
Size of blade, inch	3
Length over all, inch	14½
Weight each, lbs.	1¾
Each	$3 80
Extra cutters	Each $0.45

One in a cardboard box.

SCRAPER AND HOLDER

Any style or size of scraper can be firmly held. The slant enables its use in corners and out-of-way places. Each holder furnished with a beveled edge blade. Plain beechwood handle. Tempered and polished tool steel blade. Malleable iron clamp and screw.

No.	2
Length handle, inch	12
Blade, inch	3x3
Weight per dozen, lbs.	12
Per dozen	$12.00

One-half dozen in cardboard box.

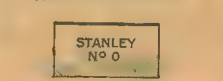
CABINET SCRAPERS
MALLEABLE IRON
STANLEY

Blade may be sprung to a slight curve by the thumb screw shown at center of cut which will be found a great advantage in working with this tool. Raised handles.

No.	80
Size of blade, inch	2¾
Length over all, inch	11
Weight each, lbs.	2
Each	$2.40
Extra cutters	Each $0.45

One in a cardboard box.

STANLEY FLAT STEEL



Flat 18 gauge steel. Cut from saw steel. Polished and tempered.

Nos.	20	22	
Size, inch	2½x5	3x4	
Weight per dozen, lbs.	2	2	
Per dozen	$7 50	7 50	
Nos.	24	26	28
Size, inch	3x5	3x6	3½x6
Weight per dozen, lbs	2½	3	3¾
Per dozen	$9.00	9.00	10.50

One-half dozen in a cardboard box.

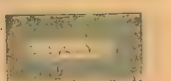
STEARNS

The blade of this scraper is of special quality steel, carefully tempered. Malleable frame. Japanned finish. Raised handles.

No.	8
Size of blade, inch	2¾
Length over all inch	11
Weight each, lbs.	2
Per dozen	$21.00

One in a cardboard box.

DISSTONS FLAT STEEL



Made from 18 gauge crucible steel, highly polished.

Nos.	34	35	
Size, inch	3x4	3x5	
Weight per dozen, lbs.	2	2	
Per dozen	$2 50	2 70	
Nos.	36	44	45
Size, inch	3x6	4x4	4x5
Weight per dozen, lbs	2½	3	3½
Per dozen	$2 80	3 10	3 40

One dozen in a cardboard box.

CABINET SCRAPERS
STARRETTS UNIVERSAL

Edges of blades are ground perfectly square. There are therefore eight sharp cutting edges, and any of them can be brought into use by means of the handle with its ball joint connections. To lock or release the joint or place the blade at any angle it is simply necessary to give the handle a slight turn. Blade can be removed by removing the wing nut. Guard may be instantly slipped on or off either side or end of blade, and enables one to use the tool with arm grip.

No.	194
Weight each, lbs.	1¼
Each	$1 20
Extra Blades	Each 0.20

One in a cardboard box.

FLOOR
STEARNS

Adjustable cross-handle. Aluminum finish, with rubber wheels. The knife scrapes the floor when the machine is drawn towards the operator, and will, therefore, in connection with the adjustable cross-handle, which may be placed to one side or the other, work up to the wall and into corners. On using this see that the screw in the top of the cap is adjusted so that it will strike level on the knife. After once getting this screw in the proper place, leave it there, and in removing the knife for sharpening, always use the screw where the slot is. The knife is firmly clamped in the scraper, which, together with the weight of the machine, nearly all of which rests on the knife, prevents vibration or chatter, doing away with all wavy effects on the floor.

No.	10
Width of cut, inch	6
Diameter of wheel, inch	5
Length of handle, inch	38½
Length over all, inch	54
Weight each, lbs.	135
Each	$40 00

One in a case.

WOOD BENCH PLANES

Selected and seasoned beechwood. Plain finish. Double cutter, forged from crucible steel, oil tempered, full polished and sharpened

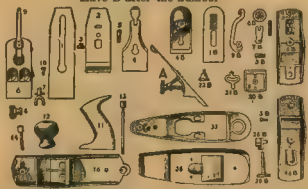
BLOCK PLANES

Have B after the number



No. 1B—Plane iron.
No. 4B—Cap.
No. 5B—Cap screw.
No. 7B—Adjusting lever.
No. 8B—Adjusting nut.
No. 9B—Lateral adjustment.
No. 16B—Bottom (adjustable throat).
No. 20B—Mouth piece.
No. 21B—Eccentric plate.
No. 22B—Knob.
No. 26B—Adjustable frog.
No. 28B—Adjusting screw.
No. 46B—Bottom.

In ordering, care should be taken to always give the number of the plane for which the part is wanted.

PRICE LIST ON PARTS OF PLANES

~~Solitto~~ POCKET KNIVES

~~Solitto~~ Pocket Knives are manufactured in one of the oldest and largest pocket cutlery factories in the United States. From years of operation and experience they are producing a knife which shows workmanship and finish.

OUR GUARANTEE

~~Solitto~~ Pocket Knives are made of **Highest Grade** English crucible steel, hand forged and tempered uniform.
They are made by skilled workmen.
And for quality, style and finish are unexcelled.
We do not warrant them not to wear out or break if they are abused.
They are not made for opening cans or drawing nails.
And should not be sharpened on a dry stone or honed flat.
Use a fine oil stone, and hold blade at an angle of 20 degrees in order to secure a chisel edge.
Oil the joints occasionally, as they are liable to wear rough and the blade points protrude.

WARRANTY ADOPTED BY AMERICAN POCKET CUTLERY MANUFACTURERS

We warrant our Pocket Knives only against flaws in blades and springs. Knives that are much worn, or that have been reground by dealers or consumers, or that have more than one blade broken will not be subject to return or exchange.

For the convenience of our customers, we **stamp the number of the knife on the tang of the large blade** which avoids confusion of your stock. On the tang of the smaller blade we stamp "Oil the Joints," which brings to the attention of the user the necessity of oiling the joints, thereby prolonging the life of the knife.

The following Illustrations show the different styles of blades that are furnished in ~~Solitto~~ brand pocket knives:

Spear

Saber

Pen

Clip

Saber Clip

Spey

Sheep Foot

Budding

Pruning

Flexible Nail Knife

Nail File

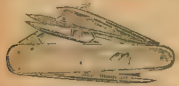
No. 4677—Pearl handle. Per dozen $90.00

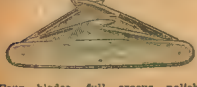


Two blades, scissors and French nail file, full crocus polished. Brass lined, milled edges. Length, 2¾ inches.
No. 4671—Pearl handle. Per dozen $95.00

Two blades and scissors, full crocus polished. Nickel silver lined, milled edges. Length, 3¼ inches.
No. 3682—Pearl handle. Per dozen $72.00

Two blades and flexible nail file, full crocus polished. Nickel silver tips. Nickel silver lined, milled edges. Length, 3¼ inches.
No. 3688—Pearl handle. Per dozen $63.00

Two blades and flexible nail file, full crocus polished. Nickel silver cap and bolster. Brass lined, milled edges. Length, 3 inches.
No. 3687—Pearl handle. Per dozen $46.80

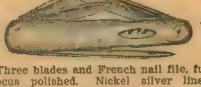


Four blades, full crocus polished. Nickel silver lined, milled edges. Length, 3¼ inches.
No. 4690—Pearl handle. Per dozen $63.00

No. 4465
Three blades and French nail file, full crocus polished. Nickel silver tips. Nickel silver lined, milled edges. Length, 3¼ inches.
No. 4465—Genuine stag handle.
Per dozen $56.00
No. 4665—Pearl handle. Per dozen $72.00

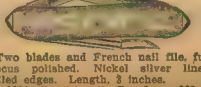
Four blades, full crocus polished Nickel silver lined, milled edges. Length, 3¼ inches.
No. 4677—Pearl handle. Per dozen $72.00

Four blades, full crocus polished Nickel silver lined, milled edges. Length, 3 inches.
No. 4689—Pearl handle. Per dozen $72.00
No. 4697—Japanese pearl handle. Fitted with shackle. Otherwise same as No. 4685.
Per dozen $72.00



Three blades and French nail file, full crocus polished. Nickel silver lined, milled edges. Length, 3 inches.
No. 4664—Pearl handle. Per dozen $72.00

Two blades and French nail file, full crocus polished. Nickel silver lined. Length, 3¼ inches.
No. 3623—Pearl handle. Per dozen $63.00



Two blades and French nail file, full crocus polished. Nickel silver lined, milled edges. Length, 3 inches.
No. 3601—Pearl handle. Per dozen $62.00

Two blades and French nail file, full crocus polished. Nickel silver tips. Nickel silver lined, milled edges. Length, 3⅛ inches.
No. 3646—Pearl handle. Per dozen $68.00

Two blades and French nail file, full crocus polished. Nickel silver lined, milled edges. Fitted with shackle. Length, 3⅜ inches.
No. 3663—Japanese pearl handle.
Per dozen $72.00

Two blades and French nail file, full crocus polished. Nickel silver lined, milled edges. Fitted with shackle. Length, 2¾ inches.
No. 3699—Japanese pearl handle.
Per dozen $61.00

Two blades and French nail file, full crocus polished. Nickel silver lined, milled edges. Length, 2¾ inches.
No. 3642—Japanese pearl handle.
Per dozen $63.00

Two blades and French nail file, full crocus polished. Nickel silver lined, milled edges. Length, 2¾ inches.
No. 3695—Pearl handle. Per dozen $63.00

Average weight, 1½ lbs per dozen. One-half dozen in a box.

UNIVERSAL CUTLERY DISPLAY CASE

Side View

Front View

The sale of cutlery is perhaps more dependent upon attractive display than almost any line carried by the merchant. Attractive show cases, in turn, give the store a bright appearance which enhances the general effect and of course contributes to the sales.

The outside Universal Cutlery Case calls attention to a selected list of cutlery items in a different way from the usual display case. They stand up and intercept the eye. They cannot be overlooked.

Means are provided for securing all kinds of cutlery effectively with number and price to attract the attention of the prospective customer.

No. 1—Plate glass front and sides. Nickel plated top and base oak trimmings. Green plush removable boards. Height, 33½ inches; width of back, 8¾ inches; outside depth, 8 inches. Shipping weight, 30 lbs.

Each **$15.00**

AUTOMOBILE WRENCHES

"WALDEN-WORCESTER"

MACHINE MADE SOCKETS

Sockets are Steel, Machine Made from the Solid Bar. Broached Depth is the Thickness of the Nut to be fitted, and Broached 1/64 in. Over the Size of the Nut. Sockets are Counter Drilled, making extreme bolt size depth of socket 1/32 in more than the thickness of the nut. The Outside Diameter of the Socket Size and Taper have been designed to Insure Strength and Service Conditions. The Broached End is Countersunk Slightly to Relieve the Square Edges and to allow more Rapid Placing of Socket on Bolt Head.

For Hexagon Heads

BRACE SOCKET SPEED WRENCHES

Length Overall, 18¾ in.; Shank 11¼ in.

Long Shank Brace Socket Wrenches are used as Speed Tools in Assembling and Dismantling all kinds of machines and are particularly popular and effective tools on motor car work.

Are most efficient when used on a series of the same sized nuts as on Cylinder Heads. To gain most time, are used in combination with a regular offset wrench which allows more leverage for first releasing or final tightening of the nuts. These are indispensable tools in any repair shop. New Metal Knob Tops which operate on Coes Bearings add materially to service value of the tool.

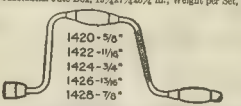
Packed in a Substantial Jute Box, 10¾x7¼x3¾ in.; Weight per Set, 16¾ Lbs. $8 00



TIRE AND RIM WRENCHES

Length Overall, 13½ in.; Sweep 10 in.

This is a popular type of Wrench for Use on Demountable Rims. The Steel Sockets are Machine Turned and Broached Accurately to Size and so fastened to the wire that they cannot turn (no pins to shear off). The Swivel Handles are Pressed Steel. There is only one size nut on any rim so that this solid handle tool fills all requirements (no loose sockets to be misplaced). Tire changes are emergency work and dependable tools are worth all they cost.

All Listed Sizes in Wire Handle Socket Wrenches are the Short Diameter of Nut or Bolt Head to be Fitted

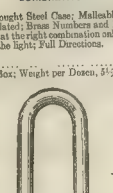
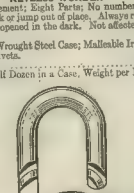
One in a Box; Half Dozen in a Case, Weight per Dozen, 4 Lbs.





JUNKUNC COMBINATION

Especially Recommended for Use on Motorcycles, Automobiles, Doors, Chests, Lockers, etc.

Made Entirely of Rolled Brass, as Neat as a Watch and Finished like a Jewel; 51,000 Combinations; Nothing to Get Out of Order; Will not Freeze and Cannot be Tampered with. Operates the same as the Lock on a Safe; the Entire Construction comprises but Five Parts. It is the Only Lock without a Spring, Rivet, Pin or Loose Part. Absolutely nothing to get out of order; Adjusted so Delicately and so Accurately that it cannot be picked. Locks on both sides of the Hasp. Only one Nut is Turned on the Dial, by one can Lock or Unlock it who knows the Combination, otherwise it cannot be opened. All parts are lubricated and fit so close that water or dampness cannot get inside to rust.

Class "A"

Used Exclusively for Motorcycles.

	Each
No. A—1¾ in. Case; ½ in. Hasp; Inside Measurements of Hasp, ⅜ in. Wide, 6⅛ in. Long	$2 00

Weight Each, 11 Oz.

1½ in. Heavy **Wrought Steel Case,** Malleable Iron Self-Locking Spring Shackle; Six Secure Levers; Two Double-Bitted Barrel Keys; 12 Key Changes.

Per Dozen

No. 4374¼—Brass Plated Case and Shackle.....$4.00
Weight per Dozen About 2 Lbs.

2½ in. Extra Heavy Wrought Steel Case, all Brass Works; Malleable Iron Spring Shackle; Eight Secure Levers; Two Double Bitted Steel Keys; 12 Key Changes.

WITHOUT CHAIN

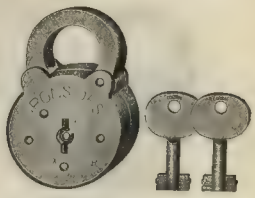
Per Dozen

No. 2916½ —**Brass Plated** Case and Shackle..... ....$ 9.50
No. 2916½G —**Galvanized** Case and Shackle..... 12.00
No. 2916½GA—**Keyed Alike,** Otherwise same as 2916½G.... 10.00
Weight per Dozen 7 Lbs.

WITH 9 INCH STEEL CHAIN.

Per Dozen

No. 2916½C —**Brass Plated** Case and Shackle.....$11.50
No. 2916½GC —**Galvanized** Case and Shackle..... 12.00
No. 2916½GCA—Keyed Alike, Otherwise same as 2916½GC 12.00
Weight per Dozen 8¾ Lbs.



WITHOUT CHAIN

2 in. Extra Heavy Steel Case, all Brass Works; Malleable Iron Spring Shackle; Six Secure Levers; Two Double Bitted Steel Keys

Per Dozen

No. 915½ —**Brass Plated** Case and Shackle.....$ 6.00
No. 915½A—Keyed Alike, Otherwise same as 915½..... 6.00
No. 915½G—Galvanized Case and Shackle..... 6.50
No. 0915½ —All Brass, Profiled finish..... 10.00
No. 0915½A—Keyed alike otherwise same as 0915½..... 10.00
Weight per Dozen 4⅞ Lbs.

WITH 9 INCH STEEL CHAIN.

Per Dozen

No. 915½C —**Brass Plated** Case and Shackle.....$ 7.50
No. 915½CA —Keyed alike otherwise same as 0915½C..1. 7.50
No. 915½GC —**Galvanized** Case and Shackle..... 8.00
No. 915½GCA—Keyed Alike, Otherwise same as 915½GC.. 8.00
No. 0915½C —All Brass, Profiled Finish..... 12.00
No. 0915½CA —**Keyed Alike,** Otherwise same as No. 0915½ 12.00
Weight per Dozen 5¾ Lbs.

Ivory Black **Wrought Steel Case;** Nickel Plated, Self-Locking, Automatic Spring Shackle that flies open to a quarter-turn position when unlocked; Two Nickel Plated, Corrugated Steel Keys; 12 Key Changes.

Per Dozen

No. 4095—3 in. Case; Weight per Dozen 3½ Lbs.....$6.00
Half Dozen in a Box

PADLOCKS

Cut Shows No. 04385

Per Dozen

No. 04387—1¼ **in. Polished Cast Bronze Case** and Self-Locking Spring Shackle; Two Flat Steel Keys; 6 Changes; Weight per Dozen, 2½ Lbs. $5 00

No. 04385—2 in **Polished Cast Bronze Case** and Self-Locking Spring Shackle; Two Nickel Plated **Flat Steel Keys**; 6 Changes; Weight per Dozen, 4½ Lbs. 7 00

No. 04267—2 in. **Cast Brass Case**; Black Nickel, Wrought Steel, Self-Locking Spring Shackle; Two Nickel Plated **Corrugated Steel Keys**; 6 Changes, Weight per Dozen, 3½ Lbs. 5 00

Half Dozen in a Box.

Polished Cast Brass Case; Nickel Plated Iron Wire, Self-Locking Automatic Spring Shackle that flies open to a quarter-turn position when unlocked. Two Nickel Plated Flat Steel Keys; 6 Key Changes.

Per Dozen

No. 04606—1¼ in. Case; Weight per Dozen, 3¾ Lbs. $4.50
No. 04607—1½ in. Case; Weight per Dozen, 4½ Lbs. 5 00
No. 04608—2 in. Case; Weight per Dozen, 5½ Lbs. 6 00

04608 One Dozen, Balance Half Dozen in a Box.

WITH 9 INCH CHAIN

Per Dozen

No. 04606C—1¼ in. Case; Weight per Dozen, 4¾ Lbs. $6.00
No. 04607C—1½ in. Case; Weight per Dozen, 5¼ Lbs. 6.50
No. 04608C—2 in. Case; Weight per Dozen, 6 Lbs. 7 50

RURAL FREE DELIVERY

Cast Bronze Case, Polished with Black Back Ground; Self-Locking, Automatic Spring Shackle, that flies open to a quarter-turn position when unlocked. Two Nickel Plated Corrugated Keys; 18 Changes; **One Master Key** Packed with Each Dozen.

Per Dozen

No. 04227 —1¼ **in.; Without Chain**; Wt. per Doz., 3½ Lbs. $5 00
No. 04227C—With 6 in. Brass Chain; Wt. per Doz., 3¾ Lbs. 6 00

One Dozen in a Box.

Japanned Steel Case, with Brass Shackle Stop on top of case; Steel Rod Nickel Plated Shackle that Flies Open to quarter-turn position when unlocked. Self-Locking; Brass Inside Works; Nickel Plated Flat Steel Corrugated Keys; 6 Key Changes.

Per Dozen

No. 206—Size 1¼ in. $5.70

Half Dozen in a Box.

Weight per Dozen, 2¾ Lbs.

IGNITION COILS

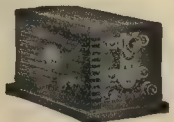
MAKE AND BREAK COILS

"Jefferson" Steel Case With Switch

Most Adaptable for Engines where they are Exposed to the Weather. Coils are Immersed in a Special Insulating Compound which renders them Impervious to Moisture and Practically Indestructible. A Hot, Intensive Spark is produced at all times at a minimum current consumption.

	Each
No. 16—Dimensions Overal., 2½x2½x6 in.	$1 75

Weight Each about 3 Lbs.



VIBRATING COILS

"Jefferson" Box Type

Highly Efficient and Extremely Economical on Battery Current. They are Designed to Answer the Most Rigid Requirements of Automobiles, Motor Boats or Stationary Gas Engines.

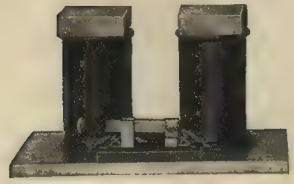
Coils are equipped with a Trouble-proof Vibrator, which is guaranteed to give satisfaction and last a lifetime. It is Absolutely Impossible to Adjust the Vibrator to Consume an Excessive Amount of Current, neither can it be Adjusted to Stop the Engine from Working.

Coils are so carefully balanced that arcing at Contact Points is Practically Impossible.

	Each
Single Cylinder, Box Type	$4 50
Double Cylinder, Box Type	9.00

REMAGNETIZERS

A Magneto needs Care just as well as the Motor. Charge the Magneto once a year.



MIDWAY

Distance Across Poles, Outside 5¼ in., Inside 1¼ in.; With Extra Pole Plates, Outside 6⅝ in., Inside 3½ in. Cores and Polished Pole Plates of Special Soft Iron. Base Plate of Black Enameled Iron.

Knife Switch with Terminals Mounted on Base.

	Each
Volts 12; Designed Amperes 7; For Magneto up to 6.6 sq. in. x13 in. Using Voltage of 6-10 Volts, and 1 sq. in.x13 in. using Voltage of 10-15 Volts	$20 00

One in a Box; Shipping Weight 13 Lbs.

FORD SPECIAL

Charges Ford Magneto without Removing from Flywheel. Distance Across Poles, Outside 2⅞ in., Inside 1⅝ in. With Extra Pole Plates, Outside 4⅝ in., Inside 3⅜ in. Cores and Yoke of Special Soft Iron.

Handle of Enameled Hardwood, with 5 ft. Double Core. Reversible Switch on Handle, for **On and Off,** as well as Reversed polarity.

	Each
Volts 6; Designed Amperes 4.8; For Magneto up to 0.5 sq. in. x 10 in. using Voltage of 4-12 Volts	$16.00

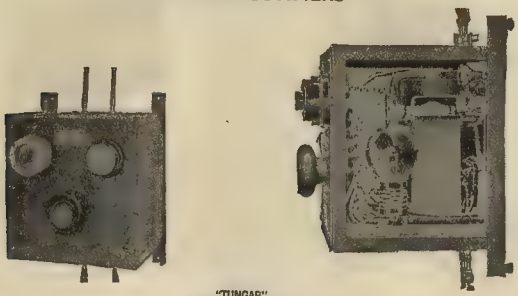
One in a Box; Shipping Weight 6½ Lbs.

Soft Iron Keeper Bar and Full Instructions with Each Instrument

Extra Pole Plates for Odd Size Magneto, Each $2.00

Resistance Bank for use with Low Volt Instruments on High Power Current, Each $5.00

Kelley-How-Thomson Co. of Duluth
CURRENT RECTIFIERS



"TUNGAR"
6-AMPERE, 75-VOLT
For Public Garages and Battery Charging Stations

This Rectifier is primarily intended for use by Public Garages and Battery Service Stations which care for Starting and Lighting Batteries used in Gasoline-Driven Automobiles.

The 6-Ampere, 75-Volt Type of Tungar Rectifier is a simple, low-priced, highly efficient charging set for the Garage or Service Station. It will charge from One to Ten 3-Cell Starting and Lighting Batteries at a 6-ampere (or lower) rate from an Alternative-Current supply.

It is new in principle and is the simplest, most inexpensive, highest-efficiency charging outfit for the purpose ever offered. It reduces the cost of charging and is so extremely simple that anyone can learn to operate it in a few minutes.

The important part of the Tungar is a small gas-filled bulb which contains a filament of tungsten and a graphite anode. This bulb screws into a socket. There is also a compensator with 16 taps, and a dial switch for adjusting the voltage to the number of batteries to be charged. A single three-coil battery may be charged by itself, or 2, 3, 4 or any number up to 10 (30 cells). The current is instantly adjustable in steps to 6 amperes.

The entire apparatus is enclosed in a perforated sheet iron casing with a japanned finish. The front of the case has a panel on which is mounted an ammeter, switch and regulating handle.

Particular attention is called to the fact that there are no live metal parts exposed.

After the two upper wires are connected to the alternating current supply and the direct current leads coming out at the bottom are connected to the battery to be charged (the batteries should be connected in series), just turn on the alternating current with the switch on the panel. The rectifier will start at once and begin charging the batteries. If the alternating current should fail the batteries cannot discharge but the Tungar will immediately resume charging when the alternating current supply returns.

NOMINAL A. C. VOLTAGE 115—VOLTAGE LIMITED 105-125

This 6-ampere, 75-volt Tungar Rectifier has been developed for charging a Three-Cell or a Six-Cell Automobile Starting and Lighting Battery in the Home Garage. Every Car Owner needs a Tungar to Supplement the Work of the Generator on the car — this is particularly true of the winter time, when starting is difficult, the lights are used more and the car is not taken on long trips and the generator therefore cannot properly replenish the batteries.

To charge a battery with the Tungar Rectifier, simply connect the two leads to the battery, screw the plug into the nearest lamp socket and snap on the switch. Put the charge in at night when you do not want to use your car. An all-night charge gives sure start in the morning.

The Tungar Rectifier is designed on a New Principle and has but few parts. The elements are a bulb like an incandescent lamp, a little compensator and reactance, a fuse and an Enclosing Case. The bulb will last many hundreds of hours and is easily and cheaply renewed. The complete rectifier weighs only 15 lbs., it is 10 in. high, 6¾ in. wide and 8 in. deep.

	Each
No. 195530—Tungar Rectifier Designed for 115-volt, 60-cycle Circuits, but may be used on 105 to 125-volt circuits	$28.00
No. 189048 — Renewal Bulb	8.00

TUNGAR
A Rectifier for Charging, Starting and Lighting Batteries in the Home Garage.

FOR FORD AND K. W. COILS

Used on Ford Cars

For Vibrator Points used on Fordson Tractors, and for Heavy Duty, use CC5 and CC8

CC1—Tungsten Pointed Bridge, to fit KW and Ford coils. Used opposite CC2 (4 to a set)..... Each $0.18

CC2—Tungsten Pointed Spring, to fit KW and Ford coils. Used opposite CC1. (4 to a set.) ..... Each .14

CC3—Gilfoil Pointed Bridge, large size point, to fit KW and Ford coils. Very superior quality. Used opposite CC4. (4 to a set.) (See cut CC1)..... Each .28

CC4—Gilfoil Pointed Spring, large size point, to fit KW and Ford coils. Very superior quality. Used opposite CC3. (4 to a set.) (See cut CC2.)..... Each .22

CC5—Tungsten Pointed Bridge, medium size point (see cut CC1). To fit Ford coils on Fordson Tractor. Used opposite CC6. (4 to a set.) ..... Each .38

CC6—Tungsten Pointed Spring, medium size point (see cut CC2). To fit Ford coils on Fordson Tractor. Used opposite CC5. (4 to a set.)..... Each .32

FOR CONNECTICUT DISTRIBUTOR

CC11—Timing Set Screw Wrench, case hardened (5/32 in. hexagon) to fit Models 15 and 15T ignitors ..... Each $0 16

CC12—Timing Set Screw Wrench, case hardened (1/4 in. hexagon) to fit Models 15 and 15T ignitors..... Each 16

CC13—Fibre Bushing, to fit stud on breaker plate. Models 15 and 16 ..... Each 08

CC14—Metal Stud, complete with fibre bushing, washers and cotter pin. This part used to adapt CC15 breaker lever to Model 16 (riveted type) breaker plate ..... Each 60

CC15—Tungsten Pointed Breaker Lever, to fit all models. Used opposite CC16. If lever is riveted on use in connection with CC-14..... Each 1.00

CC16—Tungsten Pointed Contact Screw, to fit all models. Used opposite CC15..... Each .30.40

CC18—Tension Spring, to fit CC15 breaker lever..... Each .16

CC19—Distributor Rotar Arm, to fit Model M15, four- and six-cylinder. For brush to fit this part see CC17..... Each 1.00

CC20—Distributor Rotar Arm, to fit Model 15T, four- and six-cylinder..... Each .60

CC21—Distributor Rotar Arm, to fit models 16 and 16C and six-cylinder..... Each .60

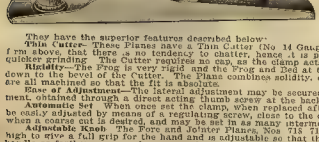
One in a paper box.



They have the superior features described below:

Thin Cutter—These Planes have a Thin Cutter (No. 14 Gauge), but the support for the Cutter is so solid below and the clamp so firm above, that there is no tendency to chatter, hence it is possible to use the Thin Cutter and so get the slight advantage of the quicker grinding. The Cutter requires no cap, as the clamp acts as a breaker for the chip.

Rigidity—The Frog is very rigid and the Frog and Bed at the mouth are in alignment so that the Cutter has an even bearing down to the bevel of the Cutter. The Plane combines solidity, compactness and simplicity. The meeting surfaces of the Frog and Bed are all machined so that the fit is absolute.

Ease of Adjustment—The lateral adjustment may be secured without removing the hand from the handle and the vertical adjustment, obtained through a direct acting thumb screw at the back of the Cutter, is positive and rapid.

Automatic Set—When once set the clamp, when replaced after removal, will always return to its original reset. The clamp may be easily adjusted by means of a regulating screw, close to the cutting edge when a fine cut be required, away from the cutting edge when a coarse cut is desired, and may be set in as many intermediate positions as may be needed.

Adjustable Knob—The Fore and Jointer Planes, Nos. 718, 718C, 722 and 722C, are equipped with an Adjustable Knob. This Knob is high to give a full grip for the hand and is adjustable so that the user may regulate the position of the Knob, bringing it closer to the handle or farther away, as may prefer. This feature makes it convenient for use by carpenters with long or short arms and allows the forward hand plenty of clearance when the Plane is used close up to a projecting surface.

Purpose—These Planes are intended for both heavy and very fine cuts. They are especially adapted for working against the grain on cross-grained hard wood where the absolute rigidity of the Cutter avoids any tendency to chatter.

Polished Trimmings, East India Mahogany Handle and Knob

With Patent Side Adjustment for exact adjusting of the Cutter with the face of the Plane.

Sargent Adjustable Iron Planes with the Automatic Set are in a class by themselves. No other manufacturer makes a plane with so many features. The craftsman who once uses this plane will have no other. Besides its mechanical improvements it is finished with great care. The Handle and Knob are not made of the ordinary rosewood, but are made of East India Mahogany. The trimmings are polished and, in fact, the whole tool is all that can be desired

SEATTLE HARDWARE COMPANY

SARGENT PLANES

BLOCK AND RABBET

Adjustable, polished trimmings, Mahogany handle and Knob.

No. 59—Length, 9 in. Cutter, 3 in. Weight each, 4½ lbs. ..... Each, $5.40

Extra Cutters for Scraper Planes, 2½ and 3 in... " .50

Adjustable Iron Scraper Plane, Japanned, Beech Wood Face Adjustable at any angle.

No. 53—Face, 3½ in. Cutter, 2⅛ in. Weight each, 3½ lbs. ..... Each, $4.30

All above, one in a box.

SEATTLE HARDWARE COMPANY

SARGENT PLANES

COMBINATION

East India Mahogany Handle and Fence Plate With Screw Adjustment

No. 1080—Nickel-plated, 10¾ in. Complete with 25 Cutters in a Wooden Box. Weight each, 13½ lbs.....Each, $19 00

Combination Plane No. 1080 is designed for use in the following types of work: Dadoing, Rabbeting, Tonguеing and Grooving, Beading, Slitting and Sash Cutting. It may also be used as a Fillеtster and with special Cutters as a Reeding Plane.

The principal parts of these Planes are the Bed, Movable Bed and Fence.

The Bed supports the Handle, Cutter Adjustment, Slitting Tool and Depth Gauge.

The Bed and Movable Bed have Spur Cutters which are designed to cut the wood ahead of the Cutters (usually across the grain) at right angles to it, insuring smooth results.

The Movable Bed is used as an additional support with Cutters except the ⅜ inch and narrower.

The Fence, which is reversible for use on wide boards, is also adjustable along the Rods for either side of the Plane. It is designed for service when the Plane is used as a Fillеtster or Plow, to gauge the distance from the Cutter to the edge of the board and holding the Cutter at right angles to it.

These Planes are fitted with two Depth Gauges for regulating the depth of the cut, one located on the Bed and the other on the Movable Bed. The Depth Gauge on the Bed may be raised or lowered by means of an adjusting nut.

The Slitting Cutter is provided with a stop to regulate the depth of the slitting cut.

For Beading or Grooving on the edge of a tongued board where there is not room for the Fence, an Adjustable Guide is provided, replacing the Depth Gauge.

No. 1080 is packed with 25 Cutters, as follows:

Dado Cutters—⅛, 3/16, ¼, 5/16, ⅜, 7/16, ½, ⅝, ¾, ⅞ in.

Rabbet and Fillеtster Cutter—1½ in.

Beading Cutters—⅛, 3/16, ¼, 5/16, ⅜, 7/16, ½, ⅝, ¾ in.

Sash Cutter—1½ in.

Sash Cutter (Reverse of No. 21)—1½ in.

Tonguеing Cutters—¼, 5/16 in.

Slitting Cutter—

East India Mahogany Handle and Fence Plate With Screw Adjustment

No. 1085—Nickel-plated, 10¾ in. Complete with 54 Cutters in a Wooden Box. Weight each, 16 lbs.....Each, $35 40

Combination Moulding Plane No. 1085 will do all the work for which No. 1080 is suitable: Dadoing, Rabbeting, Tonguеing and Grooving, Beading, Slitting and Sash Cutting. It may also be used as a Fillеtster and as a Reeding Plane, and is also adapted for Matching, making Hollows and Rounds, and a variety of Mouldings, including Ogee (Reverse, Roman and Grecian) and Quarter Round.

These Planes include all of the parts of No. 1080, with the exception of the Fence and Movable Bed, which are not required as No. 1085 has a Fence and Movable Bed with a greater variety of adjustments.

The Bed supports the Handle, Cutter Adjustment, Slitting Tool and Depth Gauge.

The Bed and Movable Bed have Spur Cutters which cut the wood ahead of the Cutter (usually across the grain) at right angles, insuring smooth results.

The Movable Bed is used as an additional support for Cutters except on ⅜ inch and narrower.

No. 1085 has two Adjustable Fences, one for use on wide boards, which is reversible, and the other is especially adapted for fine work. Both Fences are designed for convenient use when the Plane is required as a Fillеtster or Plow and in chamfering and in other beveling.

These Planes are fitted with two Depth Gauges for regulating the depth of the cut, one on the Bed and the other on the Movable Bed. The Depth Gauge on the Bed may be raised or lowered by an adjusting nut.

A Stop is provided to be used in connection with the Slitting Cutter where it is desired to regulate the depth of the Slitting cut. When Reading or Grooving on the edge of a tongued board where there is not room for the Fence, an Adjustable Guide is provided.

An Adjustable Stop regulates the thickness of the shavings and eliminates the tendency of the Cutters to tear the wood when making Hollows and Rounds.

No. 1085 is packed with 54 Cutters, as follows:

Dado Cutters—⅛, 3/16, ¼, 5/16, ⅜, 7/16, ½, ⅝, ¾, ⅞ in
Rabbet and Fillеtster Cutter—1½ in.
Reading Cutters—⅛, 3/16, ¼, 5/16, ⅜, 7/16, ½, ⅝, ¾ in.
Sash Cutter—1½ in.
Sash Cutter (Reverse of No. 21)—1½ in.
Quarter Hollow Cutters—½, ⅝ in.
Quarter Round—⅝, ⅞ in.
Reverse Ogee Cutters—½, ¾, 1 in.
Roman Ogee Cutters—⅝, ⅞ in.
Quarter Round with Bead Cutters—⅝, ⅞ in.
Grecian Ogee—½, ¾, 1 in.
Round Cutter—Cuts ½ inch circle, ⅝ in
Round Cutter—Cuts 1 inch circle, ½ in.
Round Cutter—Cuts 1½ inch circle, ¾ in.
Round Cutter—Cuts 2 inch circle, 1 in.
Hollow Cutter—Cuts ½ inch circle, ¼ in.
Hollow Cutter—Cuts 1 inch circle, ½ in.
Hollow Cutter—Cuts 1½ inch circle, ¾ in.
Hollow Cutter—Cuts 2 inch circle, 1 in.

In ordering specify the number of the Part and the number of the Plane for which the Part is wanted.

PILOT BRAND PLANES

Pilot Planes are the result of careful study of all minor details, as well as the principal features, that from the carpenter's point of view, make a perfect plane.

The rich cherry finish of the Handle and Knob, combined with the exceedingly smooth black Japan and high polish of the bright parts, leaves nothing to be desired in the appearance of the Tools.

CUTTERS

The highest development yet attained. Heavier than any other blade on the market, being one-tenth of an inch thick full width made of a superior, high-grade, crucible tool steel, manufactured specially for the purpose—scientifically heat treated and tempered by the most advanced process—practically non-destructible and fully warranted.

CUTTER CAP

The cap is made of high temper, cold rolled steel, and is adjustable to the cutter by means of the usual cap screw.

BOTTOM

The bottom is made of a superior, close-grained, gray iron, of high tensile strength. The surface is perfectly ground and polished.

The frog is made of the same high-grade material as is the bottom. It is well proportioned in its strong sections and is made heavier than is the usual parctice. It is fitted to the bottom of the plane by means of three points of contact, forming one single, level bearing surface a departure from the complicated double contact bearings that are not proof against shavings and dirt which get between the bearing surfaces, causing a rocking motion to the cutter and resultant chatter. The Pilot Plane will not chatter.

ADJUSTMENTS

The forward adjustment for thickness of shavings moves the cutter to a desired position by means of a yoke operated by a slot in the adjusting thumb nut which is made of brass.

The lateral adjustment lever for controlling an even thickness of shaving is made from one sinble piece of high temper, cold rolled steel, and so shaped as to make it easy to operate, and of maximum strength.

The Cutter Clamp bears directly over the arch of the cutter cap, holding the cutter firmly against the Frog, and the Adjustable Clamp screw gives any tension that may be desired.

HANDLES AND KNOBS

Made of hard wood, highly polished.

The bearing surface of the handle is exceptionally long, giving greater rigidity than found in other planes.

The shape and position with extra space in front of handle—keep the fingers from coming into contact with the steel parts (thereby preventing bruises), and gives a firm, comfortable grip, permitting long usage without cramping the hand.

The weight of the different parts of the plane has been properly proportioned. By using a highly improved mixture of close grained gray iron, giving the maximum of tensile strength, the bottom of the plane has been reduced in weight, while other parts have been increased, which insures rigidity and smoothness of operation.

SEATTLE HARDWARE COMPANY

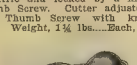
BLOCK

Low Angle

Designed for use on cross grained and hard wood.

Nickel plated and polished fittings.

No. 605—Length, 6 in. Cutter, 1⅝ in. Adjustable Throat, operated by an eccentric and locked by a knurled Thumb Screw. Cutter adjusted by long Thumb Screw with knurled head. Weight, 1¾ lbs.....Each, $2.86



Knuckle Joint

Nickel plated and polished fittings

No. 185—Length, 6 in. Cutter, 1⅝ in Adjustable Throat, operated by an eccentric and locked by a knurled Thumb Screw. Cutter adjusted by knurled Thumb Screw at back of Plane. Weight, 1½ lbs. Each, $2.86

BLOCK

Double End

A combination of Block Plane and Bull Nose Plane, having two cutter seats and slots.

No. 1305—Length, 7¾ in. Cutter, 1⅝ in. Adjustment controlled by knurled Thumb Screw. Weight, 1¾ lbs. . . . . Each, $1.72

Improved, Single End

No. 1205—Length, 7¼ in. Cutter, 1⅝ in. Adjustment simple and positive. Controlled by two knurled Thumb Screws. Weight, 2 lbs... Each, $1.66

STANLEY PLANES

BLOCK AND RABBET

Non-Adjustable

No. 101—Length, 3½ in.; Cutter 1 in. Weight each, ¾ lb. .. Each, $0.60

Non-Adjustable

No. 100—Handled, length, 3½ in.; Cutter, 1 in. Weight each, ¾ lb. . .. ..Each, $1.20

Non-Adjustable

No. 102—Length 3½ in.; Cutter 1⅝ in Weight each, 1 lb.... .Each, $1.20

Lever Adjustment

No. 103—Length 5½ in.; Cutter, 1⅝ in. Weight each, 1 lb. .....Each, $1.60

Non-Adjustable

No. 110—Length, 7½ in.; Cutter, 1⅝ in. Weight each, 1 ¾ lbs.. Each, $1.50

Screw Adjustment

No. 220—Length, 7½ in.; Cutter, 1⅝ in. Weight each, 1¾ lbs....Each, $2.30

Adjustable

No. 130—Double Ender. Length, 8 in, Cutter, 1⅝ in. Weight each, 3 lbs.....Each, $2.30

Plane No. 130 has two slots, and two cutter seats. It can be used as a block Plane, or, by reversing the position of the cutter and the clamping wedge (see dotted lines in the engraving), it can be used to plane close up into corners, or places difficult to reach with any other plane.

LOW ANGLE BLOCK

Adjustable

No. 60—Nickel trimmings, length 6 in., Cutter 1⅝ in Wt. each, 2¼ lbs .. .. Each, $3.80

No. 65—Nickel trimmings, Knuckle Joint, length 7 in., Cutter 1⅝ in. Weight each, 2½ lbs .. ..Each, 4 10

No. 65½—Same as No. 65, but Japanned trimmings, ... ! ... . .Each, 3 60

BAILEY BLOCK

No. 9½—Length 6 in., Cutter 1 ⅝in., Japan trim. Weight each, 1½ lbs.....Each, $3.30

No. 15—Length 7 in., Cutter 1⅝ in., Japan trim. Weight each, 1⅝ lbs.....Each, 2.60

No. 16 Length 6 in. Cutter 1⅝ in.; Nickel trim. Weight each, 1½ lbs. ....Each, 3.70

RABBET AND BLOCK

No. 140—Detachable Side, length 7 in., Cutter 1⅝ in. Wt. each, 2 lbs. . .. . Each, $4.20

A detachable side will easily change this tool from a block plane to a rabbet plane, or vice versa. The cutter is set on a skew.

No. 18—Knuckle Joint, length 6 in., Cutter 1⅝ in. Weight each, 2¼ lbs.....Each, $3.90

No. 19—Knuckle Joint, length 7 in., Cutter 1⅝ in. Weight each, 2½ lbs.....Each, 4.20

No. 9¾—Rosewood handle, length 6 in., Cutter 1⅝ in., Japan trim. Weight each, 2½ lbs... . Each, $3 90

SIDE RABBET

No. 98—Right

No. 99—Left

No. 98—R. H. Length, 4 in. Cutter, ½ in. Weight, 1 lb. .. .. .

STANLEY PLANES

BULL-NOSE RABBET

No. 75—Iron stock. Length, 4 in. Cutter, 1 in. Weight each, 1 lb. Each, $1.20

No. 90—Nickel plated. Length, 4 in. Cutter, 1 in. Weight each, 1½ lbs. Each, $6.60

CARRIAGE MAKERS' RABBET

No. 10½—Length, 9 in. Cutter, 2⅛ in. Weight each, 4¼ lbs. Each, $8.30

No. 10—Length, 13 in. Cutter, 2⅛ in. Weight each, 5½ lbs. Each, 9.90

IMPROVED RABBET

No. 190—With Spur. Length, 8 in. Cutter, 1¼ in. Weight each, 3¼ lbs. Each, $3.80

No. 191—With Spur. Length, 8 in. Cutter, 1¼ in. Weight each, 3 lbs. Each, 3.80

DUPLEX RABBET PLANE AND FILLETSTER

No. 78—Iron stock and fence. Length, 8½ in. Cutter, 1½ in. Weight each, 4 lbs. Each, $4.60

Remove the arm to which the fence is secured, and a handled rabbet plane is had; and with two seats for the cutter, so that the tool can be used as a bull-nose rabbet if required.

The construction of the stock is such that the plane will lie perfectly flat on either side, and can be used with right or left hand equally well while planing into corners or up against perpendicular surfaces.

The arm to which the fence is secured can be screwed into either side of the stock, thus making a superior right or left-hand filletster, with adjustable spur and depth gauge.

CABINET-MAKERS' EDGE PLANE

No. 97—Length, 10 in. Cutter, 2⅛ in. Weight each, 3¾ lbs. Each, $6.60

For plane-makers and cabinet-workers. It has a cutter resting on a solid bed practically its entire length. The cutting edge being located at the extreme end of the plane gives the tool the form of a chisel. No other plane can be worked in such a small space or so close up into corners. The cutter is adjustable endwise.

IMPROVED SCRUB PLANE

No. 40—Iron stock. Length, 9 in. Cutter, 1⅜ in. Weight each, 3 lbs. Each, $3.30

This tool has a single iron, with the cutting edge rounded; and is particulary adapted for roughing down work before using a jack or other plane.

LOW ANGLE JACK PLANE

No. 62—Length, 14 in. Cutter, 2 in. Weight each, 5 lbs. Each, $8.60

This plane is especially adapted for use in cutting across the grain on heavy work, where more power is required than can be obtained by the use of the ordinary block plane. The plane is fitted with patent adjustable throat, which enables the user to work equally well on hard or soft wood.

CIRCULAR PLANES

Stanley

No. 113—Adjustable japanned. Length, 10 in. Cutter, 1⅝ in. Weight each, 4 lbs. Each, $9.90

This plane has a flexible steel face, which can be easily shaped to any required arc, either concave or convex, by turning the knob on the front of the plane.

No. 20½—Victor, Japanned. Length, 10 in. Cutter, 1⅝ in. Weight each, 5 lbs. Each, $10.50

The flexible steel face of this plane can be made concave or convex, by turning the screw which is attached to its center.

All above one in a box.

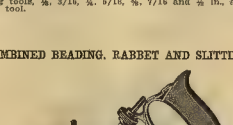
STANLEY PLANES

PLOW, BEADING AND MATCHING PLANE

No. 50—9¼ in. Nickel plated. Fifteen Cutters. Weight, 4 lbs. ..... Each, $12.50

A handy tool for light work. Consists of main stock, carrying a spur and depth gauge and forming a support for one side of the cutter, and a fence with a 2-inch adjustment. The cutters consist of 7 plow and dado bits, ¼, 5/16, ⅜, 7/16, ½, ⅝ and ¾; 7 beading tools, ⅛, 3/16, ¼, 5/16, ⅜, 7/16 and ½ in., and ¼-in. tonguing tool.

COMBINED BEADING, RABBET AND SLITTING



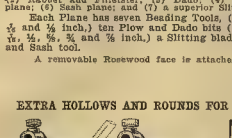
No. 45—Nickel plated, with twenty tools, bits, etc. Weight each, 10¼ lbs. ..... Each, $22.00

This plane embraces (1) Beading and Center Beading plane; (2) Rabbet and Filletster; (3) Dado; (4) Plow; (5) Matching plane; (6) Sash plane; and (7) a superior Slitting plane.

Each Plane has seven Beading Tools, (⅛, ³⁄₁₆, ¼, ⁵⁄₁₆, ⅜, 7/16 and ½ inch,) ten Plow and Dado bits (⅛, ³⁄₁₆, ¼, ⁵⁄₁₆, ⅜, ⁷⁄₁₆, ½, ⅝, ¾ and ⅞ inch,) a Slitting blade, a Tonguing tool and Sash tool.

A removable Rosewood face is attached to the fence.

EXTRA HOLLOWS AND ROUNDS FOR No. 45 PLANE

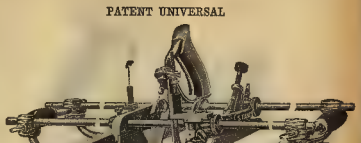


No. 44—⅝-in. round cutters, 1-in. circle ..... Per pair, $3.30
No. 45—⅝-in. round cutters, 1¼-in. circle ..... " " 3.30
No. 47—1-in. round cutters, 1¼-in. circle ..... " " 3.60
No. 54—⅝-in. hollow cutters, 1-in. circle ..... " " 3.30
No. 55—¾-in. hollow cutters, 1¼-in. circle . ..... " " 3.30
No. 57—1-in. hollow cutters, 1¼-in. circle ... .. " " 3.60

A pair constitutes one Round and one Hollow.

The Hollow and its Cutters will form a Round on the moulding being worked. A Round and its Cutters form a Hollow These are specially formed bottoms, which are substituted for the sliding section for No. 45 plane.

PATENT UNIVERSAL

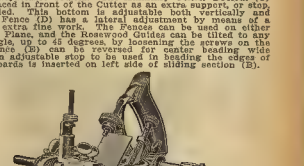


This Tool in the hands of an ordinary carpenter, can be used for all lines of work covered by a full assortment of so-called Fancy Planes.

Nickel Plated

No. 55—Stanley's Universal Plane, with 52 tools, bits, etc. Weight each, 18 lbs. ..... Each, $42.00

This Plane consists of a Main Stock (A) with two sets of Transverse Sliding Arms, a Depth Gauge (F) adjusted by a screw and a Slitting Cutter with stop, a Sliding section (B) with a vertically adjustable bottom. The Auxiliary Center Bottom (C) is to be placed in front of the Cutter as an extra support, or stop, when needed. This bottom is adjustable both vertically and laterally. Fence (D) has a lateral adjustment by means of a screw, for extra fine work. The Fences can be used on either side of the Plane, and the Rosewood Guides can be tilted to any desired angle, up to 45 degrees, by loosening the screws on the face. Fence (D) can be reversed for center beading wide boards. An adjustable stop to be used in beading the edges of matched boards is inserted on left side of sliding section (B).



As a Moulding Plane.

As a Chamfer Plane

DIRECTIONS.

MOULDING PLANE—Insert the desired Cutter, and adjust bottom of Sliding Section (B) to conform to the shape of the Cutter; then, fasten this Section firmly by means of the checknuts on the transverse arms. When needed, adjust Auxiliary Center Bottom (C) for an additional support in front of the Cutter. By tilting the rosewood guides on Fences (D and E), mouldings of various angles may be formed.

MATCH, SASH, BEADING, REEDING, FLUTING, HOLLOW, ROUND, PLOW, RABBET AND FILLETTER PLANE—Use in same manner as for Mouldings. In working Match and Sash Cutters, the Auxiliary Center Bottom (C) may be used as a step.

DADO—Remove the Fences (D and E) and set the spurs parallel with the edges of Cutter. Insert long Adjustable Stop on left hand side of Sliding Section.

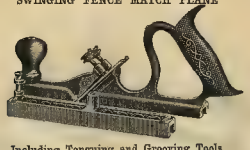
SLITTING PLANE—Insert the Cutter and Stop on right-hand side of Main Stock and use Fences (D and E) for guide.

CHAMFER—Insert the desired Cutter; fasten a Fence on each side of the Plane and tilt the rosewood guides to the desired angle.

SEATTLE HARDWARE COMPANY

STANLEY PLANES

SWINGING FENCE MATCH PLANE



Including Tonguing and Grooving Tools.

No. 48—Iron stock and fence, cuts 5/16 inch groove on ¾ to 1¼ in. boards. Weight each, 3¼ lbs.....Each, $8.30

The plane has two separate cutters, a suitable distance apart. When the guide, or fence, is set as shown, both cutters work and a tongue can be made. This fence is hung on a pivot, and can be swung around, end for end. This movement covers one of the cutters, and also furnishes a guide for grooving an exact match for the tongue

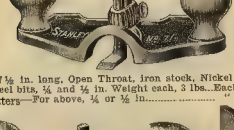
PLOW, FILLETSTER, DADO AND MATCH PLANE

Including Plow Bits, Slitting and Tonguing Tools

No. 46—10½ in. long, Nickel Plated, with eleven tools, bits, etc. Weight each, 6¼ lbs.....Each, $15.00

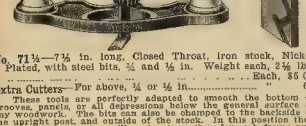
This tool is accompanied by eight plow and dado bits (3/16, ¼, 5/16, ⅜, ½, ⅝, ¾ and 1¼ in.) a filletsten cutter, a slitting tool and a tonguing tool. All except the slitting blade are secured in the main stock on a skew

WOODWORKERS' ROUTERS



No. 71—7⅛ in. long, Open Throat, iron stock, Nickel Plated, with steel bits, ⅛ and ⅛ in. Weight each, 3 lbs...Each, $6.20

Extra Cutters—For above, ¼ or ½ in..... " .60



No. 71½—7⅛ in. long, Closed Throat, iron stock, Nickel Plated, with steel bits, ¼ and ½ in. Weight each, 2½ lbs. ..... Each, $5 00

Extra Cutters—For above, ¼ or ½ in..... " 60

These tools are perfectly adapted to smooth the bottom of grooves, panels, or all depressions below the general surface of any woodwork. The bits can also be changed to the backside of the upright post, and outside of the stock. In this position they will plane into corners, will rout out mortises for sash-frame pulleys, or will smooth surfaces not easily reached with any other tool.

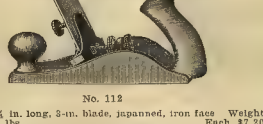
DOOR TRIM PLANE

No. 171—11 in. long, 3 Cutters (⅜, ⅝ and ⅞ in.). Weight each, 3½ lbs.....Each, $8.30

Will make mortises for butts, face plates, strike plates, escutcheons, etc., up to a depth of 5/16 and a width of 3 inches. The cutter can be instantly set to work from either end of the plane or across it. The cutter is cushioned by a spring which prevents taking a heavier chip than can be easily carried. By removing the fence it can be used as a router. An extra wooden bottom of any size can be screwed on, enabling the user to router on larger openings.

ADJUSTABLE VENEER

No. 12



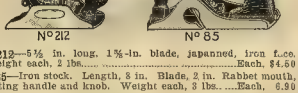
No. 112

No. 12—6¼ in. long, 3-in. blade, japanned, iron face Weight each, 4½ lbs.....Each, $7.20

No. 12½—6¼ in long, 3-in, blade, japanned, rosewood face. Weight each, 4½ lbs.....Each, 9.60

No. 112—9 in. long, 3-in. blade, japanned, iron face. Weight each, 4½ lbs.....Each, 6 30

Extra Blades—For Nos 12 and 112 (22, 28 or 32 teeth to the inch).....Each, .80



No. 212—5½ in. long, 1⅝-in. blade, japanned, iron face. Weight each, 2 lbs.....Each, $4.50

No. 85—Iron stock. Length, 8 in. Blade, 2 in. Rabbet mouth, tilting handle and knob. Weight each, 3 lbs.....Each, 6.30

Extra Blades—For No. 212 ..... " .80

The No. 12 and 112 scraper planes are used for scraping and finishing veneers or cabinet work. It can be used equally well as a touch plane, and will do excellent work in scraping off old paint and glue. With each plane is furnished a scraper blade, but an extra charge is made for each toothing cutter. No. 212 is a small scraper for fine work, such as violin-making and fine cabinet work.

All above one in a box.

FLOOR AND CABINET SCRAPERS

IRON FACE CABINET

The Blades may be Sprung to a Slight Curve, by Tightening the Thumb Screw, which is of advantage in some places

	Per Dozen
No. 80—3⅝ in. Tempered Tool Steel Blade; Length Over-All 11 in.; Japanned Cast Iron Frame; Raised Handles	$12.00

Beveled Edge Steel Blade, 16 Gauge; Beechwood Curved Handle, Varnished Top and Bottom, with Thumb Screw

	Per Dozen
No. 2—Length Over-All 13¼ in.; 3x3 in. Blade	$4.50

Half Dozen in a Box; Weight per Dozen 9 Lbs.

Extra Blades—3x3 in., for No. 2 Scraper	2.25

Weight per Dozen About 2 Lbs.

ATKINS' PERFECTION

Malleable Iron Frame and Polished Nickel Plated Cross Bar; Adjustable, 18 Gauge, Silver Steel Blade, Highly Tempered, 4 Edges Sharpened; Polished Hardwood Handle, Brass Ferrule.

	Per Dozen
No. AP—11¾ in. Long; 2x3 in. Blade	$10.00

Half Dozen in a Box; Weight per Dozen 11 Lbs

Extra Blades—2x3 in., Silver Steel, Beveled	2.20

Weight per Dozen About 2 Lbs.

STEARNS

No Vibration; No Wavy Effects on the Floor

Intended for Use on Large Surfaces. The Knife Scrapes the Floor when the Machine is Drawn Towards the Operator: Will Work up to the Wall and Into the Corners. Knife is Firmly Clamped and Screwed Into the Scraper

	Each
No. 10—Cast Iron Frame, Aluminum Finish; Best Tool Steel Knife, 6 in. Wide, Tempered; Hardwood Handle 38½ in. Long; Rubber Tired Wheels 5 in. in Diameter	$36.00

One in a Case; Weight 100 Lbs.

STARRETT'S UNIVERSAL

All Edges Ground Square and Sharpened giving Eight Scraping Surfaces. By a Turn the Ball Joint is Frictionally Locked or Released, Bringing into use Any One of the Four Sides of Blades. The Hand Grip can be Slipped Off and On Instantly.

	Per Dozen
No. 194—3x4¼ in. Polished Steel Blade; 10 in. Handle; Rosewood Handle and Grip; Steel Ball Joint	$12.00

One in a Box; Weight per Dozen About 15 Lbs.

Extra Blades; Weight per Dozen About 2¾ Lbs.	1.80

Half Dozen in a Package

DIKEMAN

Polished, Ball and Socket Connection; Perfection Steel Hand Rest; Wood Handles Adjustable, 16 Gauge, Tempered Steel Blade.

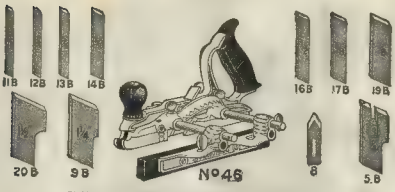
The Perfection Hand Rest provides a natural means for carrying tool back and forth and being near the Cutting Edge of blade which is rigidly held between Steel Plates prevents Chattering

	Per Dozen
No. 125—11 in. Long; 3x5 in. Blade	$15.00

One in a Box; Weight per Dozen About 26 Lbs.

FANCY PLANES

STANLEY RULE AND LEVEL CO.



PLOW, DADO, FILLETSTER AND MATCHING PLANES

Nickel Plated Frame; Rosewood Handle and Knob

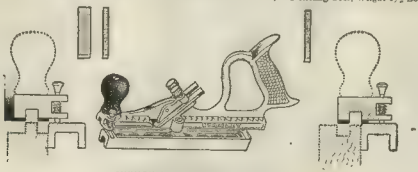
Each

No. 46—Length 10½ in., with Eight Plow and Dado Bits, 3/16, ¼, 5/16, 3/8, ½, 5/8, ¾, 1 and 1¼ in.; One Filletster Cutter, One Slitting Blade and Tonguing Tool; All (except the Slitting Blade) are Secured in the Main Stock and Set Askew; Weight, 5½ Lbs. $5 00

DADO PLANES

Each

No. 47—Same Stock as No. 46, but Used as a Dado Only; With Bits 5/16, ½, 5/8, ¾ and 1 in., and Slitting Tool, Weight 5½ Lbs. $4 00



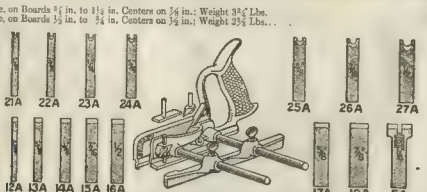
SWINGING FENCE MATCH PLANES

Iron Stock, Nickel Plated, Rosewood Knobs

This Form has Two Plow Cutters of the same width, and One Extra Wide Cutter. The Fence in One Setting Exposes Two Cutters for Cutting the Tongue, and, when reversed leaves only one exposed for Cutting the Grooves. On Thicker Boards than the Plane Works on Center, the Extra Wide Cutter is substituted for Groove Cutter when Cutting Tongue.

Each

No. 48—Cuts 3/8 Groove, on Boards ⅜ in. to 1½ in. Centers on 3/4 in.; Weight 3⅜ Lbs. $2 75
No. 49—Cuts 3/8 Groove, on Boards ½ in. to ¾ in. Centers on ½ in.; Weight 2¾ Lbs. . . 2 75



PLOW, BEADING AND MATCHING PLANE

This is a Very Handy Tool for Light Work. It Consists of a Main Stock, Carrying a Spur, a Beading Gauge and a Depth Gauge, and Forming a Support for One Side of the Cutter, a Sliding Section, Carrying a Spur and Forming a Support for the Other Side of the Cutter, and a Fence with a 5 in. Adjustment. The Handle is Metal, being a Part of the Main Stock.

The Cutters comprise 7 Plow and Dado Bits, ¼, 5/16, 3/8, ½, 5/8 and ¾ in.; 7 Beading Tools, 1/8, 3/16, ¼, 5/16, 3/8, 7/16 and ½ in.; and a ¾ in. Tonguing Tool.

Each

No. 50—9¼ in. Long, Nickel Plated, 15 Cutters; Weight 3½ Lbs. $5 00

CURVE RABBET PLANES

Will Cut Rabbets on Circular or Other Curved and Irregular Edges

	Each
No. 196—9 in. Long; Nickel Plated; Weight, 3 Lbs.	$4.00

FANCY PLANES

STANLEY RULE AND LEVEL CO.

IRON DADO PLANES

The great advantage of these Dado Planes over those made of wood is that they will keep True under all Conditions even in the Narrowest Widths. They have Skew Cutters, an Adjustable Depth Gauge, and Two Adjustable Spurs, One on Each Side of the Plane. This Adjustable feature permits of the Spurs being adjusted to take up wear, as well as for the depth of the cut.

The Plane is made in Seven Sizes from ¼ in. to 1 in. in Width. In Ordering, Always Give the Number (39) and Width of Cutter desired. Extra Cutters, $0.20 Each.

	Each
No. 39A—8 in. Long; ¼ in. Cutter; Weight 1¾ Lbs.	$1 65
No. 39B—8 in. Long; ⅜ in. Cutter; Weight 2 Lbs.	1 65
No. 39C—8 in. Long; ½ in. Cutter; Weight 2 Lbs.	1 65
No. 39D—8 in. Long; ⅝ in. Cutter; Weight 2¼ Lbs.	1.65

DADO PLANE

This Plane has an Extra Narrow Cutter, only 1/8 of an inch Wide, making it an Ideal Tool for Blind Wire Grooving as well as for many other purposes.

It is fitted with a Double Spur, which Prevents Splintering when Working Across the Grain and Insures a Smooth, Clean Cut.

A Depth Gauge is also attached allowing a Groove to be Cut of Any Desired Depth up to the Limit of the Plane—½ of an inch. This Plane will be of special interest to Electricians. Each

No. 238—7½ in. Long, ⅝ in. Cutter; Weight 1 Lb. $2.20

HANDLED IRON RABBET PLANES

These Planes will Lie Perfectly Flat on Either Side and Can be Used Equally as well with Right or Left Hand while Planing Into Corners or up Against Perpendicular Surfaces.

Made in Two Styles, One Fitted with a Spur which Permits them to be Used for Working across the Grain, and the Other Without a Spur. Both Styles are Fitted with a Detachable Depth Gauge.

	Each
No. 190—8 in. Long; 1¼ in. Cutter; Japanned; With Spur; Weight 2½ Lbs.	$1.25
No. 191—8 in. Long, 1¼ in. Cutter; Japanned; With Spur; Weight 2½ Lbs.	1.35
No. 192—8 in. Long, 1 in. Cutter; Japanned, With Spur; Weight 2 Lbs.	1.25

RABBET AND FILLETSTER PLANES

The Sides and Bottom being Square with each other, the Plane will Lie Perfectly Flat on Either Side.

It has an Adjustable Fence which Slides Under the Bottom, Regulating the Width of the Cut.

It is Fitted with Two Spurs, One on Each Side, for Working Across the Grain—Also an Adjustable Depth Gauge.

As both the Fence and the Depth Gauge can be Attached to Either Side, the Plane is Suitable for Either Right or Left Hand Work.

The Front Part of the Plane can be Easily Detached, thus Providing a Bull Nose Plane for Working Close up into Corners or Other Difficult Places.

The Cutter is Adjustable Endwise. Each

No. 278—6¾ in., Width of Cutter 1 in., Weight Each about 2 Lbs $1.75
One in a Box

No. 98

SIDE RABBET

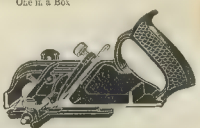
A Convenient Tool for Side-Rabbeting and Trimming Dados Mouldings and Grooves of all sorts. A reversible nose piece will give the tool a form by which it will work closet up into corners when required; Nickel Plated; Rosewood Knob.

	Each
No. 98—Right Hand; 4 in. Long; ⅜ in. Cutter; Weight ½ Lb.	$1 00
No. 99—Left Hand; 4 in. Long; ½ in. Cutter; Weight ½ Lb.	1 00

SKEW CUTTER FILLETSTER AND RABBET PLANE

Each

No. 289—8¼ in. Long; 1¾ in. Cutter; Japanned; Weight 3¾ Lbs. $1.75



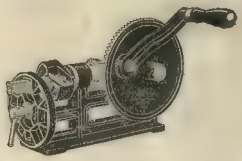
No. 78

DUPLEX, FILLETSTER AND RABBET PLANE

This Plane has Two Seats for the Cutter One for Regular Work and the other where a Bull Nose is required. It has a Spur and a Removable Depth Gauge. The Adjustable Fence can be used on Either Side and Slides Under the Bottom Regulating the Width of the Cut. To work same as a Rabbet Plane Remove Fence and Arms. Each

No. 78—8¼ in. Long; 1¼ in. Cutter; Japanned; Weight 3 Lbs. $1.65

DOWEL AND ROD TURNING MACHINES



STANLEY

A Tool that will appeal to Cabinet Makers, Pattern Makers, Furniture Manufacturers and especially to Supervisors and Instructors of Industrial Education

It will not only Cut Dowels of Varying Sizes and Lengths to Perfect Dimensions, but with it one can also Form Rods of Practically Any Length. Designed to be operated by Hand, the crank can be adjusted for a long or short throw, giving power or speed to the machine as desired.

Each

No. 77—Complete with One Cutter Only, for Making Dowels or Rods ⅜ in. in Diameter..... $8.50

EXTRA CUTTERS

These Cutters are Adjustable so that the Dowels or Rods can be made for a Tight or Loose Fit.

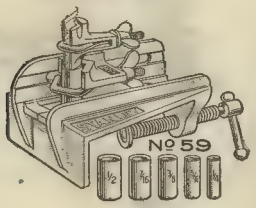
Size, In.	¼	⅜	½	⅝	¾	⅞	1	1⅛	1¼
Each	$0.80	.80	.80	.80	.80	.80	.80	.80	.80

DOWELING JIGS



STANLEY

For Boring Dowel Holes in the Edge, End or Surface of Wood with Ease and Accuracy; Also an Excellent Bit Guide for Mortising. Will Take Any Thickness of Material Up to Three Inches

When Making Dowel Holes with only a Brace and Bit it is also Necessary to Use a Square to insure the Holes being Bored Perpendicular to the Edge of the Stock, and even then more than ordinary skill is required to produce perfect work. With the Doweling Jig the Steel Guide is Automatically Set to Go by the Bit Properly when the Jig is Clamped to the Work.

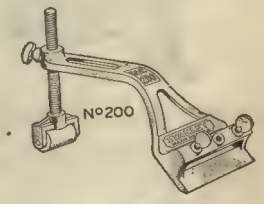
If Drill Bits are Used there will be No Danger of Boring Out of Line even in Cross-Grain Wood or Through Knots, and the Use of Drill Bits is Recommended for Quick and Accurate Work; However, Excellent Work can be Done with the Ordinary Worm Bits if Care is Taken to see that they fit closely in the guides.

To Allow for Variation in Size of Bits the Guides are Made 1/100 in. Larger than the Sizes Given.

Each

No. 59—Made Entirely of Metal, Nickel Plated, Working Parts Milled True; Jig Complete with Five Steel Guides 1¼ in. Long. One Each ¼, ⅜, ½, ⅝ and ¾ in.....$1.75
One in a Box

CUTTER AND CHISEL GRINDER



STANLEY

For Holding Plane Irons, Chisels and Other Similar Cutting Tools that they may be Ground and Honed to Any Desired Angle or Bevel Insuring an Accuracy that is very difficult to obtain when the tool is held in the hand.

Each

No. 200—Made Entirely of Metal All Parts Nickel Plated . $0.90

IRON PLANES

SCRAPER PLANES

Cast Iron Frame, Polished Face and Outsides; Japanned Inside; Brass Adjusting Screw; 11 in. Rosewood Handle.

Each

No. 12—Iron Face, 6¾ in. Long; 3 in. Blade. $2.40

Weight 3¾ Lbs.

CABINET MAKERS' SCRAPER PLANES

When in use the blade rests against the front edge of the mouth under a slight pressure. In working, the blade springs backward, opening the mouth and allowing the shaving to pass through it. As soon as working pressure is released the blade springs back to its normal position. Made in two styles, one, a Rabbet Scraper with handle and knob pivoted, to allow tilting for convenience when working into corners or up against perpendicular surfaces, and the other, without a Rabbet Mouth and with Stationary Handle and Knob. Handles and Knobs of Rosewood.

Each

No. 85—8 in. Long, 2 in. Blade; Rabbet Mouth; Tilting Handle and Knob; Weight 2¾ Lbs. $2.30

FLOOR PLANE

For Planing Floors, Bowling Alleys, Skating Rinks, Decks of Vessels, etc.

Polished Face, Japanned Body; Nickel Plated Knob and Lever Screw, Steam Bent Wood Handle Adjustable to Any Angle.

Each

No. 74—23¼ in. Cut; Handle 45 in., Weight 10 Lbs. ..... $4.

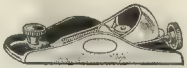
IRON BLOCK PLANES

STANLEY RULE AND LEVEL CO.

Cast Iron Frames and Caps, Machined and Polished Faces and Sides, Japanned Inside; Brass Adjusting Screw; Tool Steel Cutters, Tempered, Ground and Polished. Throat Can be Quickly Opened for Coarse or Fine Work. Made with the "Handy" features which gives the Workman a more Secure Grip on the Tool than is possible with any other design.

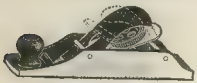
REGULAR
Japanned Trimmings

	Each
No. 9½—6 in. Long, 1⅝ in. Cut; Weight 1¾ Lbs.	$1.10
No. 15—7 in. Long, 1⅝ in. Cut; Weight 1⅝ Lbs.	1 20
Nickel Plated Trimmings	
No. 16—6 in. Long, 1⅝ in. Cut; Weight 1½ Lbs.	1 25
No 17—7 in. Long, 1⅝ in. Cut; Weight 1⅝ Lbs.	1.35



LOW ANGLE
Nickel Plated Trimmings

	Each
No. 60—6 in Long; 1⅝ in. Cut; Weight 1¾ Lbs.	$1 25
No. 65—7 in. Long; 1⅝ in. Cut; Weight 1⅝ Lbs.	1 35



DOUBLE END, NON-ADJUSTABLE

	Each
No. 130—8 in. Long; 1⅝ in. Cut; Weight 1⅝ Lbs.	$0 75

Has Two Slots and a Movable Cutter Seat. To Use in Corners as a Bull Nose Plane, Remove Cap and Cutter and Reverse the Cutter Seat as indicated in Cut.

DOUBLE END, ADJUSTABLE

	Each
No. 131—8 in. Long; 1⅝ in. Cut; Weight 1⅝ Lbs.	$1.50

No 140

RABBET AND BLOCK

Detachable Side changes this Tool from a Block Plane to a Rabbet Plane or vice versa. Cutter is set obliquely.

	Each
No. 140—Nickle Plated; Length 7 in., 1⅝ in. Cutter; Weight 1½ Lbs.	$1 40

TOY SIZE

	Each
No. 100—3½ in. Long; 1 in. Cut; Weight ⅝ Lb.	$0.25

NON-ADJUSTABLE

	Each
No. 102—3½ in. Long; 1⅝ in. Cut; Weight ⅞ Lb.	$0 40

ADJUSTABLE

	Each
No. 103—5½ in. Long; 1⅝ in. Cut; Weight ⅞ Lbs.	$0.55

LOW ANGLE
Japan Trimmings

	Each
No. 61—6 in. Long; 1⅝ in. Cut; Weight 1¾ Lbs.	$1.10

KNUCKLE JOINT
Nickel Plated Trimmings

	Each
No. 18—6 in. Long; 1⅝ in. Cut; Weight 1½ Lbs.	$1.30
No. 19—7 in. Long; 1⅝ in. Cut; Weight 1⅝ Lbs.	1.40

Japanned Trimmings; Rosewood Handle

	Each
No. 9¾—6 in. Long; 1⅝ in. Cut; Weight 1⅝ Lbs.	$1.30

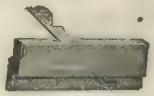
FANCY WOOD PLANES

Beechwood Body, Cutters Forged from Tool Steel, Tempered and Polished; All Parts Perfectly Fitted.

OGEE

No. 59—Common

Size, In.	⅜	½	⅞	1	1⅛	1½
Each	$0.60	.65	.65	.65	.65	.65



BOARD MATCH

No. 75—Tonguing or Grooving

Size, In.	¾	½	⅝	¾	⅞	1
Each	$0.75	.75	.75	.75	.75	.75

Tonguing Plane cuts Tongue; Grooving Plane plows Groove; Spe- cify which

CLOSING STEP PLANES

No. 90—With One Iron

Size, In.	¾	1¼	1⅜	1½	1¾	2
Each	$0.80	.80	1.00	1.00	1.25	1.25

No. 91—With Two Irons

Size, In.	¾	1¼	1⅜	1½	1¾	2
Each	$1.10	1.10	1.20	1.20	1.50	1.50

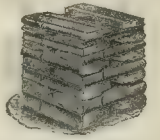
RABBET PLANES

No. 116—Skew Rabbet

Size, In.	½	⅝	¾	⅞	1	1¼	1½	1¾	2
Each	$0.60	.60	.60	.60	.60	.65	.70	.80	.90

No. 119—Skew Rabbet, with Handle and Two Cutters

Size, In.	1½	1¾	2
Each	$1.70	1.70	1.70



No. 72—HOLLOWS AND ROUNDS

In ordering Half Pairs of Hollows and Rounds, be careful to give Number of Plane and Whether Hollow or Round. Hollows leave the Wood Round; Rounds leave the Wood Hollow. They are used for Rounding Corners and Smoothing Hollows.

	In Sets	Per Set
Set of 9 Pairs, Nos. 1 to 9		$9.45
	In Pairs	Per Pair
Nos. 1 to 6		$1.00
Nos. 7 to 9		1.15

Size Circle Worked, In.	½	⅝	1	1¼	1½	1⅝	2	2¼	2½

PANEL PLOWS

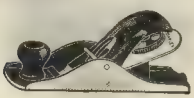
Adjustable, Complete with Eight Irons. Used for Grooving for Different Thicknesses of Panels

	Each
No. 95½—Handled, with 8 Cutters, One Each ⅛, ⅜, ¼, ⅜, ½, ⅝, ¾ and ⅞ In.	$6.50

IRON BLOCK PLANES

STANLEY RULE AND LEVEL CO.

Cast Iron Frames and Caps; Machined and Polished Faces and Sides; Japanned Inside; Brass Adjusting Screw; Tool Steel Cutters, Tempered, Ground and Polished; Throat can be Quickly Opened or Closed for Coarse or Fine Work. Made with the "Handy" feature which gives the Workman a more Secure Grip on the Tool than is possible with any other design.



NON-ADJUSTABLE

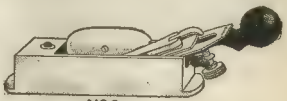
	Each
No. 110—7½ in. Long; 1⅝ in. Cut; Weight 1¾ Lbs	$0.55

SCREW ADJUSTMENT

	Each
No. 220—7½ in. Long, 1⅝ in. Cut, Weight 1½ Lbs.	$0.75

Especially Adapted for use in Cutting Across the Grain on Heavy Work, where more power is required than can be obtained by the use of the ordinary Block Plane.
Japanned Trimmings, Rosewood Handle and Knob.

	Each
No. 62—14 in. Long; 2 in. Cut; Weight 3½ Lbs.	$2.85



N° 9

CABINET MAKERS'

Has Metallic Handle with Slot and Set-Screw which can be attached to the Top of the Plane, on either edge, for working on a shooting board, for Planing Mitres, etc.
Rosewood Knob.

	Each
No. 9—10 in. Long, 2 in. Cutter; Weight 4½ Lbs.	$4.10

EDGE TRIMMING PLANES

For Trimming or Smoothing Ends of Boards such as Siding, etc.

	Each
No. 95—Japanned; 6 in. Long, ⅞ in. Cutter; Weight 1¼ Lbs.	$1 15

BULL NOSE RABBET

For Close Work in Corners, etc. The Mouth Opens or Closes with a Screw in Upper Section of Stock.

	Each
No. 78—4 in. Long; 1 in. Cutter; Weight 2¼ Lbs.	$0 40
All Above, One in a Box	

STANLEY BUTCHERS' BLOCK PLANE

The Plane illustrated above is Designed Especially for Truing up or Resurfacing Butchers' Blocks.
With its Use Blocks having the Most Uneven Surfaces Can be Leveled up with More Speed and Greater Satisfaction than can be Obtained with the Use of Any Other Tool.
The Plane has been Thoroughly Tested on this Work and has been referred to by those interested as fulfilling a long felt want.
The Work is Accomplished with a Specially Formed Cutter or Plane Iron Set at an Exceptionally Low Angle.
In addition to the Special Cutter Mentioned, a Regular Plane Iron is Furnished which will Enable the User to Finish Smooth the Final Surface of a Block, also for Planing Smooth and Keeping in Condition the Meat Benches and Tables Ordinarily Found in a Butcher's Establishment.

	Each
No. 84—12½ in. Long, 2 in. Cutters; Weight 4 Lbs.	$2 40

SHEET METAL WORKING TOOLS AND MACHINES.

PEXTO

P. S. & W. CO.

MANUAL TRAINING EQUIPMENT.

He Can Do It, If You Start Him Right!

WE all know the subject of sheet metal working takes care of itself. Boys look forward to it with pleasure and to many of them it is their first opportunity to run a machine. Sheet metal working has many attractive features and boys find it a very interesting kind of shop work. It is easy to connect home interest with the school shop by making repair work a part of the course. Kitchen utensils, pans, sugar scoops, funnels, dust pans, bread and cake boxes and the re pair of gutters and down spouts are interesting projects. Sheet Metal Work develops a facility in the handling of a variety of hand tools A larger number of light machines and tools are used than in any other branch of metal work. Since the machines are hand operated they are entirely under the control of the boy and not in any sense automatic as some machines are. The mind of the boy must be on his work and a corresponding mental development results from this concentration.

Sheet Metal Work is a large and growing industry. It is intimately connected with the building trades and an increasing proportion of the costs of building are spent for cornice work, roofing, skylights, ornamental ceilings, ventilating, heating, etc. The rapid growth of the automobile industry requires the labor of thousands of men on bodies and radiators and the invention of sheet metal boats and a large line of metal furniture are opening up new fields every day The sheet metal working trades offer unusual opportunities to young men who possess the necessary training — to-day more than ever The work is not confining, not unhealthful and not dangerous. As a trade it has increased in importance from year to year and the introduction of machinery has had much less effect on it than on the work of the moulder, the blacksmith, or the printer

For almost a century Pexto Sheet Metal Working Tools and Machines have been foremost on the American Market—no other tools and machines are as good Good tools are as essential for the untrained boy as for the expert. In Manual Training Work nothing but poor tools will serve to discourage enthusiastic, ambitious boys.

SHEET METAL WORKING EQUIPMENT FOR TRADE SCHOOLS

is not unduly expensive and may be made as extensive as one desires to make it. A set of hand machines and a few each of the different small tools will do to carry the work in a class of fifteen to twenty pupils. There is not the same need for individual outfits in sheet metal working as in wood work as the tools can be used in general by all members of the class The following list may be helpful to those who are about to add sheet metal to the course of study in the elementary work·

1 Hold-All Revolving Machine Standard No. 969.
1 Small Turning Machine No. 541, without Standard.
1 Pair No. 5 Elbow Edging Rolls for ditto.
1 Wiring Machine No. 526, without Standard.
1 Large Burring Machine No. 580, without Standard.
1 Setting Down Machine No. 561, without Standard.
1 Beading Machine with four pairs Beading Rolls, without Standard.
1 Pair Straight Crimping Rolls for ditto.

All Machines itemized above fit into the Hold-All Revolving Machine Standard occupying floor space of only 30 inches diameter.

1 Squaring Shears No. 159.
1 Adjustable Bar Folder No. 63.
1 Forming Machine No. 383.
1 Grooving Machine No. 518.
2 Beach Plates No. 982.
1 Hollow Mandrel Stake No. 910.
1 Mandrel Stake No. 902.
1 Blowhorn Stake No. 925.
1 Double Seaming Stake No. 922.
1 Candlemould Stake No. 956.
1 Hatchet Stake No. 944.
1 Round Head Stake No. 965
3 Gas Furnaces No. 794.
3 Pairs Soldering Coppers. 3 lbs
6 Soldering Copper Handles.
1 Vise No. P-704
1 Hand Punch No. 790
1 Pair Bench Shears No. 4

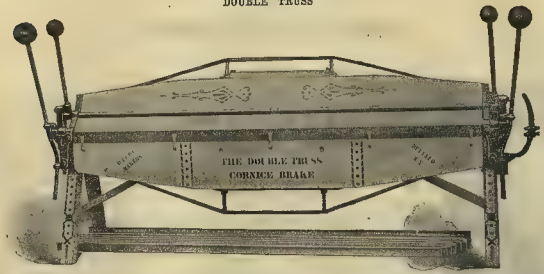
SMALL TOOLS.

Setting Hammers No. 3.
Riveting Hammers No. 3
Raising Hammers No. 3.
Rivet Sets No 46, sizes 2, 4, 6.
Prick Punches
Solid Punches Nos. 4, 6, 8
Hollow Punches ⅛, ⅜, ¾, ⅞ inch.
Straight Snips, P S. W 1819 Original No. 9.
Circular Snips, P. S. W. Original No. 9.
Scratch Awls No. 01.
Circumference Rules No. 101.
Wire Chisels, ⅛ inch.
Lantern Chisels, ½ x 5½ inches.
Hand Groovers Nos. 2, 4, 6.

TINNERS' TOOLS

CORNICE BRAKES

DOUBLE TRUSS



*No. 8—Bending Edge 8 ft. 1 in. Long, ⅛ in. Wide Will form No. 22 Gauge Full Length. Weight each, 1025 lbs. Ea., $155.00

*No. 18—Bending Edge 8 ft. 1 in. Long, ⅛ in. Wide. Will form No. 16 Gauge Full Length. Weight each, 1225 lbs. Ea., $175.00

The above Brakes are operated by hand power on the same principle, and do the same work, both in quality and quantity, as the all-metal machines. The material to be formed is clamped between the upper and lower jaws and bent by the front or bending leaf to the desired angle. Curves are formed by bending the material over half-round formers attached to the front leaf. Both the mechanism and material of which these Brakes are constructed are entirely different from the all-metal machines. They are the most simply constructed cornice brakes manufactured. They are strong, durable, easily operated, and have no spring or complicated parts to get out of order, and many valuable features not found in any other brake on the market. They are especially valuable to contractors, owing to the fact thatt hey are all portable, being easily and cheaply transported to any place where they may be useful, enabling the contractor to have the brake close to the building in course of construction, and have the work formed up right on the premises, which saves a large amount of freight and expense of handling formed-up work and the risk of damage in transit.

These Brakes will bend or form sheet metal to almost any angle or curve, or any combination of angles or curves; not only on the edge of the material, but at any distance from the edge, either crosswise or lengthwise of the sheet, which cannot be done with any other machine or combination of machines.

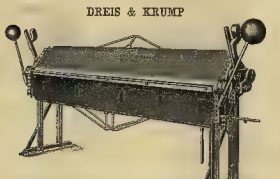
We recommend them to Sheet Metal Contractors, Tinsmiths, Jobbers, Furnace Men, Refrigerator and Trunk Manufacturers, Stove and Range Makers, Railroad Shops, etc.

*Not carried in stock. Lists are f. o. b. factory.

TINNERS' TOOLS

HAND BENDING BRAKES

DREIS & KRUMP



Chicago Steel

Construction—Made of steel throughout. Strong, rigid. Light steel castings and drop forgings are used for hinges and other parts where there is a strain. Three times as strong as cast iron. With reasonable care they will last a lifetime

Features—One man operation. Light weight. Wide opening jaws. Provision on ends for flanges. Bending edge for forming as small as ⅛ in. reverse bends.

Variety of Work—Adapted for a large variety of work, such as cornice, gutter, square and octagon pipe, skylights, flashing, ridge roll, roofing, ventilating, furnace, auto radiator, fender and body, tanks, corrugated drain boards, etc.

Capacities—Capacity rated is for mild steel and for bending a flange 1 in. or wider on sheets of full capacity. Narrow flanges less than 1 in. cannot be bent on full length sheets of rated capacity.

No. 3 Length, 8 ft. 1 in. Capacity, 16 gauge. Weight, 1500 lbs. . . . . Each, $410.00

No. 4—Length, 8 ft. 1 in. Capacity, 18 gauge. Weight, 1000 lbs. . . . . Each, 265.00

These sizes carried in stock. Prices quoted and literature furnished on sizes from 3 ft. to 12 ft upon request.

COMBINATION BRAKE AND FOLDER

P. S. & W.

Capacity, 16 Gauge Iron

Furnished with seven Formers for making circular and semi-circular bends in cornice work, etc.; viz., 3, 2½, 2, 1⅝, 1½, 1¼ and 1 in. When machine is used for 16 gauge iron two men can operate the machine with greater ease.

The machine is made of iron with steel bending blades, and allows for easy and accurate formation of wide angles or narrow locks within the rated capacity with no danger of springing. The cross head is brought down and the work securely clamped through eccentrics actuated by hand levers from either end of machine. This arrangement is a one-man feature, making the changing of position for clamping the work unnecessary. Adjustments are provided for in the eccentric connection allowing for a maximum pressure to bear on the work while in the process of forming, preventing the work slipping from a true line. This adjustment is secured through loosening top nut "A" and tightening lower nut "B" for heavy stock and the reverse when lighter materials are used. The bending plate is adjustable, a suitable wrench being provided for loosening the hexagon nuts, when this plate may be raised or lowered for forming a closed lock or an open lock for receiving wire as large as ⅜ in. in diameter. Adjustable stop gauge "C" is provided for the forming of angles.

No. 93 Length, 42 in.; clamping jaws open 1¾ in.; will form open or closed locks ⅛ to 1¾ in.; will form open or closed locks ⅛ to 1⅝ in. on 16 ga., ⅛ to ⅜ in. on 18 ga.; ⅛ in on 20 ga., 1/8 in. on 22 ga.; ⅛ in. on 24 ga. Weight, 950 lbs . . . . . Each, $450.00

FOLDING MACHINES

STOW'S PATENT ADJUSTABLE BAR

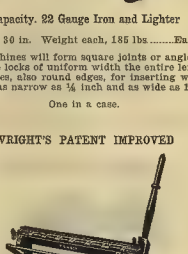
Capacity. 22 Gauge Iron and Lighter

No. 63—Width 30 in. Weight each, 185 lbs. . . . . Each, $132 00

These machines will form square joints or angles and turn narrow or wide locks of uniform width the entire length. Will turn sharp edges, also round edges, for inserting wire. Locks can be formed as narrow as ⅛ inch and as wide as 1 inch.

One in a case.

WRIGHT'S PATENT IMPROVED



Capacity, 22 Gauge Iron and Lighter

No. 1—Width, 30¼ in. Weight each, 85 lbs. . . . . Each, $46.00
Will turn locks ¼ and ⅜ in.

NOTE No. 1 is not fitted with Round Steel Rod Attachment and is furnished less the Steel Strips, this number being adjustable for turning only two sizes of locks as recommended without the use of Steel Strips.

One in a case.

Capacity, 22 Gauge Iron and Lighter

No. 10A—31 inches long. Will form locks ⅛ to ½ inches. Weight, 85 lbs. . . . . Each, $52.00

Fitted with machined steel bending blades and gauges. The gauge is adjustable and moves upon a line parallel with the edge of the Folding Blade.

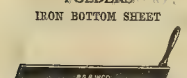
One in a case.

SEATTLE HARDWARE COMPANY

TINNERS' TOOLS

FOLDERS

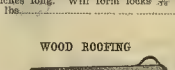
IRON BOTTOM SHEET



Capacity, 22 Gauge Iron and Lighter

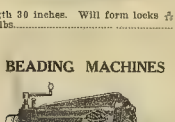
No. 23—30 inches long. Will form locks $\frac{1}{4}$ to $\frac{3}{8}$ inches. Weight, 105 lbs. ..... Each, $48.00

WOOD ROOFING



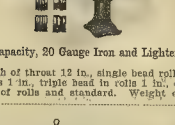
No. 123—Length 30 inches. Will form locks $\frac{1}{4}$ to $\frac{3}{8}$ inches. Weight, 17 lbs. ..... Each, $15.00

BEADING MACHINES



Capacity, 20 Gauge Iron and Lighter

No. 617—Depth of throat 12 in., single bead rolls $\frac{3}{8}$ in., Ogee bead in rolls 1 in., triple bead in rolls 1 in., complete with three pairs of rolls and standard. Weight each, 140 lbs. Each $125 00



Capacity, 26 Gauge Iron and Lighter

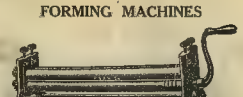
No. 620—Depth of throat to frame 6¼ in., depth of throat to gauge 5¼ in., dia. of rolls 1$\frac{13}{16}$ in., width of rolls 1$\frac{7}{16}$ in., distance between shaft 1$\frac{7}{8}$ in. Weight each 50 lbs. Each $76.00

Above furnished with four pairs Rolls, one each Ogee $\frac{5}{8}$ in., Triple $\frac{5}{8}$ in., Triple Coffee Pot ½ in., and Single $\frac{1}{4}$ in. Improved Standard No. 975 is furnished.

No. 621—Depth of throat to frame 4¾ in., depth of throat to gauge 4 in., dia. of rolls 1¾ in., width of rolls 1 in., distance between shaft centers 1$\frac{7}{16}$ in Weight each 40 lbs. Each $64.00

Above furnished with five pairs Rolls, one pair each, Ogee $\frac{1}{2}$ in , Triple Coffee Pot $\frac{3}{8}$ in., Double $\frac{1}{4}$ in., Astragal $\frac{1}{4}$ in., and Single $\frac{1}{16}$ in. Improved Standard No. 975 is furnished.

FORMING MACHINES



Stow's Patent Stovepipe Former

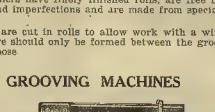
No. 373—Machine Cut Steel Compensating Gears, 31 in. Rolls, 2 in. diameter. Weight, 140 lbs. ..... Each, $77.00

No. 382—Machine Cut Steel Compensating Gears and Quick Acting Levers, 30-in. Rolls, 2 in. diameter. Weight, 165 lbs. ..... Each $90.00

The formers have finely finished rolls, are free from indentations and imperfections and are made from special rolled hard steel.

Grooves are cut in rolls to allow work with a wire to be formed. Wire should only be formed between the grooves cut for that purpose

GROOVING MACHINES

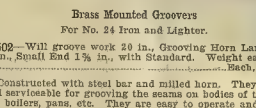


Brass Mounted Groovers

For No. 24 Iron and Lighter.

No. 502—Will groove work 20 in., Grooving Horn Large End 3 in., Small End 1$\frac{7}{8}$ in., with Standard. Weight each, 102 lbs. ..... Each, $66.00

Constructed with steel bar and milled horn. They will be found serviceable for grooving the seams on bodies of tin cans, pails, boilers, pans, etc. They are easy to operate and simple in construction. Three grooving rolls, one each $\frac{1}{8}$, $\frac{3}{16}$ and $\frac{1}{4}$ in., are furnished.

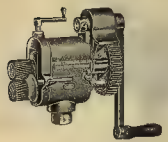


No. 518 Improved Automatic Rapid Groover, with flattening attachment. Will groove work 30 in.; 2 in. smallest pipe that can be grooved. Weight each, 200 lbs. ..... Each, $126 00

Six grooving rolls are furnished on each with $\frac{1}{8}$, $\frac{3}{16}$ and $\frac{1}{4}$ in. grooves, two with $\frac{5}{16}$ in. and one flattening roll.

TINNERS' TOOLS

CORNICE MAKERS' CRIMPER



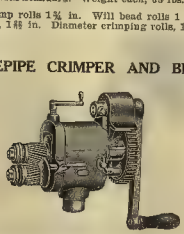
The rolls on this machine are attached to arbor in a manner that leaves the ends or faces of the rolls flush for crimping close up to a bend or angle. This machine has straight crimping rolls, adjustable for two speeds, geared for heavy work and may be run direct drive on light work.

Capacity, 20 Gauge Iron and Lighter

No. 592—Cornice Maker's Crimper. Width crimp rolls, 1¾ in. Complete with Standard. Weight each, 63 lbs....Each, $62.00

Will crimp rolls 1¾ in. Will bead rolls 1 in. Diameter beading rolls, 1⅛ in. Diameter crimping rolls, 1⅛ in.

STOVEPIPE CRIMPER AND BEADER



Capacity, 20 Gauge Iron and Lighter

No. 585—Complete with Standard. Wt., 66 lbs.....Each, $59.00

These machines are designed to facilitate the making and putting together of sheet metal pipe of different diameters. They crimp and contract the edges of stove and conductor-pipes so that the lengths are put together easily.

Will crimp rolls 1⅝ in. Will bead rolls 1 in. Diameter beading rolls, 1⅛ in. Diameter crimping rolls, 1⅛ in. Size of bead ogee, $\frac{1}{4}$ in.

STOVEPIPE CUTTER AND CRIMPER

KOHLER

No. 100—Will cut and crimp any size pipe, without waste, in one operation. Length, 27 in. Height, 15½ in. Carbon tool steel cutters. Crimping rolls made of steel. 12 in. scale cast on machine. Weight, 46 lbs.....Each, $44.00

CRIMPING AND BEADING MACHINES

Capacity, 24 Gauge Iron and Lighter

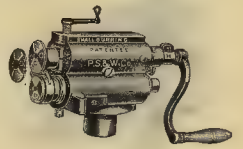
Actual tests have demonstrated that for crimping or beading Stove Pipe, Elbows, Furnace Pipe, etc., this type of machine is vastly superior to any other built for the purpose. The construction throughout is exceedingly strong and rigid, and permits of easy and rapid adjustment.

The depression of rolls is accomplished by a foot treadle. The contact of the upper Beading Roll is adjusted by a lever, and this lever also gives an independent adjustment for raising upper Beading Roll, taking same out of contact with lower roll, in case crimping only is desired. The adjustment of this lever is effected by means of an eccentric device, and is handy and practically instantaneous in its action. The application of this feature greatly increases the simplicity of this machine, as the operation of crimping alone can be performed without substituting blank collars for beading rolls. The crank is adjustable to suit light or heavy work.

No. 602—Wt. 38 lbs.. Each, $44.00

BURRING MACHINES

STOW'S ENCASED



With Small, Extra Upper Face

Capacity, 24 Gauge Iron and Lighter

No. 579—Diameter of Rolls 1½ inches. Widest flange or burr that can be turned, $\frac{1}{16}$ inch. With Standard.. Weight each, 21 lbs.....Each, $47 00

With Large, Extra Upper Face

Capacity, 24 Gauge Iron and Lighter

No. 580—Diameter of Rolls, 2½ inches. Widest flange or burr that can be turned, ¾ inch. With Standard. Weight each, 23 lbs.....Each, $45.00

Burring Machine or Jenny used for creasing, edging rims of covers for pails, boilers, etc., and for preparing circular edges of bottoms and bodies of vessels for double-seaming

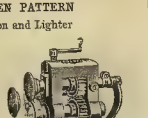
SEATTLE HARDWARE COMPANY

TINNERS' TOOLS

BURRING MACHINE

COLUMBIAN OR OPEN PATTERN

Capacity, 22 Gauge Iron and Lighter



No. 576—For Burring or Flanging Bottom on Bodies of Vessels, etc. Dia. of rolls 1½ in., widest flange or burr that can be turned ⅞ in. Complete with Standard. Weight 21 lbs.....Each, $79.00

No. 577 Dia. of Rolls 2⅛ in., widest flange or burr that can be turned ¼ in. Complete with Standard. Weight 25 lbs.....Each, $46.00

One in a wooden box.

SETTING-DOWN MACHINES

The inclined position of both upper and lower faces allows work to be held up or down and seams to be started inward while setting down, thereby facilitating the operation of double seaming.

These machines are used to close down the edges formed by a burring machine.

Capacity, 24 Gauge Iron and Lighter

No. 561—With inclined face. For seams up to ⅜ inch. Weight 50 lbs each.....Each, $56 00

WIRING MACHINES

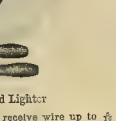
STOW'S ENCASED PATTERN

Capacity, 24 Gauge Iron and Lighter

No. 526—Diameter of Rolls 3 in. Will receive wire up to ⅝ in. diameter. With Standard. Weight, 26 lbs.....Each, $52.00

COLUMBIAN OR OPEN PATTERN

Wiring machines follow the turning machines. They are intended for rolling sheet metal tightly around wire after its seat has been prepared by the turning machine. Cylindrical or straight work can be wired with these machines



Capacity, 24 Gauge Iron and Lighter

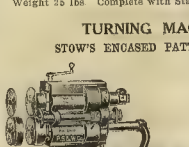
No. 525—Diameter of Rolls, 3 in. Will receive wire up to ⅝ in. diameter. With Standard. Weight, 31 lbs.....Each, $48.00

ELBOW EDGING MACHINES

No. 551—Columbian Pattern Diameter of rolls, 2¼ inches. Weight 35 lbs Complete with Standard .....Each, $47.00

TURNING MACHINES

STOW'S ENCASED PATTERN—SMALL



Thick Edge or Turning Machines are intended for turning or curving the tops of vessels to receive wire. The wire is first formed into shape of vessel and then inserted in groove made by the turning machine The wiring machine finishes the operation, closing metal completely around wire, adding finish and durability to the vessel

Capacity, 24 Gauge Iron and Lighter

No. 545—Diameter of Rolls, 2¾ in. Smallest diameter of wire that can be used, ⅛ in. Largest, ½ in. With Standard. Weight each, 23 lbs. .....Each, $50.00

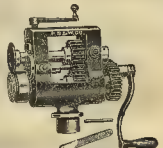
STOW'S ENCASED PATTERN—LARGE

Capacity, 24 Gauge Iron and Lighter

No. 546—Diameter of Rolls, 3 in. Smallest diameter of wire that can be used, ⅛ in. Largest, ⅝ in. With Standard. Weight each, 28 lbs. .....Each, $56 00

COLUMBIAN PATTERN—SMALL

Nos. 541-542



No. 547

Capacity, 22 Gauge Iron and Lighter

No. 541—Small Columbian Pattern. Diameter of rolls, 2 ⅞ inch. Smallest diameter of wire that can be used, ⅛ inch. Largest diameter of wire that can be used, ½ inch. Weight 25 lbs. Complete with Standard.....Each, $47.00

COLUMBIAN PATTERN—LARGE

Capacity, 22 Gauge Iron and Lighter

No. 542—Diameter of Rolls, 3 in. Smallest diameter of wire that can be used, ⅛ in. Largest, ⅝ in. With Standard. Weight each, 31 lbs. .....Each, $36.00

Capacity, 18 Gauge Iron and Lighter

No. 547—Diameter of rolls, 3¼ inch. Smallest diameter wire, ⅛ inch. Largest diameter wire, ⅝ inch. With Standard. Weight, 115 lbs.....Each, 125 00

HOLDALL REVOLVING MACHINE STANDARD

Features—

No. 1—A place for everything and everything in its place. How many times have you delayed that rush job owing to misplacing a roll you could not find when you needed the most or how much valuable time have you consumed in locating a face wrench at each time it was necessary to change a roll?

No. 2 A Revolving Turret holding four machines. Four operations can be completed without changing positions

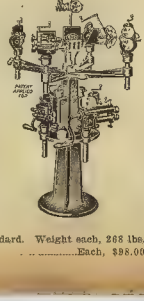
No. 3—Hand Lever for holding Revolving Turret in a fixed stationary position.

No. 4 — Adjustable Machine Holders that raise, lower and swivel for suiting operating convenience of machines for the short and tall operator as well as the work in process

No. 5 Lower Stationary Turret for holding four additional machines arranged for quickly interchanging with any machine set in upper Revolving Turret. This Lower Turret also provides for a handy shelf, holding oil can, tools, etc., which are used in connection with equipment mounted.

No. 6—Two additional reserve Machine Posts out of the way, supported on brackets to hold any large bench machine that will not fit in Holders provided for the smaller machines. Ten Posts in all go with each Standard.

No. 7—A handy Rack for holding Pexto Catalogue—a book that every worker in tin and sheet metal should have near him for quick reference.



No. 988—Revolving Machine Standard. Weight each, 268 lbs. ..... Each, $88.00

SQUARING SHEARS

For 18 Gauge Iron and Lighter

No. 132-BNT—Without Side Table ..... Each, $225.00
No. 132-B—With Side Table 232.00
No. 137-A—Without Side Table, with Hold-Down Attachment ..... Each, 320.00

Specifications

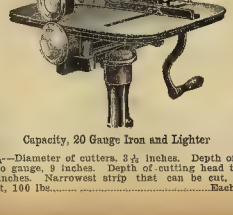
SLITTING SHEARS

Combined Bench and Slitting Shears

Capacity, 18 Gauge Iron and Lighter

No. 248—Length of cutting blades 8½ inches. Depth of cutting head to gauge, 3⅛ inches. Depth of cutting head to frame, 10 inches. Size of table 12x15½ inches. Weight 165 lbs. ..... Each, $126.00

A splendid, practical Shear for general use in car shops, automobile shops and other shops where a variety of straight and irregular cutting is done



Capacity, 20 Gauge Iron and Lighter

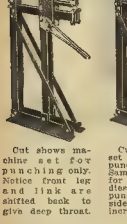
No. 250A—Diameter of cutters, 3½ inches. Depth of cutting head to gauge, 9 inches. Depth of cutting head to frame, 10⅛ inches. Narrowest strip that can be cut, ¼ inch. Weight, 100 lbs. ..... Each, $75.00

SEATTLE HARDWARE COMPANY

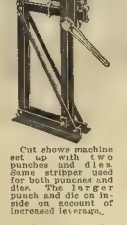
TINNERS' TOOLS

PUNCH, SHEAR AND BENDER

MARVEL

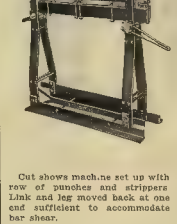


Cut shows machine set for punching only. Notice front leg and link are shifted back to give deep throat.



Cut shows machine set up with two punches and dies. Same stripper used for both punches and dies. The larger punch and die on inside on account of increased leverage.

This cut shows machine set with bender on outside and angle iron notcher on inside



Cut shows mach.ne set up with row of punches and strippers Link and leg moved back at one end sufficient to accommodate bar shear.

Machine shown here with shear in center set cross-wise for splitting sheets, etc. Both links and legs moved sufficient to accommodate angle iron notcher at one end, bender at other end.

This machine is built almost entirely of bar steel and practically unbreakable. The horizontal or tool holding bars are heat treated and space ¾ in. apart to form bolt slot for clamping various tools. Pressure or leverage is applied to these members by an upper and lower eccentric connected by two links and hand levers. The lower parallel bars remain stationary at all times, the upper bars only being movable vertically. The eccentric and link arrangement are also slidably mounted on parallel bars, which make it possible and easy to change throat of machine. If machine is to be used as a punch, slip punch and die holder with bolt in slot, insert stripper and tighten, and you have a punch machine with punch visible from all sides. More than one punch and die may be clamped in position at one time if desired. All other tools such as shear, notcher for angle iron, and bender are inserted and bolted in like manner. The front leg or clamp is also slidably mounted on both the parallel bars or tool carriers and also on the angle iron base, and may be shifted entirely to rear or against rear leg of machine. Eccentrics are squared on both ends. This allows hand levers to be operated from either side or from front or rear of machine Eccentrics are made of special alloy steel, hardened and drawn, which makes the strongest steel known for this purpose. Special tools to suit various requirements may be designed and used in place of those mentioned. The parallel bars or tool carriers are 22 in long.

No. 22 —Net weight, 260 lbs. Weight crated for shipment, 310 lbs. ..... Each, $175.00

Capacity

Will punch ⅜-in. hole in ⅜-in. stock 2-in. throat.
Will punch ¼-in. hole in ¼-in. stock—6-in. throat.
Will shear ⅝x2-in flat bars.
Will notch 1¼x1¼x⅜-in. angle iron.
Will bend 1½x1½x⅜-in. angle iron 90 degrees
Will bend 1½x1¼-in. flat bars.
And their equivalents in other sizes.
Vertical travel of bars, one lever, ⅞ in.
Vertical travel of bars, two levers, ⅝ in.
Space between upper and lower bars, 3¼ in

Dimensions

Height of machine, 48 in. Length, 24 in. Width, 10 in.

Unless otherwise ordered, Marvel All-Steel Punch, Shear and Bender No. 22 is regularly furnished with one punch and die holder and ¼ in., ⅜ in. and ⅝-in. punches and dies; one V block bender 2 in. long; one shear holder with shear blades 3 in long; one 90-degree notching punch and die, with necessary bolts and washers.

This machine is much the same as No. 22, except having an eccentric and link arrangement at both ends. It is also larger and heavier. Bars or tool carriers of this machine are 4 ft. long. It will be seen from cut that the machine has an almost unlimited range of usefulness. Several punches and dies may be placed between the links spaced at distance required and a row of holes punched simultaneously. A punch and die, V block bender, a shear, a notcher, etc, may all be set in the machine at the same time ready for use. The shear as shown may be placed in the center and sheet iron may be split. It will take 40 inches between links. Legs are sidably mounted on angle iron base and may be shifted to give deep throat on one or both ends of machine. Levers may be worked from one or both ends at same time. Angle iron may be notched and bent square with tools all set in machine at same time. Various other combinations of tools may be arranged to suit requirements. Parallel bars and links and levers are heat treated. Levers are of truss variety, and instead of socket generally used, are clamped to square ends of eccentrics.

No. 23—Net weight, 475 lbs. Shipping weight, 550 lbs. ..... Each, $250.00

Capacity

Will punch ⅜-in. hole in ⅜-in. stock—2-in. throat.
Will punch ¼-in. through ¼-in. stock—9-in. throat
Will shear 1½x2-in.' bars.
Will notch 1½x1½x½-in. angle iron.
Will bend 1½x1½x¼-in. angle iron 90 degrees.
Will bend ⅝x1½-in. flat bars.
Will split ¼-in. sheets lengthwise
And their equivalents in other sizes.
Vertical travel of bars, one lever, ⅞ in.
Vertical travel of bars, two levers, ⅝ in.
Space between upper and lower bars, 3¼ in.

Dimensions

Height of machine, 50 in. Length, 48 in.' Width, 17 in

Unless otherwise ordered, Marvel All-Steel Punch, Shear and Bender No. 23 is regularly furnished with one punch and die holder and ¼ in., ⅜ in. and ⅝-in. punches and dies; one V block bender 2 in. long; one shear holder with shear blades 3 in. long; one 90-degree notching punch and die, with necessary bolts and washers.

TINNERS' TOOLS

RAPID SLITTING SHEARS

For General Slitting.

Capacity, 16 Gauge Iron and Lighter

No. 255—Depth of throat, 18 in. Size of table, 20x8 in. Shipping weight, 325 lbs. ..... Each, $170.00

NOTE—The cutters on these shears have two cutting edges making them reversible and the crank is adjustable to different leverages. Where floor space is limited these Shears will prove a good substitute for long-length Squaring Shears.

SCROLL SHEARS

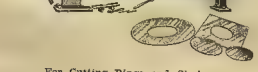
Capacity, 20 Gauge Iron and Lighter

No. 269—Length of cutting blades, 4¼ inches. Depth of cutting head to gauge, 17 inches. Depth of cutting head to frame, 13¾ inches. Weight, 165 lbs. ..... Each, $80.00

These Shears will cut circles, ovals, ogees and all irregular shapes with the greatest ease. Well adapted for cutting from the center of a sheet. Mounted in a standard which screws to the bench and is adjustable to any angle required.

The length of cut is regulated by means of a set screw in frame back of lower blade. Upper blade can be adjusted for wear by means of the two rear adjustable screws.

RING AND CIRCULAR SHEARS



For Cutting Rings and Circles.

Capacity, 20 Gauge Iron and Lighter

No. 298—Will circle from square blanks, 3½ to 22 in. Will cut rings small as (inside diameter), 3½ in. Will cut rings large as (outside diameter), 22 in. Shipping weight, 195 lbs. ..... Each, $100.00

LEVER SHEARS

Capacity, 10 Gauge Iron and Lighter

Will Cut Iron Bars ☆ In. Square and ¼x½ In.

No. 296—Length of cutting blades, 8 inches. Length of gauge rod, 22 inches. Weight, 130 lbs. ..... Each, $100.00

Highly recommended for slitting sheet iron in any length or width. Patterned to allow sheets to pass freely. The lower blade is fastened to a plate that is adjustable to take up wear. The upper blade is fastened to a plate that is reinforced by the frame of the machine, overcoming any spring in cutting.

ECCENTRIC

Nos. 253 and 252

Capacity, Iron and Steel, ¼ Inch and Lighter

No. 253—Length of blades, 3½ in. Length of bed, 10½ in. Height of bed, 6½ in. Length over all, including lever, 18 in. Weight each, 17 lbs. ..... Each, $25.00

The Eccentric cutting device requires very little effort to cut sheet metal up to the full rated capacity.

AUTO BRAKE BAND LINING CUTTER

No. 252—Same description as No. 253. Weight each, 17 lbs. ..... Each, $25.00

Will cut Brake Band Lining up to ⅝ x 3 inches with one stroke of lever. It will prove a very desirable machine on the counters of auto supply houses, hardware stores selling automobile accessories and on the bench in the garage shop.

COMBINATION SHEAR AND PUNCH

STOW'S

For Cutting ⅛-Inch Iron and Punching ☆-Inch Iron

No. 678—5½ in. Cut, with Five Punches, 1/8, 1/4, 1/2, 3/4 and 3/4 in. Weight each net, 120 lbs. ..... Each, $75.00

One in a case

Extra Punches (⅛, ¼, ½, ¾ and ⅝ in.). ..... Each, 1.70
Extra Die Plate (includes all sizes) ..... " 3.20

SEATTLE HARDWARE COMPANY

TINNERS' TOOLS

COMBINATION SHEAR AND PUNCH

LITTLE GIANT

Built in Three Sizes—Simple, Strong, Durable, Cheap

Four thousand in use today in blacksmiths, wagonmakers, carriage makers, machine shops, implement manufacturers and all metal workers.

One hundred pounds on lever gives 25,000 pounds pressure on punch.

Capacities	1	2	3

SHEARS OR SNIPS

J. WISS & SONS CO.

Wiss Tinner Snips may be tested to cut 20# wire nails without marring the edges, and then cut clean the lightest of tissue paper. This test shows the fine adjustment of the Wiss Snip, its strength and toughness and its marvelous keen edge.

Wiss Snips are superior in quality and construction, in shape, in cutting edge, in strength, in tests and in finish. They work easier, give more work and better work.

A piece of Tool Steel is Chrome Boron Steel welded to the inside of the Blades of the toughest of Steel Forgings gives the Wiss Snip its perfect, lasting cutting edge—an edge that will not break or chew the work but which is always sharp. The blades are perfectly shaped, with points made strong and the handles formed so that they will not tire the hand even after continuous use. The most severe factory tests to which we subject our snips enables us to unrestrictedly guarantee every pair to do their work satisfactorily.

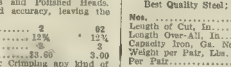
TINNERS' RULES



A Steel Rule that will prove invaluable for laying out work in general. The upper line is the ordinary Rule graduated by eighths of an inch. The lower line shows at a glance the exact circumference of any cylinder by simply ascertaining the diameter, i. e., a vessel 5 in. in diameter the Rule indicates to be 15¾ in. in circumference. The reverse side contains much useful information in large plain figures regarding the sizes of sixty different articles, such as cans, measures, pails, etc., with straight or flaring sides, flat or pitched top. Liquid and dry measure in quarts, gallons and bushels. First is given the dimensions for vessels holding 1 to 5 gallons liquid measure, second, one-quarter to 2 bushels dry measure, third, pans with pitched tops 1 to 10 gallons, fourth, cans with flat top 1 to 200 gallons; fifth, vessel holding 1 to 8 quarts and ½ bushel to 2 bushels dry measure. Each

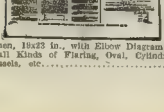
No. 107—36 in., Nickel Plated Steel, Width 1¼ in., ⅛ in. Thick; Weight Each About 1½ Lbs. $4.50

TINNERS' RULE AND CHART

Each

Magic Rule and Chart, Complete in Hinged Wooden Case.... $7.00

The Magic Pattern Rule consists of a Nickel Plated Steel Bar 4 ft. Long, ⅞ in. Square, marked in Circumference inches on the Front and in inches and eighths on the Back, and Two Slides with Set Screws, into which Trammed Points are Fastened. For laying out Elbow Patterns, the Left Hand Slide is Fastened to the End of the Bar by the Set Screw, and the Right Hand Slide is Set the Diameter of Elbow Wanted. A Flexible Steel Ribbon on the Top of Bar is then raised to the required height, according to angle of Elbow Wanted: One Glance at the Chart, giving the height necessary for the Elbow required.



Each

Chart Only, Linen, 10x23 in., with Elbow Diagram and Rules for Cutting all Kinds of Flaring, Oval, Cylindrical, Cone Shaped Vessels, etc. $1.00

WIRE GAUGES

ROUND, English Standard

Used for Marking or Punching Tin, Sheet Steel, etc.

Per Dozen

No. 01—3¼ in. Solid Cast Steel, Twisted Shank $1.25

Weight per Dozen 1¾ Lbs.

PLUMBERS' SCRAPERS

Extra Quality Forged Steel Blade; Wood Handle

Per Dozen

No. 11—Length 5 in.; Weight Each About 2 Lbs. $2.25

Kelley-How-Thomson Co. of Duluth

BLOW TORCHES

Burns Gasoline. For Use of Electricians, Gas Fitters, Dentists, Painters, Plumbers, Mechanics and Linemen

No. 315

No. 215

Seamless Brass Tank, with Concave Bottom, and Filler Plug. Automatic Spring Valve Pump in Handle. The Burner is an Improved Closed Generator Type Designed for Either Outdoor or Inside Use. Detachable Soldering Iron Holder.

	Each
No. 315—Capacity **1 Pint**; Net Weight 2 Lbs.	$12 00
No. 215—Capacity **1 Quart**; Net Weight 3¼ Lbs.	13.60

No. 224

No. 224

Heavy Seamless Brass Tank, with Heavy Corrugated Brass Concave Bottom. Filler Plug in Bottom. Automatic Spring Valve Pump in Handle. Burner is an Improved Closed Generator Type and throws out a very hot flame.

	Each
No. 224—Capacity **1 Pint**; Net Weight 2¼ Lbs.	$13 60
No. 224—Capacity **1 Quart**; Net Weight 3 Lbs.	15 20

No. 302

No. 202

Heavy Seamless Brass Tank with Heavy Concave Bottom; Filler Plug in Bottom; Automatic Brass Pump in Tank; Soldering Iron Attachment.

	Each
No. 302—Capacity **1 Pint**; Net Weight 2½ Lbs.	$14 40
No 202—Capacity **1 Quart**; Net Weight 4 Lbs.	16 00

No. 304

No. 204

Heavy Seamless Brass Tank, Reinforced with Concave Bottom and Handsomely Finished, Automatic Spring Valve Pump in Handle; Burner of Heavy Bronze and Generates a Clear, Blue Flame. Soldering Iron Attachment.

	Each
No. 304—Capacity **1 Pint**; Net Weight 2½ Lbs.	$13.60
No. 204—Capacity **1 Quart**; Net Weight 3 Lbs.	15.20

AUTO TORCH

Heavy Seamless Brass Tank, with Automatic Spring Valve Pump in Handle. Improved Burner.

This Torch gives a Very Hot, Blue Flame and is so constructed as to lay flat in a tool box. The attachment to prevent tipping over has the approval of all users and mechanics. It consists of a powerful metal spring attached to the bottom with no projecting side lugs and so formed that when sprung into use it is safe against accidental closing or being broken off. Suitable for outside or inside use.

	Each
No. 418—Capacity **1 Pint**..... Net Weight 2¾ Lbs.	$15 40

Heavy Seamless Brass Tank, with Funnel-Shaped Bottom or filling; Fitted with Non-Leak Filler Plug. Made with Patent Coil, closing under generator and Back Flow Burner making it the Hottest Torch made. Recommended for Electricians, Telephone and Telegraph Repairmen, Street Railroad, Trolley Line Work, etc.

	Each
No. 29—Capacity **1 Quart**..... Net Weight 4 Lbs.	$18.80

Heavy Seamless Brass Tank; Funnel-Shaped Bottom with Turner Non-Leaking Filler Plug; Pump Located in Handle with Air Valve at bottom of barrel. Round type of burner producing a very hot flame; Hook and support for holding soldering iron.

	Each
No. 21—Capacity **1 Quart**..... Net Weight 3¼ Lbs.	$18.00

BLOW TORCH BURNERS

BURNS KEROSENE
One Filling Will Burn Two Hours Steady

BURNS KEROSENE
One Filling Will Burn Two Hours Steady

ALCADE KEROSENE
(Burner Only, Without Tank)

Interchangeable with the Burner on Any Gasoline Blow Torch

To convert a Gasoline Torch into a Kerosene Torch, takes but a few minutes time, all that is necessary is to unscrew the gasoline burner from its tank and replace with an "Alcade." Produces a Hotter Flame. Reduces the Cost of Operation, and there is less liability of explosion.

The "Alcade" Burner generates an intense heat from kerosene, much hotter than can be generated from gasoline. Will not corrode or tarnish, and the Torch for Brazing, also for the use of Painters for Removing Paint, Varnish, etc. Wind has no effect upon the flame.

	Each
No. 1—Made of Brass; Length of Generator 5 in., Diameter 1⅞ in.	$5.00
No. 2—Made of Brass; Length of Generator 5½ in., Diameter 1¾ in.; For Heavier Work than the No. 1. Weight Each 2¼ Lbs.	6.00

BLOW TORCH

DOUBLE JET
For Gasoline

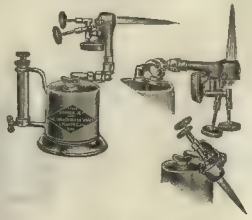
The Double Jet Burners are very simple and easily regulated. They consume every particle of gasoline owing to their perfect combustion, and produces a much higher degree of heat than other hydro carbon burners.

Heavy Gauge Seamless Brass Tank, with Funnel Bottom and Non-leak filler plug; Bronze Metal Burner; Pump is in Handle with Air Valve located at base. Recommended for Light Brazing, Annealing Light Materials, Brazing on Rubber Tires and Paint Burning.

Each

No. 92 Capacity 1 Quart; Net Weight 3 Lbs. $17 10

BLOW PIPE



DOUBLE JET
For Alcohol

Heavy Seamless Brass Tank, with Filler Plug at top of tank. Automatic Spring Valve Pump in Handle, with Shut-off Valve at base.

Designed for Burning Wood Alcohol. The construction of burner mixes the fuel with air in correct proportions and perfect combination is secured. The air pressure in the reservoir produced by the pump gives a constant clean blast flame sufficient to melt 25% platinum solder and suitable for fine soldering, espoually where intense heat is required, also for Tempering and Drawing Temper in fine Tools, Annealing and all similar work. For Electricians, Jewelers and Dentists. Adopted for Lead Burning on Storage Batteries.

Each

No. 8—Capacity **1 Pint;** Net Weight 2 Lbs.... .....$23 35

FIRE POTS

FOR KEROSENE

Produces more heat, with less fuel, at a lower price, than is possible with any Furnace burning gasoline.

The Tank is made of Heavy Seamless Drawn Steel with a steel band autogenously welded around the bottom. Equipped with Extra Heavy Upright Rods and the Filler Inlet is large and convenient. Hood is made of Drawn Steel and is practically indestructible. The Burner is constructed to burn kerosene or gasoline and can be used equally as well when exposed to a draught or out of doors in windy weather. The feed valve is placed in a convenient position so as to control the fuel supply and adjust the flame.

Each

No. 83—Capacity **7 Pints;** Weight 17½ Lbs.. . . . . $33.60

Net Weight 16½ Lbs.

GASOLINE

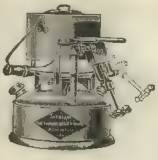
Tank is made of Heavy Seamless Drawn Steel, with Extra Heavy Bottom, Funnel-Shaped Filler Opening with Improved Filler Plug. The connections are reinforced, it has heavy uprights. All fittings are autogenously welded. Produces steady flame in wind and coldest weather.

Capacity **7 Pints;** Height 16½ in.

Each

No. 56—With **Rubber Bulb and Hose** $19.60
No. 66—With **Automatic Pump**.....21.20

Weight 7½ Lbs.



GASOLINE

Tank of Heavy Steel, reinforced and Autogenously welded at every joint. The Burner is made of Bronze Burner Metal, attached to swivel joint and gives a flat flame of intense heat, with positively the minimum consumption of gasoline.

The Top Sections is large enough to heat a pair of 8 Lb. Soldering Coppers and melt a Five-inch Pot of Metal at the same time. This section can be removed and tank and burner used as a torch.

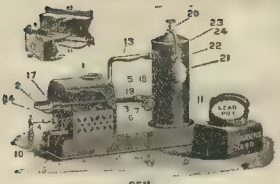
Can be used in the wind or in the coldest weather.

Each

No. 36 —Capcity **5 Pints;** Weight 9 Lbs.$24.80
No. 34—Capacity **7 Pints;** Weight 10 Lbs..... 27.20

SOLDERING FURNACES

For Roofers', Tinners' Plumbers' and Electricians' Use



GEM

Especially recommended for Roofers' and Tinners' Use; the Burner emits a 4 inch Flame for Each Soldering Copper; For Bench Use or Outside Work it is unsurpassed; Distributes Flame full length of Coppers; Patent Drip Cup Generates Gas without smoke, odor or noise; Has Improved Slotted Cast Iron Burner, cannot clog with Solder, takes all sizes of Coppers, furnishing a Powerful Flame, and will last for years.

Each

No 3—**Tank Capacity 3 Quarts**, Height 16 in.; Heavy Sheet Steel Base, Size 21x7 in.; Fire Proof Copper Reservoir, Has Regulating Valve; Black Rubber Bulb and Stem, Adjustable Handle, Covered with Enameled Wood.....$12.00

One in a Crate; Weight 22 Lbs. Each

EXTRA PARTS FOR GEM FURNACES

Rubber Bulb and Stem	$0 60
Generator Valve	1.00
Metal Pots, for Plumbers' Use	1 25
Hoods, for Plumbers' Use	1.10

Loose

TINNERS' STOVES

Burns Charcoal

The Fire Pot is Constructed so that the Ashes Fall into a Pan Beneath the Coal, Keeping the Fire Clear and the Draft Good; Light and Easy to Carry

Each

No. 782—Sheet Iron Body, Japanned; Cast Iron Base, Top, Legs and Door; Heavy Wrought Iron Bail. Height 15½ in.; Diameter 8 in.....$4.25

Weight Each About 15 Lbs.

LUNDY DOUBLE BLAST

Will Heat Soldering Iron twice as fast and with one-half as much Gasoline as Common Furnace and will always have a Hot Iron Ready for the Tinner, thus saving much time. The Flames are forced from the outside to the center so that when One Iron is in use, the other receives both hot blasts directly on it. Independent Generating Valve allows adding of more Gasoline to Drip Cup, if Operator does not get enough to Generate the first time, without waiting for Generator to Cool Off. The Generator is made of Brass and will not Rust, has a ⅜ in. opening which cannot become clogged but will always burn a Blue Flame. Large Powerful Brass Pump, size 1x10 in., is attached rigidly and cannot get out of order.

Each

No. 25—Tank Capacity 1 Gallon; Galvanized Steel Tank, Aluminum Painted, Size 5x12 in.; Strong Base with Heavy Wire in Bottom; Height 15½ in., Size of Base, 7⅜x19 in.....$17.00

One in a Crate; Weight 29 Lbs. Each

TINNERS' GAS SOLDERING FURNACES

Two Burner

These Furnaces will burn Natural or Artificial Gas and will prove serviceable for general use in heating soldering coppers. Consumes About 8 feet of Gas per Hour; Cast Iron Base and Burners; Polished Steel Top; Brick Lined. Burners are Drilled, and are Operated with Stop Cock and Adjustable Air Mixer; Very Economical.

Each

No. 794—Length 11 in.; Width 6½ in.; Height 7 in.....$4.00

Weight Each About 12 Lbs.

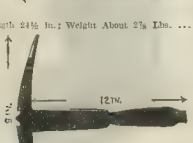
SLATERS TOOLS

These Tools used Extensively in the Laying and Repairing of Slate and Other Kinds of Roofing are Drop Forged from the Highest Grade Materials. The Blade of the Ripper is Drawn Down Very Thin from Tool Steel lasting a Forged Handle. Hammers are made of Solid Forgings from Crucible Cast Steel with Properly Tempered Head, Point and Cutting Edges. A Leather Handle that will not Break or Wear Out Easily, Smoothly Finished to fit the hand snugly is used on our Slater's Hammer. Stakes and Punches are Forged from Cast Steel.

SLATERS' RIPPERS

Each

No. 905—Length 24½ in.; Weight About 2⅞ Lbs. $2.00



SLATERS' HAMMERS

Each

No. 987—Weight 1¾ Lbs. $4.50

GUTTER TONGS

Per Pair

No. 277 Size Blade 1⅝x1½ in., Depth of Jaws, 14 in., Length of Handle 14 in..... $6.00

Weight per Pair 10 Lbs.

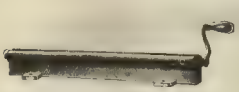
ROOFING FOLDERS

Made of Well Seasoned Wood with Blades Fitted of a High Grade, Special Steel, Accurately Machined and Finely Finished

Each

No. 123—Length 20 in.; Will form ⅞ and ¾ in. Locks.....$6.50

Weight Each About 17 Lbs.



IRON BOTTOM GUTTER BEADERS

Solid Cast Steel, Japanned, with Ground Edges, Securely Bolted; Polished Steel Rod; Malleable Iron Crank with Wood Handle. Can be used on Any Material up to 24 Gauge.

Each

No. 709—30 in. Long; Diameter of Rod ⅛ in.; Length Over-All 31 in.; Weight 17 Lbs.....$8.00

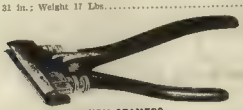
ADJUSTABLE GUTTER BEADERS

This Machine is so constructed that it can be easily adjusted to be used with Rods from ⅜ to ⅞ inch in Diameter. The Thickness of the Metal is Determined by the Size of the Rod. Thickness of the Metal is Determined by the Size of the Rod It has a Gauge or Stop on the Left-Hand End, so that after Adjusting the Jaws and Setting the Gauge for the Size of the Rod to be used the Jaws can be easily opened to remove the work and Rod, and then closed to exactly the same position as when the Bead was formed so that the operator can form any number of Beads of exactly the same size. The Jaws are Adjusted by a Hand Wheel with Rack and Pinion which Adjusts both Ends of the Movable Jaw

Each

No. 700—30 in. Long; Diameter of Rod ⅛ in.....$14.00

Weight Each About 75 Lbs.



HANDY SEAMERS

Very useful where a Larger Seamer would not be practical. It is Adjustable for Seams of Different Widths. A Handy Tool for Outside Work.

Each

No. 791—Size of Blade 3⅛x⅞ in., Adjustable for ⅛ to ⅜ in. Seam; Length Over-All 7¾ in..... $1.00

Weight Each About 1 Lb.

SQUARE PIPE CRIMPERS

For Making the Assembling of Square Pipe Joints a Quick and Easy Operation, producing Tight Fitting Joints and Improving the Quality and Appearance of the Work.

Each

No. 787—Length 11 in.....$1.25

Weight Each About 2 Lbs.

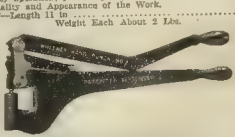
HAND PUNCHES

Furnished with Three Sets of Dies and Punches; viz., ⅛, ⅞ and ¼ inch. The Toggle Movement on this Practical and Handy Tool Works Easily and Rapidly. It may be carried in the Pocket and will Prove a Very Useful Tool for Outside Work

Each

No. 790—Size 4x7½ in.; Depth of Throat 1 in.....$5.00

Weight Each About 2½ Lbs.



PORTABLE LEVER PUNCHES

Manufactured expressly to meet the requirements of all Steel and Sheet Metal Work; will Punch Clean Cut Holes, without burrs, from ⅛ to ⅞ in. by ⅛ in. The Die is divided, can be easily and instantly changed, or adjusted, and is Self-centering.

Each

No. 2—Capacity, ⅞ in. Hole Through ⅛ in. Iron; or its equivalent; Drop Forged Parts; Length Over-All 23 in...$20.00

Weight Each About 18 Lbs.

POCKET KNIVES

AMERICAN CUTLERY is now recognized as the finest product in the World and it is with much pride that we announce our connection with the Napanoch Knife Company of Napanoch, N Y., who are considered the most reliable manufacturers in America and whose product is recognized without equal in this country. "GOODS OF QUALITY" is continually their motto, and it is with this in mind that our Pocket Knives are manufactured, according to our own specifications, as it is our aim to furnish under the Hickory and Napanoch Brands, the HIGHEST QUALITY of Pocket Cutlery that can be produced.

Our Pocket Cutlery has gained a wide reputation for itself and the confidence of many buyers has been won through the merits of these goods, which will build up a profitable business and establish the most satisfactory trade. We have prepared several detailed paragraphs calling special attention to individual points that we claim exclusively for our goods, and we are confident that after careful inspection, you will agree that our line is without an equal in every possible detail.

QUALITY.

This is the most important feature of any high grade article and in this a dealer places great confidence. We claim our Knives are full value for the reason they are not skimped in any way, and will stand the test of the most exacting buyers. The Blades are made from the Highest Grade of English Crucible Steel, and are forged by hand from the Bar. The guage is extra heavy and as noticeable, the blades are full size and not drawn out like most imported Knives. Every detail is followed out closely in the Coverings, Linings, Bolsters, Rivets, Shields, and Back Springs, and only the finest products are used that are adapted to its individual purpose.

FINISH.

The workmanship in our factory is one of the most noticeable features upon examining our Line. This is inspected by experts, who examine carefully each pattern to see that it is perfect. The Knives are trimmed neatly and have no rough edges or imperfect handles to mar their beauty. The finish of the blades has the most perfect and uniform crocus, that can be appreciated only by seeing the goods themselves.

GUARANTEE.

It is unconditional, and we absolutely guarantee every Pocket Knife against all defects of temper or flaws. It is universal among dealers in the Northwest, that a Pocket Knife with our brand is backed by a positive guarantee, and with such a confidence that a Montana dealer will accept willingly goods sold by a Michigan firm, if they proved defective. Let it be understood we hereby authorize any dealer to replace defective goods bearing our brand.

NUMBERING SYSTEM.

It is arranged for the convenience of those coming in contact with our Pocket Knives, so the patterns can be recognized at a glance by the numbers which specify the covering and the number of blades by the first, and second figures respectively. The first figure represents the covering as indicated from the following table.

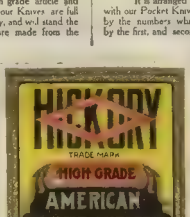
No. 1	signifies	Ebony Handle
No. 2	"	Rosewood Handle.
No. 3	"	Cocobolo Handle.
No. 4	"	Stag Handle.
No. 5	"	Bone Handle.
No. 6	"	Horn Handle.
No. 7	"	Pearl Handle.
No. 8	"	Composition Handle.
No. 9	"	Iron Handle.

The second figure signifies the number of blades as shown in the following:

Example—No. 1248—This pattern has an Ebony handle and two blades.

Example—No. 43178—This pattern has a Stag handle with three blades.

The figures following the first two digits are stock numbers.



The above reproduction shows the label used on the Hickory Brand of Pocket Knives.

STAMPING

This has been added mostly for the convenience of the dealer who has a positive check on all patterns received. The number of each Knife is stamped on the tang or heel of the large blade and the many advantages of this arrangement can only be appreciated by those coming in daily contact with Pocket Knives. When making up a mail order and you desire a few more patterns that is low in your stock, simply open the large blade and get the correct number.

SPECIAL FEATURES.

Examine carefully one of our large Jack Knives, and note the reversed large blade, is placed on the inside so it can be opened easily and quickly. Where it is practical in the large patterns, the inside lining has been partially cut out. This prevents the lodging of dirt which dulls the blade, and with this feature the knife can easily be kept clean, thus insuring a perfect edge at all times.

PATTERNS OF BLADES.

The line, as shown in the following illustrations, contain the most practical shapes adapted to all purposes of pocket knife use.

CARE OF A KNIFE.

Many Knives prove unsatisfactory from the lack of proper care and attention. A Knife should be cleaned and oiled well at the joints, and taken care of the same as any delicate mechanism. Do not use it for a screw driver chisel or nail puller as our guarantee does not cover such abuse. We are confident that every Pocket Knife with our Brand will give perfect satisfaction, with the proper care and usage.

POCKET KNIVES

AMERICAN CUTLERY is now recognized as the finest product in the World and it is with much pride that we announce our connection with the Napanoch Knife Company of Napanoch, N Y., who are considered the most reliable manufacturers in America and whose product is recognized without equal in this country. "GOODS OF QUALITY" is continually their motto, and it is with this in mind that our Pocket Knives are manufactured, according to our own specifications, as it is our aim to furnish under the Hickory and Napanoch Brands, the HIGHEST QUALITY of Pocket Cutlery that can be produced.

Our Pocket Cutlery has gained a wide reputation for itself and the confidence of many buyers has been won through the merits of these goods, which will build up a profitable business and establish the most satisfactory trade. We have prepared several detailed paragraphs calling special attention to individual points that we claim exclusively for our goods, and we are confident that after careful inspection, you will agree that our line is without an equal in every possible detail.

QUALITY.

This is the most important feature of any high grade article and in this a dealer places great confidence. We claim our Knives are full value for the reason they are not skimped in any way, and will stand the test of the most exacting buyers. The Blades are made from the Highest Grade of English Crucible Steel, and are forged by hand from the Bar. The guage is extra heavy and as noticeable, the blades are full size and not drawn out like most imported Knives. Every detail is followed out closely in the Coverings, Linings, Bolsters, Rivets, Shields, and Back Springs, and only the finest products are used that are adapted to its individual purpose.

FINISH.

The workmanship in our factory is one of the most noticeable features upon examining our Line. This is inspected by experts, who examine carefully each pattern to see that it is perfect. The Knives are trimmed neatly and have no rough edges or imperfect handles to mar their beauty. The finish of the blades has the most perfect and uniform crocus, that can be appreciated only by seeing the goods themselves.

GUARANTEE.

It is unconditional, and we absolutely guarantee every Pocket Knife against all defects of temper or flaws. It is universal among dealers in the Northwest, that a Pocket Knife with our brand is backed by a positive guarantee, and with such a confidence that a Montana dealer will accept willingly goods sold by a Michigan firm, if they proved defective. Let it be understood we hereby authorize any dealer to replace defective goods bearing our brand.

NUMBERING SYSTEM.

It is arranged for the convenience of those coming in contact with our Pocket Knives, so the patterns can be recognized at a glance by the numbers which specify the covering and the number of blades by the first, and second figures respectively. The first figure represents the covering as indicated from the following table.

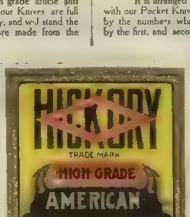
No. 1	signifies	Ebony Handle
No. 2	"	Rosewood Handle.
No. 3	"	Cocobolo Handle.
No. 4	"	Stag Handle.
No. 5	"	Bone Handle.
No. 6	"	Horn Handle.
No. 7	"	Pearl Handle.
No. 8	"	Composition Handle.
No. 9	"	Iron Handle.

The second figure signifies the number of blades as shown in the following:

Example—No. 1248—This pattern has an Ebony handle and two blades.

Example—No. 43178—This pattern has a Stag handle with three blades.

The figures following the first two digits are stock numbers.



The above reproduction shows the label used on the Hickory Brand of Pocket Knives.

STAMPING

This has been added mostly for the convenience of the dealer who has a positive check on all patterns received. The number of each Knife is stamped on the tang or heel of the large blade and the many advantages of this arrangement can only be appreciated by those coming in daily contact with Pocket Knives. When making up a mail order and you desire a few more patterns that is low in your stock, simply open the large blade and get the correct number.

SPECIAL FEATURES.

Examine carefully one of our large Jack Knives, and note the reversed large blade, is placed on the inside so it can be opened easily and quickly. Where it is practical in the large patterns, the inside lining has been partially cut out. This prevents the lodging of dirt which dulls the blade, and with this feature the knife can easily be kept clean, thus insuring a perfect edge at all times.

PATTERNS OF BLADES.

The line, as shown in the following illustrations, contain the most practical shapes adapted to all purposes of pocket knife use.

CARE OF A KNIFE.

Many Knives prove unsatisfactory from the lack of proper care and attention. A Knife should be cleaned and oiled well at the joints, and taken care of the same as any delicate mechanism. Do not use it for a screw driver chisel or nail puller as our guarantee does not cover such abuse. We are confident that every Pocket Knife with our Brand will give perfect satisfaction, with the proper care and usage.

Kelley-How-Thomson Co. of Duluth
ACCESSORIES FOR FORD AUTOMOBILES

STEWART SPEEDOMETER AND INSTRUMENT BOARD

Takes Vibration out of Steering Wheel, Improves Appearance. No Bolts, No Screws, No Brackets. Instantaneous Installation. Can be Installed in One Minute.

Every Ford owner wants one of these handsome, new Instrument Boards on his car. This has proven one of the fastest selling accessories on the market.

Anyone can install it in a minute's time. Merely exert a downward pull on the steering column, slip the board into place, and it is there to stay. The lower edge rests tight against the steering column—eliminates every bit of vibration from the steering wheel. Makes driving a pleasure—no more tired arms, no matter how long you drive.

You can install on the Stewart Instrument Board a clock, headlight control, priming lever, starting control, and any other accessories you desire.

The Stewart Instrument Board is made of wood, with black satin, egg-shell finish. It is an exclusive Stewart feature, and the many patented features can't be imitated.

Each

No. 160B—Stewart Instrument Board, furnished Complete with Speedometer and Driving Equipment ready to install.....$15 25

STEWART SPEEDOMETER AND INSTRUMENT BOARD

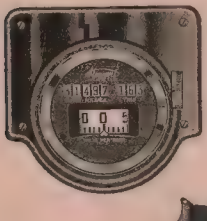
For Ford Sedan and Coupelet Models

A Handsome Instrument which will appeal to every owner of a Ford Sedan and Coupelet Car.

Instrument can be easily installed without altering the car in any manner. Simply fasten the plate to the dash by means of the four wood screws furnished. No cutting is necessary.

Each

No. 160C—60 mile capacity rotating speed size; Stewart Odometer, consisting of 100,000-mile Season Register and 100-mile Trip Register. The trip register can be easily reset to any mile or tenth of a mile without disturbing the season register. Speedometer has Black Dial Face and Black Enamel Bezel Ring. Complete with Instrument Board and Driving Equipment.....$16.25



STEWART SPEEDOMETERS

Magnetic Type. Special for 1919-20 Ford Cars.

This Model is Especially Designed for use on the Instrument Board provided in the Newer Ford Cars.

It is Built on the Magnetic Principle. None but a Stewart can be so constructed. It is the same type of instrument accepted by automotive engineers as the most accurate and trustworthy. Installation is remarkably easy. No round hole necessary. Simply cut out section of board.

Each

No. 160A—3-in. Dial Face, 60-mile capacity Rotating Speed Dial, 100,000-mile Season Odometer and 100-mile Trip Register, which resets to any tenth of a mile. Has a Tungsten Steel Magnet. Jewelled pivots. Flange matches starter switch plate. Furnished in Black Enamel. Complete with all Fittings and Driving Equipment for Ford Cars with built-in instrument board

$15 00

J. M. SPEEDOMETER AND INSTRUMENT BOARD

One in a Box; Weight, 15½ Lbs. Each

ACCESSORIES FOR FORD AUTOMOBILES

RAYFIELD CARBURETORS
Ford Special

The Rayfield Carburetor for Ford Cars is a Complete Outfit as shown in the illustration, consisting of a Special Rayfield Carburetor adapted to the Ford Motor, a Special Hot Air Attachment and Dash Adjustment.

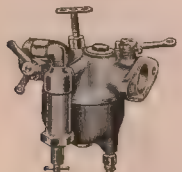
The Carburetor is packed complete in a box, ready for installation, which can be done quickly by any ordinary mechanic as the Carburetor is interchangeable with that which comes standard with every Ford.

All Rayfield Carburetors are guaranteed against ordinary defects, such as poor workmanship or faulty material, for a period of one year from date of purchase. All Carburetors found defective will be repaired and refinished free of charge on receipt prepaid at Factory.

Regardless of the type of Carburetor now in use, the Rayfield on a Ford will give the following results: Easier Starting, Quicker Pick-up, More Speed; A Lower Throttled Motor, Greater Power on the Hills, a Smoother, More Flexible Motor; and at the same time 20 per cent to 50 per cent more miles per gallon. Each

No. FS—Complete with all Fittings.....$21 00

Weight Each about 20 Lbs.



KINGSTON CARBURETORS

This is a New Carburetor (Model L2S), specially designed by Kingston for Ford users. It carries many exceptional features, including a Gasoline Strainer, and Integral Part of the Device. In these days of constantly lowering fuel values the need of strainers is apparent, and the addition will be appreciated by all Ford users. Like all of the Kingston line, this is a guaranteed product.

Each

Model L2S—Kingston Carburetors $7 50

STROMBERG CARBURETORS
Ford Special

This is the best of all instruments ever produced for the Ford car. It is sent to you just as is shown in the picture—complete—ready for installation. One screw puts on the hot-air housing, no change is necessary in the gasoline and the carburetor itself goes right on to the old manifold.

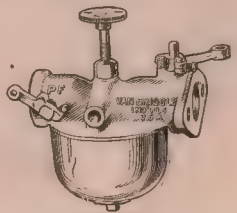
The adjustments are extremely simple and anyone can make them—high speed and idling. The carburetor is of the plain tube type and is equipped with what is known as an economizer. It controls the needle valve which regulates the gasoline flow so that at all times the mixture is cut down to minimum.

In bringing out this carburetor, one of the primary requirements was that it be made to start easier than any other one on the market. In order to obtain easy starting, it is necessary to be able to shut off all air inlets to the carburetor. By doing so the high vacuum which is in the manifold is transferred to the carburetor and this vacuum draws the gasoline off of the nozzle holes, breaking it up in a very fine spray and carrying it direct to the cylinders. Without this high vacuum in the carburetor, the gasoline enters the manifold in heavy drops but can not reach the cylinders. This is what causes a flooded carburetor and makes starting practically impossible.

In order to further facilitate starting when the weather is extremely cold, this Stromberg Carburetor is equipped with a priming plunger, operated by a wire running to the front of the radiator.

Each

Stromberg Ford Carburetor. $21.50

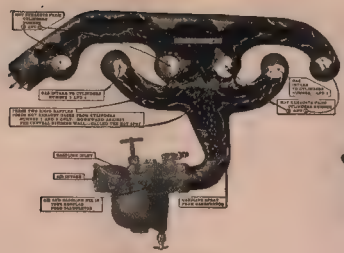


VAN BRIGGLE

As the Velocity of air through the Carburetor increases it Automatically decreases the consumption of Gasoline; This new principle of Carburetion used only in the Van Briggle Carburetors has been tested and approved by one of the Government's best Technical Engineers.

Each

No. P. F.—Van Briggle Carburetor $10.00



"THE PRINCIPLE IS RIGHT"

ANCO ON FORD ENGINE

ANCO "EVENHEAT" MANIFOLDS

The Anco "Evenheat" Manifold is a finely finished combined intake and exhaust manifold cast in one rigid piece and put on easily, with a wrench only, in twenty minutes, in the exact place of the regular Ford manifolds now on your engine. No other part of your car is changed in any way. No holes to drill. No cutting and fitting. Nothing to adjust. Nothing to wear out. The ANCO is trouble proof and is guaranteed to outlast your car.

THE PRINCIPLE IS RIGHT

The Illustration—in which the front of the ANCO is broken away to show the inner construction — tells its own simple story. The hot dividing wall, or "hot spot," which completely separates the exhaust and intake channels, is located centrally directly above the vertical section of the intake. Gasoline spray from the carburetor strikes this "hot spot" squarely and is transformed instantly into a fog of perfect gas—swept uniformly into all the cylinders along the easy bends of the ANCO.

The cooling effect of the intake air and vapor, always in direct proportion to the heat of the exhaust, keeps this "hot spot" constantly at the right temperature.

Note carefully how each half of the "hot spot" and therefore each division of the intake—right and left—gets exactly the same amount of heat.

This vital "evenheat" feature of the ANCO—not licensed nor found in any other manifold for Fords—loads each cylinder uniformly for every shot with a quick-firing, clean-burning, full-powered gas. The ANCO transforms every particle of fuel into a perfect "high-tension" explosive. Power flows smoothly and gasoline gives up its last inch of mileage.

NO ADJUSTMENTS

Gas savers requiring adjustment by the driver while operating the car may be sold safely perhaps to a few expert Ford mechanics but even they soon tire of watching the adjustment on such devices and discard them—as you have seen. The average Ford driver, who as you know will not attempt even the simple adjustment of his carburetor, and who is unable to notice anything less than a very pronounced irregularity in engine performance, certainly cannot be expected to keep out of trouble with gas savers requiring adjustment.

The Anco Evenheat Manifold, like the even heat "Hot Spot," manifolds on the Liberty Motor, the new war truck motors and on the engines of Studebaker, Chalmers, Hupmobile, Cole and other good cars, has no moving parts—nothing to adjust—nothing to watch—nothing to cause confusion or disappointment to any Ford driver. The ANCO makes no demands on the time or attention of the user and therefore does not tire him and annoy him to the point of discarding it. **The ANCO stays sold.**

	Each
Anco "Evenheat" Manifold—Shipping Weight 13 Lbs.	$9 75

One in a Paper Carton with Full Instructions, and Seven Copper Gaskets, One Dozen in a Case

Note.—If there ever occurs a case when the ANCO upon such a test (See guarantee enclosed in each Carton) may appear not to meet this guarantee, the car disorder reason ble will be found for you and at once corrected, or the Anderson Company, South Bend, Indiana, manufacturers, will refund promptly and without question the full purchase price in cash on return of the manifold, charges collect, at any time within Thirty days from date of purchase.

Kelley-How-Thomson Co. of Duluth
ACCESSORIES FOR FORD AUTOMOBILES.

RADIATORS
For 1909 to 1916 Fords
(Equipped with Peerless Core)

Radiator Shell or Casing Finished with Two Heavy Coats of Black Japan; Honeycomb Brass Core in Gray. Heavy Tinned Malleable Iron Water Connection; All Parts coming into contact with water are of Brass; Heavy Wrought Steel Side Brackets.

	Each
No. 10—Peerless Radiator.	$24 00

Weight Boxed, 40 Lbs.

RADIATORS
For 1917-1918 Ford Cars
(Equipped with Peerless Core)

Radiator Shell or Casing Finished with Two Heavy Coats of Black Japan; Honeycomb Brass Core in Gray. Heavy Tinned Malleable Iron Water Connector; All Parts coming into contact with water are of Brass; Heavy Wrought Steel Side Brackets.
Filler Neck 2 in. Diameter.

	Each
No. 11—Peerless Radiator.	$24.00

Weight Boxed, 50 Lbs.

COMBINATION RADIATOR HOOD AND DUST SHIELD
To Convert 1915 and 1916 Ford Cars Into Latest Model
(Equipped with Peerless Core)

It Gives the Car a Streamline effect, which is so much desired on automobiles. To obtain this appearance the hood is tapered so as to insure the proper fit.

Finished with Two Heavy Coats of Black Enamel; Honeycomb Brass Core in Gray; Heavy Tinned Malleable Iron Water Connector. All Parts coming into contact with water are of Brass.

	Each
No. 12—Comb, Radiator, Hood and Shield	$35 00

Shipping Weight about 75 Lbs.

PERFEX RADIATORS

Leak Proof—Patented, locked, banded connections of Core, a sealing that is uniform and far superior to the old usual single or lapped soldered joints, resulting in PERFEX cores having the unique feature of JOINTS CONSTITUTING THE STRONGEST PART OF THE RADIATOR instead of the weakest as in other types. Will actually stand freezing without injury.

Channel Plates—Metal of special alloy, the highest grade material obtainable for its purpose.

Efficiency—100%, as every cubic inch in positive water and air circulation, with no dead water pockets and no FINS.

Cooling—25% to 50% greater than other types of cellular or tubular radiators.

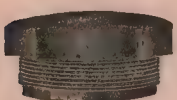
Water—20% to 50% greater than other radiators.

Water Channels—Two to three times larger than in other cellular radiators and volume of water correspondingly greater. Free and positive circulation in each channel, thus clogging is reduced to a minimum.

Perfex—Is a real Honeycomb, Direct Cellular cooling radiator.

Perfex Radiators—Are subjected to a final test of 20 lbs. of steam pressure, whereas the usual test for other types is not to exceed 8 lbs. of air pressure.

	Each
No. 20—Perfex Radiator for 1909 to 1916 Fords; Weight about 46 Lbs.... ..	$30 00
No. 22—Perfex Radiator for 1917, 1920 Fords; Weight about 50 Lbs.....	40 00

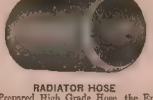


RADIATOR CAPS

Cast of Heavy Brass, Covered with Black Hard Rubber, will not Heat as does Regular Cap and is Much Easier to Remove.

	Each
No. 143B—Black Hard Rubber Finish.....	$0.36

Weight Each, about ¼ Lb.



RADIATOR HOSE

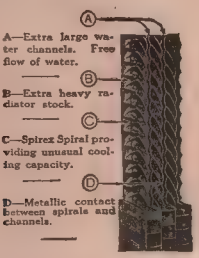
A Specially Prepared High Grade Hose, the Ends of which are Specially Finished. No Fabric Showing; Nothing to Unravel or Deteriorate.

	Per Dozen
No. 1—1 in. to 1¼ in. in Diameter, 2¾ in. Long; for Lower Connection; Weight about 3 Oz. ..	$1 80
No. 2—2 in. in Diameter; 3¼ in. Long; for Upper Connection; Weight about 4 Oz...	2 00

ACCESSORIES FOR FORD AUTOMOBILES

PEERLESS

For Late Models



SPIREX RADIATORS

A Radiator with 42 per cent greater Cooling Capacity than the regular equipment and easily 25 per cent more Capacity than any other Radiator designed for use on Ford cars. The additional cooling capacity is due to the peculiar construction of the Spirex Core. This is an exclusive patented Spirex feature. Because of the spiral construction of the air cells, producing greater cooling efficiency, Spirex cores need not be as thick and as heavy as other Radiators. The Spirex Core is 1¼ in. Thick, it has a frontal area of 300 square inches as compared with 270 square inches found in most other Radiators for Fords. The filler cup is nickel plated brass, not steel; the stay rod fastening is a casting with twelve threads; The water channels and tanks are made of brass; Spirex Radiators are not damaged by freezing. Every Radiator is guaranteed; Packed in individual boxes; Weight, 1916 type, 36 Lbs., 1917 type, 40 Lbs.

	Each
No. 1—Spirex Special Radiator, 1909-1916 Cars	$30 00
No. 2—Spirex Special Radiator, 1917-1920 Cars	30 00

TWO BLADED FAN

The Juelson Two-Bladed Fan opens up a vast field for new uses: This Fan is so constructed that the air currents are directed and driven over all of the surfaces of all the cylinders; A shaft of swiftly moving cool air just wide enough to bathe completely the engine, keeping the motor and water cool under all climate conditions; The Juelson Fan is well built, and will last indefinitely without repair or adjustment of any kind, a cone shaped hub protects the bushings against dirt, the blades and bushings are instantly detachable; It is so well balanced that very little power is required to turn the fan; Vibration and fan noises are entirely eliminated; Has 50 per cent more cooling efficiency as proven by repeated tests in nationally known laboratories.

	Each
Juelson Fan—For Ford Cars	$1.20

TEST PLUGS

These Test Plugs may also be purchased separately, as follows:

	Each
R-1—Radiator Cap Test Plug	$30 0
R-2—Inlet Test Plug	2 00
R-3—Outlet Test Plug	2 00
Set of 3 Rubbers for R-2 and R-3	50

ACCESSORIES FOR FORD AUTOMOBILES

FAN BELTS

Endless; Oak Tanned Leather

Oak Tanned Leather; Securely Cemented, Waterproofed Lap; Two Rows of Stitching Across Lap.

Width, 1¼ in.; Treated by a Special Process making it Water, Steam and Oil Proof.

	Each
No. 16—For Car up to 1916	$0.50
No. 17—For 1917 to 1920 Cars	.50

FAN BELTS

Detachable; Oak Tanned Leather

Oak Tanned Leather; Width, 1¼ in.; Will Not Shrink nor Stretch and is impervious to both water and oil.

Equipped with a Special Fastener which means that it can be put on or taken off the car in an instant so that replacements can be made without soiling the hands.

	Each
No. 16D—For Cars up to 1916	$0 75
No. 17D—For 1917 to 1920 Cars	75

VULCO-CORD FAN BELTS

Every Vulco-Cord Belt is oil-proof, heat-proof, non-stretch and built by a patented process to conform to the pulleys, so that there is equal tension on each of the ten plies.

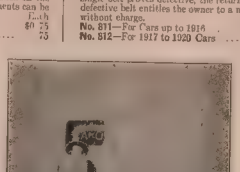
Each belt is positively guaranteed to outwear any other leather, webbing or fabric belt on the market, and under this guarantee if a single belt proves defective, the return of the defective belt entitles the owner to a new one without charge.

	Each
No. 811—For Cars up to 1916	$0 45
No. 812—For 1917 to 1920 Cars	50

FAN BELT RETAINERS

On some Ford cars the fan is out of alignment enough so that the Belt is off most of the time. This Retainer will Prevent this and the installation is only a question of a few minutes with a wrench.

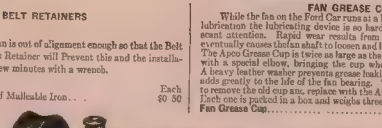
	Each
Fan Belt Retainers—Made of Malleable Iron	$0 50



FAN GREASE CUP

While the fan on the Ford Car runs at a high speed and needs frequent lubrication the lubricating device is so hard to get at that it really gets scant attention. Rapid wear results from lack of lubrication and this eventually causes the fan shaft to loosen and lets the fan strike the radiator. The Apco Grease Cup is twice as large as the one on the car and it is fitted with a special elbow, bringing the cup where it can be reached easily. A heavy leather washer prevents grease leaking and a turn every few days adds greatly to the life of the fan bearing. To apply it is only necessary to remove the old cup and replace with the Apco, a matter of five minutes. Each one is packed in a box and weighs three ounces.

	Each
Fan Grease Cup	$0.35



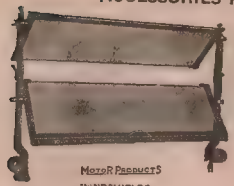
WATER CIRCULATING PUMPS

Make Powerful Fords

The one piece body casting insures perfect alignment of both bearings for all time. Its bearings are ample to take the wear of continuous running. Made to run with and last with motor; Centrifugal in principle, the only principle for continuous service. We guarantee to accomplish it. Machine made carefully put up throughout. Not merely an agitator but a high grade force pump. Permanent in every way. No set collars to loosen up. Nothing to get out of order, out of place, out of gear or out of line. Anybody who runs a Ford car or truck can install this pump with the aid of a small wrench, cut, substitute new belt supplied with each pump, fill oil cup with hard oil; Belt used is standard. Valve Cord No. 835, same as used on Buick and Dodge cars, readily renewable.

	Each
Perfection—Water Circulating Pumps	$10 00

Pumps packed in Individual Cardboard Cartons, each Complete with Belt and Cap Screws to Attach.



MOTOR PRODUCTS

WINDSHIELDS
Adjustable Type

For 1915, 1916, 1917, 1918 and 1919 Ford Cars

Adapted to all the Latest Models of Ford Cars that have Cowl Bodies and Straight, Non-Ventilating Shields as Regular Equipment.

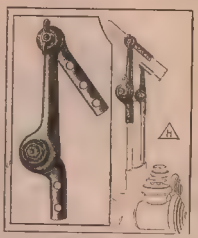
Furnished Complete with Brackets and Cross Bar assembled, this arrangement is an improvement and superior to others as the Cross Bar is fitted with a Rubber Filler Strip which comes in contact with the lower frame and makes the Shield Absolutely Weatherproof when closed. Another advantage is that the holes in the Brackets are Oblong, so that the Shield is Adjusted without the necessity of the Body, Radiator or Otherwise marring and short cuts and bad Jogs for Top Straps in Top position are provided. The Stanchions or Side Members of these Models are Extra Heavy Steel, which prevents breaking where inserted in the Brackets.

Each

No. Z17 Plate Glass, 30¾ in. Wide, 24 in. High $19.00

Shipping Weight about 50 Lbs.

Note: Can be furnished with Studs and Top Fasteners for One Man Top at an extra charge of $2.00.



VENTILATING WINDSHIELD ATTACHMENT

Designed to replace the Hinges Originally Supplied on Ford Windshield, converting it into a Rain Vision and Ventilating Shield, providing safety and comfort in all kinds of weather. Easily and quickly applied by the use of a screw driver only. No holes to be bored or other changes necessary

Per Set

No. 1500—Ebony Enamel Finish $2.50

One Complete Set in a Carton, Weight 5 Lbs.

FORD FRONT TOP STRAPS

Web, Single Strap with Spud and Footman Loop; Adjustable Hook Buckle

Per Dozen Pairs

No. 117—Length 15 in.; Width ⅞ in. $4.32

TOP PROP NUTS

Per Dozen

No. 296—Prop Nuts $0.50

RUBBER MATS

High Grade Rubber, ¼ in. Thick, Exact Fit, Lays Evenly on Floor and has Openings Suitable for Models 1915, 1916, 1917 and 1918 Fords

Each

No. 53—Size 28x29½ in. $2.00

Weight Each about 2¾ Lbs.

HOOD FASTENERS

A neat and positive fastener; can be applied to any car. More convenient and satisfactory than a screw fastener

Each

No. A—Made of Steel; Black Finish; Weight each about 6 Oz. $0.60

FORD BUMPERS

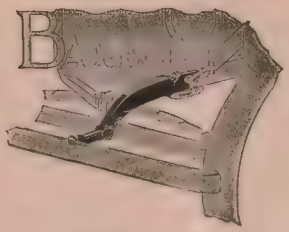
With Clamp-On Fittings Special for the Ford Car

Made of the Highest Quality Alloy Steel carefully Oil Tempered, the Springs overlap in the front and are held together with two retainers which permit ready adjustment for different width of Frame: 54 to 60 in. adjustment.

Can be attached, without drilling or altering the car in any way. The Brackets are extra long and are attached under the car out of sight, they insure the Bumper an Eelim inate vibration.

Each

No. 8 Front; Nickel Bar, Black Clips $12 00
No. 58—Rear; Nickel Bar, Black Clips 14 00

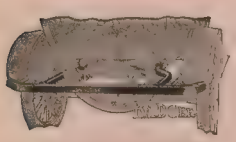


BADGER FORD FRONT BUMPER

This Bumper attaches very rigidly to the front of the Ford car, and owing to its frameike design gives the car a somewhat massive appearance. The radiator of the car may be seen without lifting the Bumper. Ample room for cranking is allowed. Brackets are attached by means of a hook bolt over the under bracket, and an eyebolt over the castellated nut on the underside of the car frame.

Each

No. 628N—1¾ in. Channel; Nickel Plated $9 00

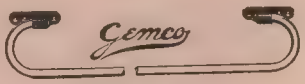


BADGER NEW FORD REAR BUMPER

This Bumper was designed especially for the new Ford cars which are being equipped with a rear tire carrier as standard equipment, but will also fit on all other models of the Ford. The brackets are very easily bolted over the rear cross channel frame member of the Ford. An offset in the brackets allows plenty of clearance for the rear tire carrier.

Each

No. 500N—1¾ in. Channel; Nickel Plated $10 00



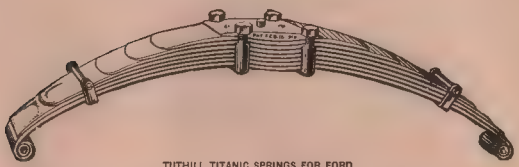
ROBE RAILS

Swinging Pattern for Ford Cars

1¼ in. Seamless Tube, 20 in. to 4 ft., can be swung out from body 4 in.

Each

No. 1190—All Black, Hard Rubber Finish..... $0 90



TUTHILL TITANIC SPRINGS FOR FORD

Guaranteed Forever Against Center Breakage

There is an insistent demand for high quality front springs for Ford Cars to replace the many thousands which break annually. The No. 102 Spring illustrated above is the famous Tuthill Titanic patented boltless spring which is guaranteed forever against center breakage. The price is low enough to be competitive with the old-fashioned center bolt spring and the motorist is glad to pay for the extra protection. Titanics mean more pep and goodwill to the dealer.

	Each
No. 102—Titanic Standard Equipment, 7 plates	$6 00
No. 111—Titanic Heavy Duty, 9 plates	7 50

FRONT SPRINGS FOR FORD

No. 100

Made of an excellent quality of High Carbon Steel and representing the very best possible value of any unwarranteed front spring for Ford Car

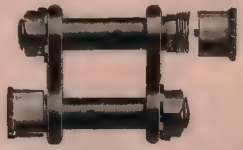
	Each
No. 100—Standard, 7 plates	$4.00

REAR SPRINGS FOR FORD

No. 105

No rear spring made for Ford Cars can give better service than th quality product made by Tuthill Spring Company, America's most successful spring builders.

	Each
No. 105—Standard Equipment, 8 plates	$12 00
No. 112—Heavy Duty, 10 plates	18 00

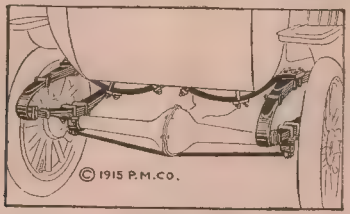


SPRING SHACKLE AND GREASE CUP INTEGRAL

Steel Material Finish, Brass Caps; Will Thoroughly Lubricate Spring Eye Bushings, Preventing Wear and Eliminating Squeaking

	Each
No. 144F—For Front Spring; Size 3¼x2¼ 5/16 in.; Weight ¾ Lb.	$1 6
No. 144R—For Rear Spring; Size 4¾x2⅝ 5/8 in.; Weight 1 Lb.	1 6

Kelley-How-Thomson Co. of Duluth
ACCESSORIES FOR FORD AUTOMOBILES



BETTER-FORD SPRINGS

Will eliminate jars and jolts, giving the car a smooth, easy motion when traveling over rough roads. Indu gres ar rad lity, increasing the power of control and preventing many accidents common to light cars. Lengthen the life of the car by overcoming destructive vibration which racks the engine, transmission, and other vital parts.

The Steel Truss Rods serve to materially strengthen the rear axle and add another big car feature without extra expense.

No Special Tools Necessary

Remove Old Springs. Place Axle Bearings Over Joint on End of Axle. Line up with Front Axle and Tighten securely. When in proper position, axle bearings should strike line about ¾ inch above front axle.

Place Cross Bar in position under body. Fasten with the two old clips and the two additional furnished with spring. Tighten Bolt Springs in position on bearings, making sure that they set parallel.

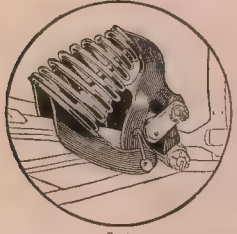
Lower body until ends of cross bar rest in place on top of springs. Fasten with clip.

Note: No shackles or bolts are furnished with springs. Use the old ones.

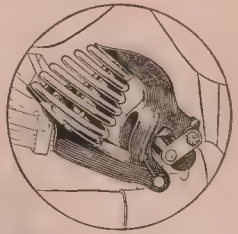
Per Set

Better-Ford Springs—They make the Ford a Better Ford $20 00

Note: When ordering, specify if wanted for Ford Runabout or Touring Car



Front



Rear

MAKES EVERY ROAD A BOULEVARD

The pivoting of the Van Briggle Shock Absorber is from the cycle, of the spring. When the jolt comes down the car spring straightens out, causing the fulcrum in the shock absorber to compress the shock absorber spring. The radius of the Van Briggle Shock Absorber remains the same at all times; there is no change in the axis of the shock absorber for the reason that the base is pivoted at the same point as the upper part of the shock absorber. The rebound is caught by the reverse movement of the shock absorber. The spring base of shock absorbers rests freely on top of the car spring which allows free action of spring leaves and does not cramp or bind spring.

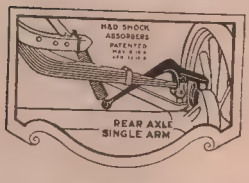
The Van Briggle Shock Absorber protects and cushions the four corners of your car against rebounds, side sways, bumps, jolts and jars. This protection lessens the strain and wrench of your car and increases mileage on tires, and saves in the general upkeep.

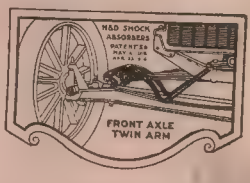
The Van Briggle Shock Absorber is installed without removing any wheel, tie rods or perch hangers. No drilling or tapping necessary. No standard parts removed from car. Van Briggle Shock Absorbers are assembled at the factory. Installation simple and easy.

Per Set of Four

Van Briggle Shock Absorber $15 00

ACCESSORIES FOR FORD AUTOMOILES





SHOCK ABSORBERS

A Simple and Efficient Shock Absorber of the Lever-Fulcrum or Cam-lever Type, sturdy construction and durable, with nothing to get out of order. Eliminates all the side sway and makes the Car easily handled in Rough Mud and Ice Roads. Easily Applied. No Fittings Necessary. Material and Workmanship Fully Guaranteed.

Lever Arms of Finest Grade Close Grained Malleable Iron, Heat Treated and Annealed. Rear Hangers are very best Drop-forged Steel. All Bearings in Lever Arms are Bronze Bushed and can be easily replaced when worn. Highest Quality, Heat-treated, Oil-tempered, Vanadium Steel Springs, will not break or lose their Elasticity. Extra Heavy Steel Hooks for Attaching Springs to Frame; BAKED BLACK ENAMELLED FINISH.

ACCESSORIES FOR FORD AUTOMOBILES

HALLADAY SHOCK ABSORBERS

A Shock Absorber that Directly Suspends the Car on Sensitive Springs of sufficient capacity to Absorb the Vibration and Prevent Rebound. No Light Breakable Parts or Parts to be Lost. No Frictional Bearings to Interfere with the Spring Action.

The Springs in the HALLADAY Shock Absorbers are larger than any others ever used for similar purposes and are of ample capacity to absorb all the jolts and jars, thereby removing the cause of rebound.

Put in plain figures, if the axle of a Ford car be raised or the body suddenly dropped three inches, the most of such movement that any other shock absorber will take up is less than one inch with a deflection of the leaf spring of two inches, a recoil of practically four inches resulting therefrom.

Under similar conditions, the HALLADAY will absorb over 2½ inches of the movement, leaving only a small amount of spring displacement from which the recoil is too slight to be noticed.

When the cause does not exist, there can be no result.

If the leaf spring is not noticeably displaced, there can be no recoil.

The HALLADAY removes the cause, therefore the rebound never happens.

BURGESS REBOUND CHECK AND SHOCK ABSORBER

Will Increase Your Car Mileage 20 to 40 Per Cent. Will Decrease Your Repair Bills and Prolong the Life of Your Car and Every Mile You Ride will be Comfortable

This Quickly Applied, Simple Device, Controls the Rebound and at the same time Absorbs Vibration and Increases the Range of your car. Makes a Ford the Easiest Riding Car. You can Ride Cobbles or Rough Country Roads with Absolute Comfort. The Wheels Stay on the Road. Makes the Car Easier to Steer, and Safer. Increases the Range of your Springs and at the same time controls them.

The Action of this wonderful device is so smooth that it stops the vibration of your steering wheel, mud guards and lamps as if they had been specially braced and in this manner eliminates noise and rattling.

Burgess Rebound Check and Shock Absorbers ride the car and passengers directly on four coil springs, which are so mounted that no guides or other retarding mechanism is required. These springs will absorb thirty periodic vibrations per second, more than twice as many as any other type of spring will absorb.

The arms on which these springs are mounted are arranged to control the recoil of the leaf spring by shifting the load at the moment of recoil from the top of the spring to the center, or the rebound point on. This positively eliminates all rebound. The manner of attaching these arms does not bind the leaves of the car springs, or interfere with the working of any other part of the Ford car, but greatly increases the range of the leaf springs, which, in combination with the coil springs, produces the wonderfully easy riding.

Vibration in the engine of any car. The quick acting conical springs of the Burgess Rebound Check and Shock Absorber smother the jolts before they can reach the vital parts of the motor and body. It is a fact which you can prove to yourself that a Ford equipped with this device does not vibrate when the motor is running idle.

The manufacturers of this device do not deem it a possible to entirely eliminate side sway. If this were the best practice, the engineers who build the Ford would eliminate it. The Burgess Rebound Check and Shock Absorber is designed to reproduce the exact action of the shackles on the Ford. This eliminates all objectionable features often found in shock absorbers for Ford cars. There is no effect on the steering or increase in side sway.

Each set is sold with the guarantee of perfection in material and workmanship and the fulfillment in actual performance of every statement made in their advertising, provided installation is as per instructions.

Good-bye to the Old Farm!

Who'll take his place?

Never before has the farmer been so eager to avail himself of labor-saving devices as right now—for the simple reason that labor was never so scarce. The farmer boy and the farm hand are deserting their jobs by the thousands to seek positions in the big towns.

If you are wise you will take advantage of this situation by selling to the farmers in your locality that greatest of all labor-savers—

AETNA EXPLOSIVES

Our Dealer-Helps will aid you in pointing out to him the various ways in which Aetna Explosives may be used to make up the shortage in labor—stump blasting, rock blasting, ditch digging, tree planting, subsoil blasting, post-hole digging, etc., etc.

A few sticks of Aetna here and there do the work of a dozen farm hands, and do it quicker, better and cheaper.

Don't let this profitable business slip through your fingers. We will show you how you can become a successful Aetna Dealer. Write us without delay for full particulars.

NOTE: We ship direct to your customer in case you have no facilities for keeping Aetna Explosives in stock.

Become an Aetna Dealer—Today!

W3711 — Copper body, capacity 6 sheets. Crated, 260 lbs. Each, **$124.00**

ALAMO TYPE M GASOLINE AND DISTILLATE ENGINES WITH PORTABLE SAWING RIGS

MOUNTED ON STEEL TRUCKS

4½, 6½, 9 H. P.

Back View

Front View

Equipped with No. 41 all steel sliding table, unless ordered with swing table.

The engines used on these sawing outfits are the regular Alamo Type M.

Truck—The same specifications apply to the truck as with the mounted engine, only the channel beams are made longer to receive the saw frame. These channel beams are 10 feet long, thus enabling the use of a belt of sufficient length. Wheel base, 7 feet, 10 inches.

Saw Frame—Steel sliding table styles firmly bolted to the channel beams. It will take a saw blade up to 30 inches in diameter. The saw arbor is 1½ inches in diameter. The pulley on the same is 6x6 inches. Saw blades furnished with each outfit, belting is included. If required, the saw frame can easily be removed from the channel beam, so that the engine can be used for other work. Equipped regularly with 26-inch saw.

Equipment—The engine is furnished with the same equipment as with the Alamo Type M mounted engines.

Pulleys—Engines are supplied with friction clutch pulley of suitable diameter, which gives the saw the proper speed.

Specifications and Equipment

For portable outfits equipped with kerosene engines add difference in price of engine.

ALAMO TYPE M GASOLINE AND DISTILLATE PORTABLE ENGINE OUTFITS

4½, 6½, 9, 12 AND 15 H. P.

The above illustration is of the 4½, 6½, 9, 12 and 15 horsepower Alamo gasoline and distillate engines, which are the favorite sizes for use in ordinary farm work. All kinds of work can be done, from the running of a pumping plant to the operating of a wood saw or ensilage or feed cutter. These engines may be run on a minimum amount of fuel and yet have power enough for all but the heaviest class of farm machinery. For an all-round purpose engine there is nothing better made than the Alamo Type M distillate or gasoline engine.

The above engines have been pronounced by the best critics as being the most perfect engine yet produced for general utility purposes. Its perfect balance, ease of starting in all kinds of weather, and its simplicity and substantial construction is best appreciated by those who have used these engines under the most severe conditions.

Trucks—Made completely of steel and fully guaranteed; channel beams carrying engines very stiff and rigid; axles made of one piece of solid steel.

All mounted outfits are shipped with pole, but singletrees and doubletrees are not included.

Pulleys—Regular equipment includes plain, solid pulleys. Friction clutches are extra if desired. See page 5565.

Alamo Type M portable engines are regularly equipped without extra charge with muffler attached, Webster oscillating magneto, wrenches, oilers, oil can and can of gas engine oil. Small sizes have fuel tank in the base of the engine of sufficient capacity for one day's run. 12 horsepower and 15 horsepower engines are supplied with 60 gallon outside fuel tank. **All sizes furnished with iron pulley.**

Raise of Bar, In.	17½
Size of Bar, In.	2¼x1¾
Weight, Lbs.	98
Each	$40.00

SOCKET WRENCH SETS
ALLEN FRICTION

Wrench made of steel drop-forgings, nickel plated throughout. Its simplicity is obvious. The handle operates directly against a revolving socket in the head, without use of ratchet, springs, pawls, balls, etc. By means of the long and short extension pieces the sockets, which are pressed steel, specially heat treated and hardened, are attached to the socket in the wrench head. The wrench can be used in small spaces where a ratchet would be useless as the slightest movement of the handle acts on the socket instantaneously.

SET NO. 9

For small runabouts, motor boats, etc.

1 10-inch Allen friction wrench.
1 1⅞-inch short extension.
1 8⅞-inch long extension.
1 29/32-inch spark plug socket.
8 sockets, 1 each of the following hexagon sizes: 15/32, 17/32, 19/32, 11/16, 23/32, 25/32, 31/32 and 1-5/32-inch.

Set No. 9—In hardwood box.
Wt. each, 3¼ lbs. . . Each $9.50

SET NO. 29

Sets No. 29 differs from No. 9 in that they contain a universal —double swivel— joint, making it possible to apply the wrench in almost any position, a screwdriver and a large variety of sockets. The screwdriver fits directly into the socket in the wrench head.

Set No. 29—In hardwood box. Weight each, 4 lbs.
Each $8.50

SET NO. 21

For touring cars, trucks, etc.

1 10-inch Allen friction wrench.
1 1⅞-inch short extension.
1 7⅛-inch long extension.
1 29/32-inch spark plug socket.
1 universal joint.
1 1⅛-inch screwdriver.
20 sockets, 1 each of the following hexagon sizes: 15/32, ½, 17/32, 19/32, ⅝, 21/32, 11/16, 23/32, 25/32, 13/16, 27/32, ⅞, 29/32, 31/32, 1, 1-1/32, 1-3/32, 1-5/32, and 1-9/32-inch and 1 socket 17/32-inch square.

Set No. 21—In hardwood box.. Weight each, 6¼ lbs.
Each $13.00

STICKIT

Consists of a double ended ratchet wrench, with seven strong stamped steel sockets strung on a square steel shank. One end of the wrench fits the shank, the other, the sockets. Exceedingly compact and practical set. Will fit the following sizes of nuts and cap screws: Hexagonal, 1-⅛, 1-¼, ⅜, ½, ⅝, ¾, ⅞. Square, ¼, ⅜, ½.

No.	8
Length, inch	14
Weight each, lbs.	2¼
Each	$4.00

In canvas case.

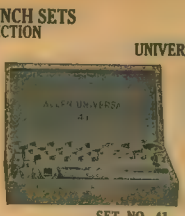
K. & S. RATCHET

A strong, compact light tool, operating in close quarters where heavier wrenches would be useless. Forged steel wrench. Ratchet reversed by moving pawl from one side to other without removing tool from work. Case hardened sockets. Tool steel screwdriver bits.

1 7-inch wrench handle.
1 6-inch extension bar.
2 screwdriver bits.
7 sockets for bolts and nuts, 5/16 to ⅝-inch, inclusive.

Set No. K8—In compact, strong black cloth case with snap fastening cover. Weight each, 1¾ lbs. . . . . Each $4.50

UNIVERSAL



Wrench made of best steel drop-forging, all parts hardened. The head contains a ratchet action, ball or universal point or socket which permits use of the handle in many positions. The extra universal double swivel joint contained in the set makes it possible to use the wrench almost anywhere. Sockets are pressed steel, specially heat treated and hardened and are attached by means of the extension pieces.

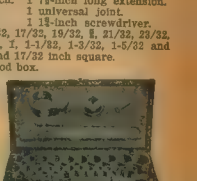
SET NO. 41

For touring cars, trucks, etc.

1 8⅞-inch Allen universal wrench.
1 1⅞-inch short extension.
1 29/32-inch spark plug socket.
1 7⅛-inch long extension.
1 universal joint.
1 1⅛-inch screwdriver.
20 sockets, 1 each ⅜, 13/32, 15/32, 17/32, 19/32, ⅝, 21/32, 23/32, 25/32, 13/16, 27/32, 29/32, 21/32, 1, 1-1/32, 1-3/32, 1-5/32 and 1-9/32 inch hexagon, and 13/32 and 17/32 inch square.

Set No. 41—In substantial hardwood box.
Weight each, 6½ lbs. Each $12.00

SET NO. 31



For touring cars, trucks, etc

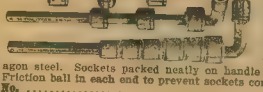
Contents

1 10-inch Allen friction wrench.
1 1⅞-inch short extension.
1 9⅞-inch long extension.
1 29/32-inch spark plug socket.
1 universal joint.
1 1⅛-inch screwdriver.
Thirty sockets, 1 each of ⅜ hexagon, then in 32nds to and including 1-⅛, also 1-⅛, 1-¼, 1-⅜ hexagon, and ½, ⅝ and ¾-inch square.

Set No. 31—In substantial hardwood box. Weight each 7¼ lbs. . . . . Each $16.00

All Allen sets are packed in varnished hardwood hinged chests.

HEXALL



Comprises seven steel sockets, ⅜ to ¾-inch. Made from bar steel, case hardened. Handle made from ½-inch hexagon steel. Sockets packed neatly on handle when not in use. Friction ball in each end to prevent sockets coming off.

ALVORD REAMERS

SPECIAL FOR FORD CARS

New No. 2713-2714, Old No. 211—Ford Spindle and Spindle Arm Bushing Reamer. This reamer is made to ream these bushings in perfect alignment at one operation. The long section is for the spindle body bushing and the short portion is for the spindle arm bushing. Straight flutes. Weight each, ¾ lb.

Each $3.00

This reamer is designed to ream the three bushings of the crankshaft at one operation and by this means saves two-thirds of the time in reaming. It is absolutely necessary to use a tool of this design to secure perfect alignment of the bearings. In operation, be sure to ream the three bushings at the same time instead of running the reamer from one end of the crankshaft through to the other end. Length over all, 26 inches. The three lands or cutting portion are staggered to prevent chattering.

Nos. 3031-3032-3033—Crank Shaft or Main Bearing Bushing Reamer ..... Each $22.50

These reamers are made the exact size necessary for the different parts, and will be found very convenient and highly useful tools for the garage. Fully guaranteed as to material and workmanship. Each reamer is marked with corresponding Ford bushing number.

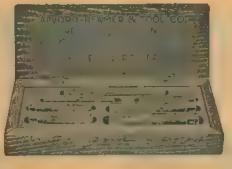
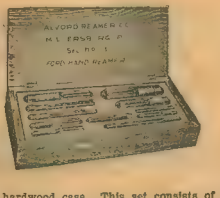
No. 3820—Front Spring Perch Bushing		
No. 3844—Rear Spring Perch Bushing	"	2.75
No. 3844—See Reamer 3820-3844.		



No. 13—Set in hardwood case. This set consists of 7 reamers used in making general repairs to Ford automobiles and fits numbers of bushings as follows:

No. 2713-14—Spindle and spindle arm bushing.
No. 2540—D. S. front housing bushing.
No. 3820-3844—Front and rear spring perch bushing.
No. 3042-3044-3545—Cam shaft bearings and steering post bracket bushings.
No. 2559—Hub cam shaft bushing.
No. 3059½—Push rod bushing.
No. 3022½—Wrist pin or piston pin bushing.

Per set $23.00



No. 11—In hardwood case. This set consists of 11 reamers used most in garages and fits numbers of bushings as follows:

No. 2525B—Differential pinion bushing.
No. 2527—Differential spider bushing.
No. 2540—D. S. front housing bushing.
No. 2559—Hub cam shaft bushing.
No. 3044-3042-3545—Rear and front cam shaft and steering post bracket bushing.
No. 3309—Slow speed gear bushing.
No. 2713-14—Ford spindle and spindle arm bushing.
No. 3022½—Wrist pin or piston pin bushing.
No. 3314½—Transmission gear bushing.
No. 3521—Steering gear pinion bushing.
No. 3820-3844—Front and rear spring perch bushing.

Per set $45.00

FORD REAMER SETS

No. 14 (Old No. 8)—In hardwood case. Contains one each of the following:

No. 2713-14—Ford spindle and spindle arm bushing.
No. 3314½—Transmission gear bushing.
No. 3022½—Wrist pin or piston pin bushing.

Per set $10.00

"AMERICAN FLYER" MECHANICAL TRAINS

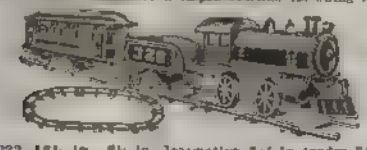
"The Train With a Guarantee"

Made in U. S. A. of the highest grade materials. Cars are reproductions of the latest American railroad equipment. Every feature of construction carefully tested. Backed by the universal guarantee of a straight, reliable manufacturer. New models. Springs adjusted to proper strength to avoid jumping track and yet obtain maximum speed. Latest chief device and exclusive feature of these trains prevents breaking of springs from overwinding. Many improvements have made of trouble experienced with American Flyer trains in the past. Each engine bottom is fitted with a screw to adjust the armature so that it will run smoothly. Other improvements, including bushings in frames, wide steel pilot wheels, steel jump track, curved over rubber wire, new and improved track sporting. Motors have hardened steel pinion gears, which also many times harder than brass gears. Made by AMERICAN FLYER TRAINS are the best of other mechanical imperfections. Each set in sealed, dustproof colored cardboard box.

"Made in America" American Flyer

The Train with the Guarantee — Registered U.S. Patent Office — MINIATURE RAILROADS

All "American Flyer" trains are guaranteed against defective, imperfect items.



F3222—16½ in., 6½ in. locomotive, 8¼ in. tender 8¼ in. passenger car 8 sections oval track, 32 in. circumference. 1 set in box. Set. **$1.45**

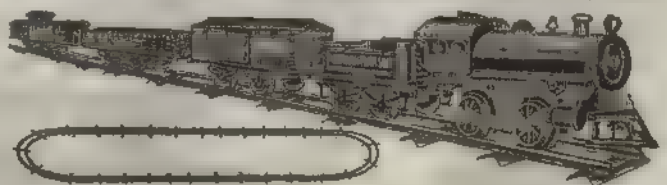
F3224—24 in. EXTRA LARGE track EQUIPMENT 11 sections of track and curved with CROSSOVER forming figure of 8 in circle. 6¾ in. engine, 4 in. tender 6½ in. passenger and baggage cars with sliding doors. 1 set in box. Set **$2.50**

F3223—18 in., 6½ in. speed governed engine 4 in. tender 6½ in. parlor car, 10 sections track, oval 108 in. circum. 1 set in box. Set. **$1.85**

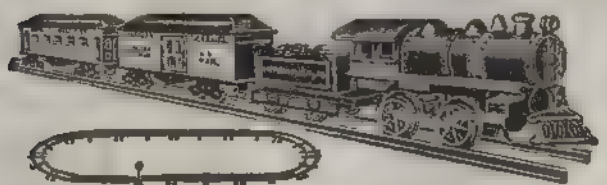
F3223—24 in., 6½ in. speed governed engine, nickeled piston rods, brake 4 in. tender 6½ in. baggage and passenger cars, 10 sections track, oval 108 in. circum. 1 set in box. Set. **$2.00**

F3230—24½ in., 6½ in. speed governed engine, nickeled piston rods, brake 4 in. tender 6½ in. passenger and baggage cars, 12 pieces curved and straight track, switch, oval and circle length of track 168 in. 1 set in box. Set. **$3.00**

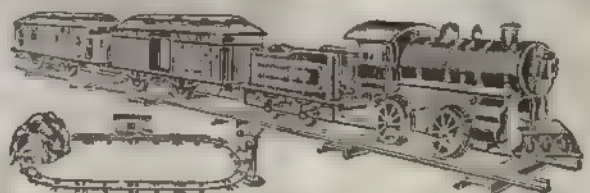
F3228—26½ in., extra LARGE CARS and EXTRA EQUIPMENT. 12 sections curved and straight track forming oval 134 in., 2 single arm SEMAPHORES 6¾ in. speed governed engine, piston rods, brake, 4 in. tender, 6½ in. passenger and baggage car with sliding doors. 1 set in box. Set **$2.75**



F3213—34 in., 6¾ in. speed governed engine, nickeled piston rods, brake 4 in. tender 6½ in. box car with 4 big doors, stock car and caboose. 12 pieced curved and straight track forming oval 108 in. circum. 1 set in box. Set **$2.75**



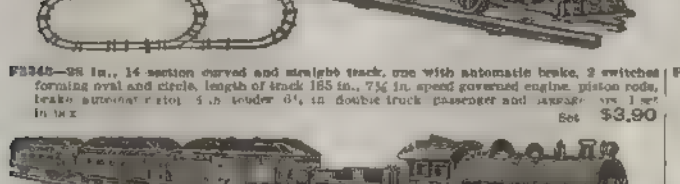
F3229—27 in., 12 sections curved and straight track with automatic stop, forming oval 114 in. circum. Largest 7¼ in. speed governed engine, piston rods, brake and AUTOMATIC STOP, 4 in. tender, 6½ in. passenger and baggage car with sliding doors, free swinging DOUBLE TRUCKS and disappearing couplers. 1 set in box. Set **$3.40**



F3219—27 in., 12 sections curved and straight track forming oval 114 in. circum. 1 large paper mache TUNNEL painted to represent mountain scene, 2 steel SEMAPHORES, nickel plated piston rod brake, AUTOMATIC STOP, 6¾ in. engine, 4 in. tender, 6½ in. passenger & baggage car with SLIDING doors. 1 set in box. Set. **$3.25**

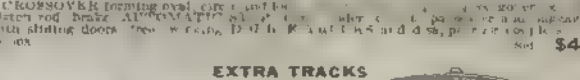
F3245—28 in., 14 section curved and straight track, one with automatic brake, 2 switches forming oval and circle, length of track 185 in., 7¾ in. speed governed engine, piston rods, brake automatic stop, 6½ in. tender, 6¼ in. double truck passenger and baggage cars, 1 set in box. Set **$3.90**

F3239—28 in., 18 sections curved and straight track, 1 automatic brake section, 2 SWITCHES, 1 CROSSOVER forming oval, circle and figure 8, length of track 252 in., 7¾ in. speed governed engine, piston rods, brake AUTOMATIC STOP, 6½ in. tender, 6¼ in. passenger and baggage car with sliding doors, free wheeling DOUBLE TRUCKS and disappearing couplers, 1 set in box. Set **$4.65**



F3235—33½ in., 7¾ in. speed governed engine, piston rods, brake, automatic stop, 6½ in. tender, double truck passenger & baggage cars, 1 set in box. Set **$7.35**

EXTRA TRACKS



For American Flyer, Hummer and practically all mechanical trains. Length of each machine cut graded tracks, substantially made.

Straight—
F3246—1 doz. in box . . . . . Doz. **75c**

Curved—
F3247—1 doz. to box . . . . . Doz. **75c**

HOT WATER BOTTLES

METAL: WILL NOT LEAK

Can be Filled with Boiling Water, which would mean ruin to a rubber bottle. It is particularly useful, as a Foot Warmer for the Bed or Automobile, or for the invalid who wishes to sit out of doors. For ordinary use—a small cup of boiling water, which can be heated over the gas jet in a few minutes, will fill the Metal Bottle with Steam and give sufficient heat for a long time.

	Per Dozen
No. 100—Nickel Plated Metal Bottle with Screwed Stopper; Size of Bottle 8x2 in.; Metal Bag is Encased in a Flannel Bag with Draw String Opening	$24.00
One in a Box, Weight per Dozen 10 Lbs.

Matchless **REVERSED LEVER** Saw Set

Combines the revolving anvil and indicator dial with other features that give it marked practical advantages.

Lever is placed below the body of the Saw Set, where it is operated by moving the fingers only, doing away with the motion of the entire hand necessary with the older types

Build up sales with CHICAGO SCALES

Known for nearly sixty years for their accuracy and dependability, Chicago Scales today are building bigger profits for dealers than ever before. Always of uniform high quality, they have earned an enviable reputation from coast to coast as a line of staple sellers.

The dealer who stocks Chicago Scales is building *permanent* profits, because these pioneer scales are not only good sellers—but they *stay sold.*

The Gibraltar Portable Platform Scale

A sturdy utility scale with arrow-point brass beam, sliding poise and set screw. Capacity 600 to 1500 lbs. Platform sizes, 16 in. x 24 in. to 19 in. x 28 in. Double beam if desired. Equipped with substantial wheels. One of the handsomest, most dependable scales on the market. Guaranteed for accuracy and reliability. Positively complies with the laws of weights and measures in all the states of the Union. Attractively finished in suave blue and gold.

Chicago Grocer Counter Scale

With Polished Brass Scoop

High class, accurate scale, especially built for fine Grocers, Coffee Dealers and Markets. Double beam capacity 250 lbs. Lower bar marked in ½ lbs. to 50 lbs. upper in single ounces to 16 lbs. Heavy brass sliding poises. All parts and bearings of specially tempered tool steel. Guaranteed to comply with all state laws of weights and measures. With brass or tin scoop beautifully finished in silver gray and gold.

Ask your jobber about Chicago Scales, or write direct for details of our liberal dealer proposition, free sales helps and 24-hour shipping service to dealers.

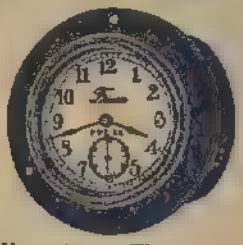
AUTOMOBILE CLOCKS

The secret of the accuracy and durability of a keyless auto clock is the infinite exactness with which it is made. Micrometers that are the extreme of precision quickly detect the most minute variation in size. Each part is carefully tested. The plates, pinions, wheels—every part of the movement is solidly put together. Then comes a rigorous testing of the complete clock. When a clock has passed through the testing and inspection department, we guarantee that you will find it more than an "automobile clock"—a scientific, accurate timepiece that is a mark of the distinctively up-to-the-minute completely equipped automobile.

FRISCO
THIRTY HOUR. STEM WIND. COWL TYPE



Has concealed winding stem. The movement and its case can be removed from the outer case when necessary to wind it. The outer case is attached to the instrument board by three nickel plated screws. The movement is an accurate thirty hour type strongly and firmly assembled, especially for automobile use. Finished in black and nickel. 2¼-inch white dial with black numerals.

Frisco No. 2.....**Each $5.50**

DENVER
EIGHT DAY. KEY WIND. COWL TYPE

A high grade lever type movement accurately regulated makes the Denver model an ideal auto clock. A white celluloid dial 2¾ inches wide is used in place of the silver dial usually found on auto clocks. Finished in black and nickel.

Denver.....**Each $8.25**

MODEL 12
EIGHT DAY. RIM WIND AND SET. COWL TYPE

Just the proper size to install right in front of the wheel. The dial is only 2¼ inches in diameter, but is easily seen from the rear seat.

No. 12A—Black and nickel, with silver dial.

Each.....**$14.00**

No. 12B—All nickel, with black dial, luminous numerals and hands.

Each.....**$16.25**

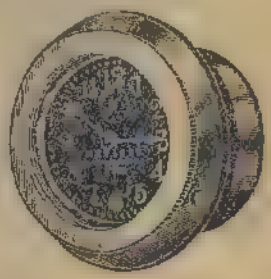
EIGHT DAY. RIM WIND AND SET. COWL TYPE
MODEL 9

Equipped with a fine quick beat, accurate eight day movement that will resist any shock or strain and yet keep accurate time. Dial 2¾ inches in diameter.

No. 9—Black and nickel, silver dial.....**Each $15.50**

No. 9C—Black and nickel, with black dial, luminous numerals and hands.....**Each $17.50**

POPOUT



Absolutely flush with instrument board. Will spring out just far enough to be easily wound and set. After you have wound or set it, press firmly against the face of the clock and when it has been pushed back flush with the instrument board a slight turn in a counter clockwise direction will lock the clock securely in place. Finished in black and nickel. Dial 2¾ inches. Black dial, luminous numerals and hands.

Popout.....**Each $19 00**

AEROPLANE

A clock of this type and design was selected by the United States navy for use on hydroplanes during the war. It had to stand every kind of strain and shock—and it had to be waterproof. It is essentially an aeroplane clock, but it has proven exceptionally well adapted to automobiles. The case is black enamel with a nickel winding rim. The dial is black with luminous numerals and hands. You can tell the time easily and accurately in the dark.

Aeroplane.....**Each $17.00**

AUTO-CANS

BOYCO

AUTO TYPE

For use on running board. Made of heavy galvanized iron with heavy blanket covering. Polished zinc mouthpiece. Cork lined cap. Drop handle on top.

Nos.	1	2	3
Capacity, gallons	1	2	3
Dozen in carton	1	1	½
Weight per carton, lbs.	29¼	39	24
Net weight per dozen, lbs.	22	28	36
Per dozen	$26.50	$1 50	$7 00

TRUCK TYPE

Same as auto type, except heavier and of 5 gallon capacity. No holder included in price.

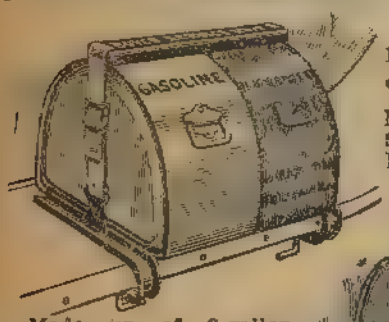
No. 5
Net weight dozen, lbs 65
Per dozen $46.25

• Special running board holder for No. 5.

Net weight dozen, lbs 48
Per dozen $49.50

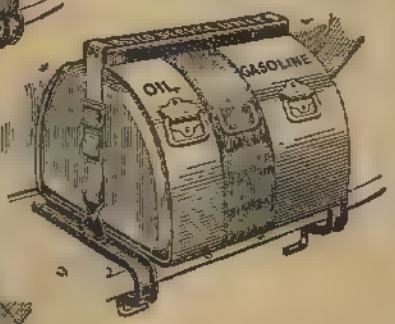
SERVICE UNITS

Combine in convenient form auto cans for gasoline, oil and water, the units held snugly to the running board by a substantial holder. The gasoline auto can is painted red, the oil can is painted blue and the water can is covered with a heavy blanket.



Made up of 2-gallon gasoline and 2-gallon water autocans. Complete with holder.

No. 22
Shipping weight, lbs.... 10
Each $7.00



Made up of 2-gallon gasoline, 1-gallon oil and 1-gallon water autocans. Complete with holder.

No. 112
Shipping weight, lbs. 12
Each $8.10

Made up of 2-gallon gasoline, 1-gallon oil and 2-gallon water autocans. Complete with holder.

No. 212
Shipping weight, lbs. 13
Each $8.75

CANTEEN HOLDERS

LINCOLN

Black enameled iron with web strap. Simple in construction. Attached to any running board with thumb screws.

No. 60—Weight 4 lbs.
Per dozen $38.00

One in a box.

BOYCO

Easily attached to running board by means of two adjustable clamps. Made of heavy material and finished in baked black enamel.

For 1 8-quart canteen. Size, 5½x6x11¾ inches. Weight, 54 lbs.
No. 8.....Per dozen $32.75

For 2 6-quart canteens. Size, 9x6x11 inches. Weight, 60 lbs.
No. 66.....Per dozen $45.50

TIPPING

The most convenient canteen holder combination ever offered the public. All you have to do is to loosen the strap and tip the canteen, which, once in place, cannot slip or work loose from the holder, although it can be easily removed by lifting. The holder clamps to the running board, and is locked by a sliding lock, automatically released when the strap which passes through the channel and protects the cap is loosened. Finished in dull baked japan. Canteen is the regular Boyco Indestructo, capacity 2 gallons. Packed complete, canteen and holder in fibre case.

No. 81
Weight per dozen, lbs. 90
Per dozen $61.75

WATER BAGS

AUTO

Closed top. Heavy stitched canvas. Porcelain or iron mouthpiece. Galvanized "D" rings for attaching rope. Inside protected seams. Has top brace or spreader.

No. ..... A 2
Capacity, gallons 2
Size, inch 12x16
Net weight per dozen, lbs. 11
Per dozen $35.00

Shipping weight water bags adds 11% to net weight.

AUTO HORNS

KLAXON

The Klaxon horns are the recognized public safety signal—the automobile warning for the city and country roads. All types furnished with push buttons and sufficient cable for installation.

Klaxons are regularly finished in all black. For all other finishes such as black and nickel, black and brass, etc., add $1.00 to the list prices. Electric Klaxons can be operated from dry cells or storage batteries. They are regularly wound for 6 volts. For special voltage up to 21 volts no extra charge.

KLAXON 12L

This type of Klaxon is the Underhood model. Electric operation. All black enamel finish. Can also be used as outside model.

No.	12 L
Volts	6
Weight, lbs	11
Each	$18.00

KLAXON 6

The No. 6 is the smaller type of the Klaxon, but operated on the same principle. Electric operation. All black enamel finish. 6 volts will be furnished unless otherwise ordered. 12 volts required on Dodge

No. 6—		
Volts	6	12
Weight, lbs	6	6
Each	$9 50	9.50

KLAXON 5

The same mechanically as the Klaxon 6, but has a torpedo projector. Sold stripped, without wire, push button or bracket. Special screws are furnished for individual mountings. In ordering specify for what cars they are intended and whether for 12-volt or single wire system. Equipped with Buick and Dodge brackets.

No. 5—	For Buick	For Dodge
Volts	6	12
Weight, lbs	6	6
Each	$9.00	9.00

KLAXON 5F
FORD TYPE

A warning signal, equipped with a bracket that will allow it to be installed simply and easily on Ford cars that are coming through equipped with self-starters.

No.	5 F
Weight, lbs	6
Each	$8.00

KLAXON 3

The No. 3 is for cars not equipped with batteries, but produces the same sound as electric horns. All black enamel finish.

No.	3
Weight, lbs	5
Each	$5.75

One in a wooden box.

KLAXON 3-V

Vertical push rod. In every other respect the same as Klaxon 3.

No.	3 V
Weight, lbs	5
Each	$5.75

NEW TONE

The various models of Newtone Motor Driven Horns offer the widest selection of a thoroughly dependable warning signal. Newtone horns are regularly wound for 6 volts, requiring the minimum of current consumption to operate. Special voltages may be obtained at a slight additional cost. Standard finish is all black, and all horns are furnished complete and ready for installation. The guarantee of the manufacturers insures permanent satisfaction in every respect. Extremely simple in construction. If necessary repairs can be made by any one.

6 and 12 volts carried in stock. 6 volts will be shipped unless otherwise ordered.

SUPERIOR UNDER HOOD MODEL

Both 6 and 12-Volt

Weight each, lbs. 4
Each $7.50

One in a carton; 10 cartons in a shipping container.

SUPERIOR OUTSIDE MODEL

Weight each, lbs. 4
Each $7.50

One in a carton; 10 cartons in a shipping container.

MODEL M, UNDER HOOD MODEL

Weight each, lbs. 6½
Each $13 50

One in a carton; 5 cartons in a shipping container.

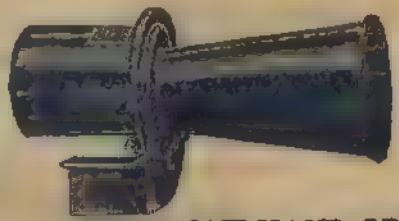
MODEL 9, UNDER HOOD MODEL
FOR FORD CARS



Weight each, lbs. 4¼
Each $7.00

One in carton; 10 cartons in a shipping container.

HANDPHONE HAND OPERATED SIGNALS

Handphones are compactly and rigidly constructed and will withstand the most severe service. The rattling sound due to vibration and so common in mechanical horns does not exist in Handphones. The tone is loud and penetrating and is produced by only a slight pressure on the plunger. Finished in all black, and fully guaranteed.

AUTOMOBILE MODEL

Weight each, lbs. 3½
Each $4.50

One in a carton; 10 cartons in a shipping container.

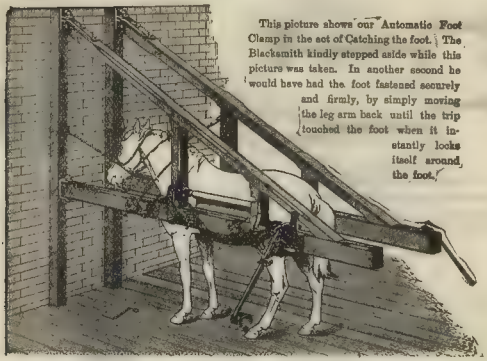
BARCUS HORSE STOCKS



This picture shows our Automatic Foot Clamp in the act of Catching the foot. The Blacksmith kindly stepped aside while this picture was taken. In another second he would have had the foot fastened securely and firmly, by simply moving the leg arm back until the trip touched the foot when it instantly looks itself around the foot.

We answer the following questions, which are often asked

1. What is the Price of your Stocks complete? $46.00.
2. How long is the frame when in use? 10 feet.
3. Do they swing out of the way when not in use? Yes, both ways up against the wall.
4. What keeps the Stocks from swinging when in use? A Brace from rear end of frame to ceiling or floor. See cut.
5. How many Leg Arms go with every Machine? One only.
6. Do you advise using two Leg Arms? Yes, and some use more, although one is used very successfully.
7. What does an extra Leg Arm cost. $20.00.
8. Can you handle the hind foot as well as the front foot? Yes.
9. Is there danger of a horse getting hurt in the Stocks? No, the Veterinaries use them.
10. Do you give directions for setting up and using Stocks? Yes, very complete. Be sure to read them
11. What is the Freight on the Stocks? Not very much, as they are billed out at 450 lbs., knocked down and third-class rate. See that you are not overcharged on freight.

For the Blacksmith who wants the most convenient, the easiest, the most simple and quickest way to fasten a horse firmly and safely from any possible danger to horse or man. In this progressive age he cannot afford to match his strength against the strength of a horse. Neither can he afford to place his life in jeopardy or be crippled or broken in health in the prime of life. Yet how many blacksmiths are broken down at 50. Hardly a week passes but we hear of one, either getting killed or crippled, while shoeing a vicious horse. We have received a number of letters from blacksmiths saying, "If I had had those stocks when I commenced running a shop I would be a much better man than I am."

The Barcus Stock is the only machine ever made that does not use a strap or rope around the foot or ankle to hold it. It is the only shock made that you can lift the foot straight up as a blacksmith does by hand, then swing it backward or forward to get at the bottom or top. It is the only machine that holds the foot perfectly solid where you want it and does not skin or injure the ankle. A Girth 32 in. wide, prevents the animal from lying down.

ROOF VENTILATORS

For Use on Public Buildings, Factories, Foundries, Breweries, Shops, Stables, Steamboats and Residences

CROWN

The Strongest, Neatest Appearing and Most Efficient Ventilator Made

Particularly well adapted for use in connection with Ventilating Systems in Large Buildings, such as School Houses, Churches, Halls, etc., as there is **No Band About This Top to Restrict the Free Exit of Air;** on account of the peculiar interior and wide flange construction which are the special patented features, this hand is not necessary and the wind in passing through the top, Acts Like an Ejector Causing a Strong Suction in the Pipe from Below.

Size, In.	12	14	16	18	20	24
Weight, Lbs.	10	24	30	45	53	90
Each	$6.75	13.00	20 00	27 00	35.00	40.00
Size, In.	30	36	40	48	60	72
Weight, Lbs.	145	222	303	575	1080	1173
Each	$65.00	120.00	180.00	240.00	300.00	480.00

Made of Heavy Galvanized Iron, Strongly Riveted and Jointed. A Combination of Strength and Efficiency, a Ventilator that Eliminates Foul Air and Brings New, Fresh, Invigorating Air Into a Building.

Air Currents Rush in from Below Between the Weather Band and Curved Deflector, and Force Upward and Outward the Warm, Impure Air they meet coming up the Air Shaft.

Size, In.	10	12	14	16	18
Weight Each, Lbs.	15	20	25	30	50
Each	$5.00	5.80	6.00	8.40	10.30
Size, In.	20	24	30	36

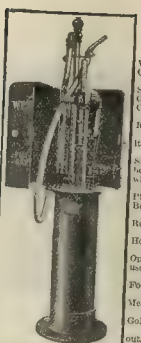
GASOLINE STORAGE OUTFITS

BIG GUSHER ROADWAY

Pumps Measures 1, 2, 3, 4 or 5 Gallons



Pumps and Tanks are Tested, Inspected and Labeled by the National Board of Fire Underwriters

Cabinet—The Cabinet Encasing Pump Is Built of ⅞ in. Iron; the Doors Overlap, making It Weather Proof. Doors are Fitted with Best Corbin Six-Tumbler Lock; a Small Door at Bottom of Pedestal Gives Access to Pipe Union

Pump—Is of our Long Distance Type, Adjusted to Measure 1, 2, 3, 4 or 5 Gallons at a Stroke 9 in Seamless Brass Cylinder, 3 in Brass Piston Rod, Heavy Brass Valves and Starting Box; Cut Steel Gears, Bronzed Bushed and Protected by Gear Guard; Case Hardened Bearings and Spindles; Normal Capacity 25 Gallons per Minute.

Automatic Gear Shift—For Quick Return of Rack Bar, which can be Reversed at a Ratio of One Reverse Motion of the Handle to Five Forward Turns

Gallon Meter—Keeps an Accurate Check on all Gasoline drawn up to 99,999 Gallons, at which Point It Reverts to 0000. Large Legible Figures Stamped in Iron Metal. Built with the Precision of a Watch Seals the Gasoline from Water, and other Foreign Matter which Gravitates down to the Settling Chamber and is Drawn Off Through Auxiliary Pump Attached to Pump Plate This Pump is Securely Locked when not in use.

Indicator—An Aluminum Etched Dial is Attached to Front of Rack Bar and is Calibrated for Every Pint from One Pint to Five Gallons, Showing at a Glance the Amount Pumped in Pints, if Stopped Between Gallon Buttons

Discharge Register—Automatically Tallies Every 5 Gallons Pumped from 0 to 50 Gallons and is Reversed from Any Point

Hose Draining Valve—The 1¼ in Discharge Pipe Extends 24 in Above Pump and Terminates in a Hose Draining Valve that Automatically Shuts Off the Supply and Allows the Hose to Drain Out Clear.

Hose and Filling Nozzle—Each Outfit Carries Equipped with 8 ft of 1¼ in Steel Lined Hose and Open Type Filling Nozzle with Strainer. Filling Nozzle End of Hose is Locked in Cabinet when not in use. **Automatic Door Stop**—Holds Door Right While Operating Pump

Removable Pump Handle—Handle may be Slipped Off and Carried in the Building, Making Pump Fool and Mother Proof

Quantity Stops—For 1, 2, 3, 4 and 5 Gallons are Located in Front on Pump Standard; to Change Measurement it is but necessary to Push in the Nickeled Disc Stamped with the Quantity Desired.

Finish Pumps and Cabinet are Highly Finished in Vermilion Enamel, with Nickel Trimmings and Gold Lettering

Tanks—Are Built in Any Capacity and Any Gauge of Galvanized Steel; Riveted and Soldered Throughout.

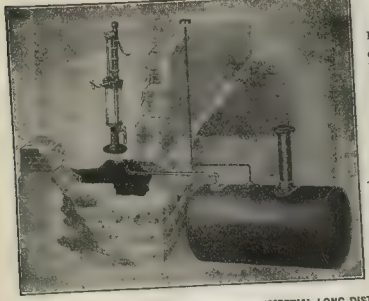
Kelley-How-Thomson Co. of Duluth
GASOLINE STORAGE OUTFITS



Designed Especially for Inside Discharge

The Pump is located inside the Building at Most Suitable Location, while Tank is Buried and Filled Outside.

The Pump is Adjusted to Measure Gallons, Half-Gallons, Quarts or Pints at a Stroke, is Built of Cast and Wrought Iron with Cylinders, Valves, Stuffing Box and Piston Rods of Brass. Cut Steel Gears are Used, and Throughout the Construction of the Best. It is Furnished in Vermilion Enamel with Nickel Trimmings.

The Pump is Equipped with Discharge Register that Automatically Tallies Every Gallon Pumped from **0 to 10 Gallons**; with Safety Automatic Shut-off Cock and Locking Device. Requires but Two and One-half Turns of the Handle to Discharge a Gallon, Giving an Actual Pumping Capacity of Ten Gallons per Minute.

The Tanks are Built of Galvanized Steel, Riveted and Soldered Throughout and Coated with Three Coats Rust-Resisting Paint. Each Tank is Fitted with Heavy Brass Double Foot Valves, Double Fill Pipes with Strainers and Lock Cap.

With Each Outfit we Furnish Locks and Keys, Bolts for Fastening Pump, Measuring Stick for Tank, Two 1½ in. Pipe Unions and Complete Instructions for Installing. No Pipe is Furnished, however.

SOCKET HOLDERS

BILLMONT

JUNIOR WRENCH

A big, husky wrench, 11¼ in. long, of great strength and capacity. Nickel and Parker rust-proof finish.

Similar to Master Wrench, excepting nose is straight instead of curved. Sliding T-bar handle permits tremendous pressure and complete turn on nut with great speed. Nickeled hand grip at center gives firm hold while operator revolves inner tube and nose with T-bar handle, thereby spinning off nut. Socket nose is so constructed to take 24 sizes in Bilmont sockets—giving complete size range with only one wrench. Patent spring lock holds socket in place.

No. 2—Junior. Wt., 1½ lbs...Each, $3.25

SHORT T

Like other Billmont Socket Holders, nose is made to take 24 sizes of Billmont Sockets, giving varied range of jobs without need of more than one wrench. Short T and 24 sockets really makes 24 complete wrenches. The solid bar handle equalizes strain put on wrench, giving unusual strength for this type. Length, 6 in. Nickel and Parker rust-proof finish.

No. 3—Weight, 1 lb. ..... Each, $0.90

No. 3000—Set consists of one No. 3 Holder and 10 Hexagon Sockets, sizes ⅞, ½, ⅝, ¾, ⅞, 1, 1⅛, 1¼, 1⅜ and 1½ in.....Each, $5.45

This set will cover the range of sizes contained in the entire series of ten different short handle T wrenches made by Walden, Blackhawk or Mossberg.

LONG T

Similar in every detail except size (which is 12 in. long) to the short T Socket Holder. The Billmont principle of few wrenches and a universal nose piece makes possible the carrying of a complete range of tools in a small kit—eliminating necessity of many wrenches each of a different size. This line and one set of sockets completes any man's outfit and takes up very little space.

No. 4—Weight, 1¾ lbs.....Each, $0.95

No. 4000—Set consists of one No. 4 Holder and 10 Hexagon Sockets, sizes ⅞, ½, ⅝, ¾, ⅞, 1, 1⅛, 1¼, 1⅜ and 1½ in.....Each, $5.50

This set will cover the range of sizes contained in the entire series of ten different long handle T wrenches as made by Walden, Blackhawk or Mossberg.

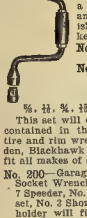
OFFSET

Handle designed with upward bend gives unusual clearance. As in other Billmonts, universal nose takes 24 sizes in Billmont sockets.

No. 5—Weight, 1 lb.....Each, $0.75

No. 5000—Set contains one No. 5 Offset Socket Holder and 10 Hexagon Sockets, sizes ⅞, ½, ⅝, ¾, ⅞, 1, 1⅛, 1¼, 1⅜ and 1½ in..... Each, $5.50

RIM BRACE



Not only adaptable for rim work, but popular with car owners and repair men, because nose piece takes 24 sizes in Billmont sockets, creating a wrench of many uses and great service. Finished in nickel and Parker rust-proof.

No. 6—Weight, 2 lbs. .....Each, $1.50

No. 6000—Set consists of one No. 6 Rim Brace Socket Holder and five Hexagon Sockets, sizes ⅝, 1⅛, ¾, 1¼ and 1⅜ in...Each, $4.00

This set will cover the range of sizes contained in the entire series of five tire and rim wrenches as made by Walden, Blackhawk and Mossberg and will fit all makes of demountable rims.

No. 200—Garage Set. Consists of five Socket Wrench Holders, one each No. 7 Speeder, No. 6 Rim Brace, No. 5 Offset, No. 3 Short T, No. 4 Long T. Each holder will fit every one of the 24 different size sockets.....Per set, $6.40

No. 2000—Set consists of the five holders as contained in the No. 200 set, with the addition of ten hexagon socket sizes ⅞, ½, ⅝, 1⅛, ¾, 1¼, ⅞, 1½ and 1⅜ in.....Each, $9.95

With this set it is possible to cover the complete range of ten long handle T wrenches, ten short handle T wrenches, ten offset wrenches, ten speed wrenches and five rim wrenches as made by Walden, Blackhawk or Mossberg and at a cost of about one-third.

SPEEDER

An unusually popular speeder because nose piece takes all Billmont sizes (24 in all) of sockets. This speeder and one set of Billmont sockets gives a complete speeder outfit with only one wrench to carry.

No. 7 Hardened steel, Parkerized and capable of a wide range of jobs. Weight, 2 lbs. .....Each, $1.30

No. 7000—Set consists of one No. 7 Speed Socket Holder and 10 Hexagon Sockets, sizes ⅞, ½, ⅝, ¾, ⅞, 1, 1⅛, 1¼, 1⅜ and 1½ in. .....Per set, $5.85

This set will cover the range of sizes contained in the entire series of 10 different brace speed wrenches as made by Walden, Blackhawk or Mossberg.

No. 2300—Set consists of the five holders as contained in the No. 200 set and the No. 300 set of 24 sockets. With this set it is possible to reach 120 different size nuts and bolts. This is an especially useful set for the garage or machine shop...Each, $17.90

BILLMONT DISPLAY BOARD

Merchandise well displayed is half sold. Give the car owner a chance to sell himself while you may be busy otherwise. This Display Board, lithographed in three colors on sheet steel and backed and mounted on very finely finished hardwood, will increase wrench sales. Easel backed with hanger, size 2x5 feet. Given with the following assortment:

3 Master Wrench Sets.
3 Junior Wrench Sets.
10 Short T Socket Holders.
10 Long T Socket Holders.
10 Offset Socket Holders.
10 Speeder Socket Holders.
10 Rim Brace Socket Holders.
1 Display Board—free.

No. 150—Display Board Outfit....$95.25

SEATTLE HARDWARE COMPANY

BLUE FLAME WICKLESS OIL STOVE
Without Legs
Made with One, Two or Three Burners

This Blue Flame Wickless Oil Stove is made of the best of materials by the same workmen in the same factory as our highprice Oil Stoves. It is especially suitable when placed upon a table or bench. The frame is entirely enclosed on sides, top and back and is very rigidly and strongly put together. **Burners** are the same as used in our highest grade stoves. Made in three sizes. Securely crated and shipped direct to you from Ohio factory

	Burners on Top	Size of Top	Height	Weight	Price
S-6043	1	14x14	10 in	17	**$5.50**
S-6044	2	22x14	10 in.	25	**7.15**
S-6045	3	31x14	10 in	30	**9.95**

For prices on Ovens see illustration and prices below.

BLUE FLAME WICKLESS OIL STOVE
With Legs
Made with Two,, Three or Four Burners

This is a very popular style of Blue Flame Wickless Oil stove, it is preferred by many on account of it having legs so that it can be used without being put on a table or box. Made of the very best of materials throughout. **The burners and burner equipment** on these stoves are gigantic in size and are made in such a way that they produce an extremely large flame with a very small consumption of fuel. More baking and cooking can be done and done quickly on this stove, with a smaller amount of kerosene or coal oil than can be done on any other Blue Flame Range ever invented. The surpassing excellence of the construction will exceed your fondest imagination. Made with two, three and four burners. Note prices. All stoves are securely crated and shipped direct to you from Ohio factory.

	Burners on Top	Size of Top	Height	Weight	Price

S-6052 Large oven, size 20x18x13 inches with glass door..... **5.95**

NEW PROCESS OIL STOVES

MADE IN TWO SIZES

S-6038 Oil Stove
Height 27½ inches.
Width 12 inches.
Depth 12 inches.
Capacity of Fount, 1 gallon
Shipping Weight, 14 lbs.

Our New Process Oil Stoves are of the very latest designs and are so constructed that they give more heat on less fuel than any other oil stove on the market.

The plain straight lines of these two New Process heaters are extremely pleasing. Their dull, ebony black surfaces are well set off by the nickel trimmings.

A patented, exclusive feature of this model is its "furnace" construction. A central flue, running from the burner to the top of the stove furnishes draft for a plentiful supply of air, insuring complete combustion and greatest economy of fuel.

Surrounding this flue is the hot air chamber. This takes cold air from the floor and warms it, throwing it out at the top. It assures a positive circulation of warm fresh air at all times.

Strike a match and instantly you have a full flame of great intensity and power. This is due to the construction and design of the flame spreader which keeps the wick even and permits adjustment to just the proper height.

The simple design of this burner enables the stove to be cared for with a minimum of attention. It is wonderfully efficient and furnishes abundant heat at the lowest cost. The flame is intensely hot and smoke-

Rewicking—necessary only once in a normal season—is made very easy indeed with this New Process wick. Enclosed in a metal sleeve, it can be inserted in thirty seconds.

The generous oil fount holds a gallon of kerosene, fuel for eight hours' continuous burning. The well in the bottom of the tank supplies oil to the wick as long as there is any in the fount. An indicator shows the amount of oil present.

Our New Process Oil Stoves are packed in moisture proof cartons and shipped direct to you from Chicago factory.

Williams No. 2-S.

SEATTLE HARDWARE COMPANY

BONNEY DROP FO... RTMENT

This Assortment contains six each of thirty different Bonney Spe... ished Drop Forged Wrenches.

The purpose of this assortment is to furnish the dealer with a complete range of sizes of Drop Forged Wrenches for use on U. S. Standard and S. A. E. nuts and cap screws. It includes a complete range of openings in the 15 degree angle straight bar wrench from ½ in. to 1 in., also six different sizes of 22½ degree angle straight bar wrenches which have openings to cover the most generally used nuts and cap screws in the various standards from ½ in. to ⅞ in., inclusive. The openings running from ⅝ in. to 1¼ in.

In addition, three different size thin wrenches are included for S. A. E. valve tappets.

One other wrench is included which is of a special design for use on the brake and reverse gear on the Ford car. This wrench has a peculiar application and there is a steady and large demand for this special type.

All of the wrenches contained in this assortment are Drop Forged, special finish, hardened and heads polished. Each wrench is thoroughly warranted

The Display Board is made of soft wood, covered with heavy gauge metal, highly lithographed in colors. The metal covering is securely held by a moulding 1½ in high, and the lithographing is permanent and will not crack or peel. It may easily be cleaned with a damp cloth.

The size of the Board is 45 in. high, 16 in. wide and 1½ in. thick. Hooks are inserted at an angle of 75 degrees from the face of the board so that the weight of the wrenches at all times forces them against the board and holds them firmly. Springs of special design are also furnished which may be attached between the hooks, further eliminating the possibility of falling off and pilfering.

Each Board is packed in an INDIVIDUAL SHIPPING CONTAINER. The wrenches are packed in cardboard cartons, and each assortment in an individual container. A complete unit of one board and one wrench assortment weighs approximately 100 pounds. The wrench assortments may be ordered separately as refills, or individual sizes of wrenches may be purchased in any quantity.

Fits on the lower section of the wind shield and prevents the rain from driving between the glasses during a storm. Cut in strips suitable for one windshield.

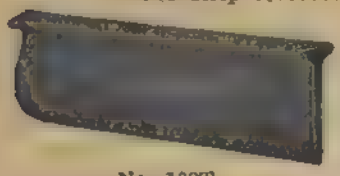
For Regular Windshields

No. 97
Length, inch 42
Per strip $0.60

For Offset Windshields

No. 109
Length, inch 37
Per strip $0 60

No. 109



No. 108T

T-Shaped Rubber

No. .....108 T
Length, inch 42
Per strip $0.40

FIRE EXTINGUISHERS

BOYCE

A combined sprinkler system and hand operated fire extinguisher made in the unique form of a graceful crystal container, filled with the most effective fire extinguishing fluid known to chemistry.

Installed under the hood (where 90% of auto fires start) the extinguisher automatically gets into operation the moment the fire breaks out. An overheated motor will not start it, but the natural heat of the engine combined with the heat of the fire melts the seal and converts the liquid contents into a quenching gas that quickly and completely smothers the blaze. If fire should break out in any other part of the car, the extinguisher can quickly be released and operated by hand by simply removing the top.

No pumping is ever necessary. The container is heavy glass with nickel plated trimmings, and hangs on a handsome metal bracket. The seal on the nozzle melts at 180°. Contents always visible and will not leak, evaporate, deteriorate or freeze. It is a non-conductor of electricity and harmless both to operator and material on which it is sprayed. When used the container can be returned to filling station in San Francisco, and recharged for a nominal sum. Cost of transportation both ways to be borne by customer.

Model 1, pint size with bracket.....Each $6 50
Model 2, quart size..... " 8 50
Model 1, without bracket..... " 6 00
Model 2, without bracket..... " 7 50
Bracket only for No. 1..... " 1 10
Bracket only for No. 2..... " 1.60

Refills

Model 1 .....Each $1 50
Model 2 ..... " 3.00

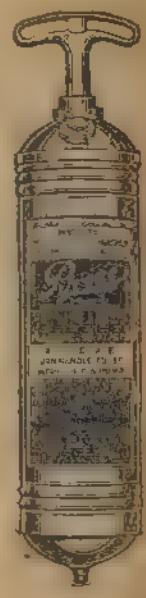
FIRE EXTINGUISHERS

GUARDENE

Guardene Fire Extinguishers embody all the latest improvements in soda and acid machine. It is made of cold-rolled copper, burnished outside and heavily plated inside with tin to prevent corrosion. They are tested to 350 lbs pressure, but the working pressure is only about 100 lbs. It will throw a stream 40 feet, which can be shut off by turning the extinguisher right side up again.

Capacity, gallons 2½
Guardene, weight filled, lbs..... 40
Each $20.00
Recharges ....Per dozen 9.00

PYRENE



Especially constructed for automobiles but can be used in garages, hotels, factories and homes. Safe and certain on electrical fires without injury to the operator. The liquid is a chemical preparation of purely organic materials and having an aromatic odor and a high specific gravity. As it touches the fire a dense white gas is formed, which surrounds the fire and smothers it. Very effective on highly inflammable material such as oils, grease, gasoline, etc. Operated by turning handle and pumping which forces the fluid out of the cylinder. Made of brass and white metal, capacity one quart. Complete with black finish brackets.

Pyrene, Brass—Weight, 6½ lbs.....Each $10 00
Pyrene, Nickel Plated—Wght, 6½ lbs " 11.00

Each extinguisher in cardboard tube ready for use and with complete instructions.

PYRENE LIQUID

For refilling Pyrene Extinguishers.

Pyrene Liquid—Qt can. Wgt, 4 lbs..Per can $1.75

Packed in quart cans, 20 quarts to the case. Gallon cans, 6 cans to the case.

BRACKETS

Black enamel brackets for extinguishers..... Each $1 00

FIREKLOK

AUTOMATIC FIRE ALARM SIGNAL

Should be installed in all buildings where there is danger of fire, close to the fire risks or hazards, by suspending them about a foot from the ceiling and about every 40 or 50 square feet. The Fireklok is guaranteed for 5 years and is rust proof. Operates similar to the automatic sprinkler system, but fuses at 140° instead of the minimum of 155° required heat in the automatic sprinkler head. When the fire starts the head fuses and releases the gong, which rings continuously for four minutes and can be heard a long distance.

Fireklok .....Each $7.50
Extra Fuse Heads..... " .50

SPEEDOMETERS
STEWART-WARNER
FOR FORD CARS

All speedometers complete with fittings and driving equipment.

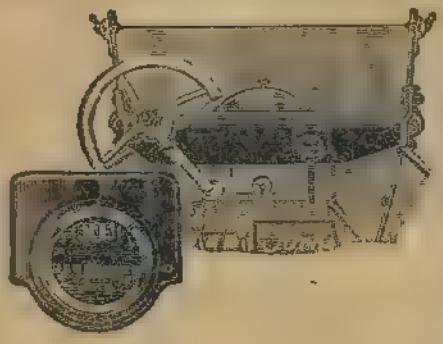
Built on the magnetic principle, the only one on which an absolutely accurate speedometer can be built. Has rotating speed dial 60 miles capacity. Odometer has 10,000-mile season register and 100-mile trip register. Trip register can be rapidly reset to any tenth of a mile. Jeweled bearings, polished steel magnets, 3-inch jet dial face. Finished in jet black with brass trimmings. Weight, 11 lbs.

1921 MODEL

For Ford cars in which instrument board has already been installed.

No. .....160 A
Each $16.50

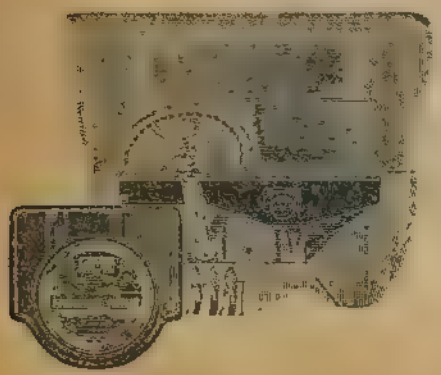
1921 MODEL



Special instrument board for Ford touring cars and roadsters, with No. 160A speedometer attached.

No. .....160 B
Each $17.25

1921 MODEL



Special instrument board for Ford coupes and sedans, with No. 160A speedometer attached.

No. .....160 C
Each $17.25

SPEEDOMETER PARTS
F. W. S.
SWIVEL JOINTS

All wearing parts steel. Steel bushings where moving parts come into contact with the soft metal case.

The most efficient, most durable and in every way the best swivel joint ever made. Weight, 1½ lbs.

No. A209R—2½ to 1—1911 to 1918, right hand.
Each $3.75

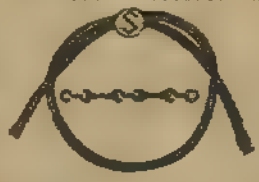
No. A209L—2½ to 1—1911 to 1918, left hand.
Each $3.75

SPEEDOMETER SHAFTS

These shafts are furnished complete with end fittings to fit Stewart, Standard and Sears Cross speedometers and are interchangeable in every respect.

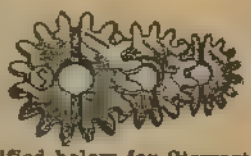
The flexible tube or housing is made of the best rolled steel with positively locked joints, making the strongest and at the same time the most flexible shaft on the market.

No. B210—Complete shafts, 50, 54, 60, 66, 72, 78 and 84-inch. Specify length desired.
Each $4.50



No. B211—Outside housings, both end ferrules, 50, 54, 60, 66, 72, 78 and 84-inch. Specify lengths.
.....$2.50

FIBRE GEARS



These gears are made of the best quality sheet fibre, cut out of complete sheets and turned to size before the teeth are formed.

We use absolutely no scrap or waste fibre, all gears being cut from fresh, perfect stock.

Made in cotter pin and nut type as specified below for Stewart speedometers.

Nos.		
D249	No. 1 Cotter pin fibre gears	Each $0.35

C217	Lower sliding bar clutch	" .35
C216	Links. 11 links to the foot	Per foot .50

FIRE EXTINGUISHERS

PYRENE

Regular Bracket.

Glass Front Bracket. Metal Frame.

Pyrene is the enemy of fire of every kind. Blazing gasoline is as easily extinguished with Pyrene as burning shavings. If carried on your automobile it means 15 per cent reduction in the insurance premium.

Pyrene will not freeze at 50 below zero. Hence it is particularly adapted to use in cold climates, or in buildings exposed to extremes of temperature.

Pyrene never deteriorates with age. Hence there is no expense for up-keep. It is a non-conductor, hence it can be used with absolute safety on electrical fires.

Pyrene contains no water. It will not injure the purest fabric or stain the most delicate colors. Inspected, approved and labeled by the Underwriters Laboratories Inc. Passed by the U. S. Steamboat Inspection Service. It is a clear fluid of aromatic odor. When exposed to 200 degrees of heat it turns into a heavy gas that settles on the flames and extinguishes them by shutting off the air.

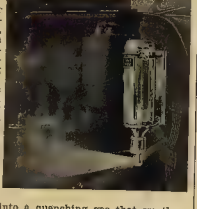
BOYCE



A combined sprinkler system and hand-operating fire extinguisher, made in the unique form of a graceful crystal container filled with an effective fire extinguishing fluid.

The Boyce Automatic works automatically, and may also be operated by hand. No pumping is ever necessary.

Installed under the hood of an automobile, the Boyce Automatic gets into operation the instant a fire breaks out. The heat of the fire combined with the heat of the engine converts the liquid into a quenching gas that smothers the blaze completely.

An overheated motor cannot affect it. Only the increase in temperature caused by an actual blaze can put it into operation. If fire should break out in any other part of the car, the Boyce Automatic can be quickly released from its bracket and operated by hand. The Boyce Automatic is equally effective in home, garage or general use. Refilled for a very nominal charge.

No. 1—Pint size	Each,	$6.50
No. 2—Quart size	"	8.50

GUARDENE

Approved and labeled by the Underwriters' Laboratories, Inc.

Guardene Fire Extinguishers embody all the latest improvements in soda and acid machines. They are powerful enough to handle a free burning fire in its early stages, yet light and compact enough to permit extremely quick action. All fires are small fires first and there are few fires that a Guardene won't handle if it is used during the first few minutes.

Guardene Extinguishers are well designed and do not look out of place in any office, school or theater. Besides bearing the Underwriters' label, Guardene Extinguishers are approved by the U. S. Steamboat Inspection Service and by the factory mutual insurance companies.

It is made of cold-rolled copper, burnished outside and heavily plated inside with non-corrosive metal. In the head is a "cage" which holds a bottle half filled with sulphuric acid. The tank is filled with a solution of bicarbonate of soda.

To use the extinguisher it is simply turned upside down, the stopper falls out and the mixing of the acid with the soda solution generates a gas pressure that will throw a stream 40 feet. The stream can be shut off by turning the extinguisher right side up again.

Guardene Fire Extinguishers are tested to 350 pounds pressure, but the working pressure is only about 100 pounds.

As the cost of recharging these extinguishers is slight, the upkeep expense is low. Guardene soda and acid recharges are scientifically compounded and absolutely accurate. They are standard recharges for Guardene Extinguishers or any standard soda and acid extinguisher.

BOYCE MOTO-METERS

The Boyce Moto-Meter is a heat indicator, mounted on the radiator cap of your car so that the radiator temperature is at all times visible while you drive. It absolutely insures the vital part of your car, the motor, against damage, and by its use you can tell instantly when the radiator needs water, when the lubricating system needs more oil, when the fan belt breaks or slips, when there is dangerous heat congestion anywhere throughout the motor.

STANDARD MODEL

Designed for those who want the best. A perfect heat recording instrument, with extremely broad ribbon bore thermometer tube.

Weight each, lbs..... 1
Each $10.00

DE LUXE

Identical in every respect with the Standard, except that is heavily silver plated and highly finished.

Regular equipment includes a Schlaich lock.

Weight each, lb 1
Each $15.00

UNIVERSAL MODEL

Is what the name implies. Not only an ornament to any car, but thoroughly reliable, and extremely accurate.

Weight each, lbs ..... ¾
Each $7.50

JUNIOR MODEL

Handsome in appearance, very accurate, and appeals to owners of medium size cars.

Weight each, lbs ..... ½
Each $5.00

TRACTOR MODEL

Specially designed for rough usage and to withstand the hardest vibrations and strains to which it might be subjected in truck and tractor use.

Weight ea. 1½ lbs..Each $10.00

MIDGET MODEL

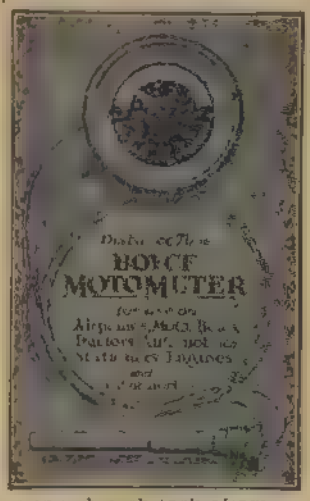
Meets the demands of small or light cars. Guaranteed accurate and sturdy.

Weight each, lbs. ..... ¼
Each $2 50

SPECIAL FOR FORDS

Without question this is the best purchase any Ford owner can make. It will make the car look better, run better and last longer. Packed one in a carton. Weight, 7 ounces.

In .....Each $3 50

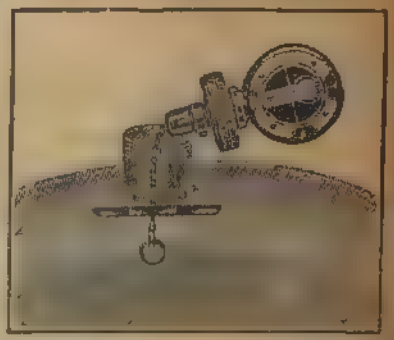


DISTANCE MODEL

The newest type, specially recommended for marine work and a good all-around instrument for tractors, stationary engines and high class cars. Registers full scale of 30° to 212°. No gears. Direct movement of the pointer. Smooth, unbroken non-vibrating movement of the hand. Weight each, with 12 feet of tubing, 12 ozs.

Each $18 00

MOTO-METER LOCKS



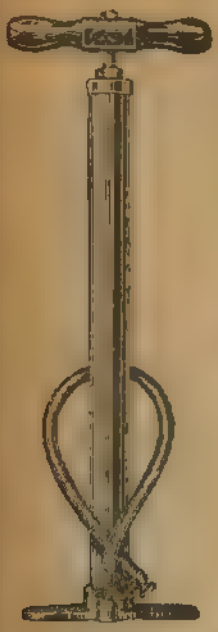
The Schlaich lock allows you to unscrew the cap and fill the radiator as you always did. But it doesn't allow a thief to walk off with your Boyce Moto-Meter. Nor does it permit you to lay down the instrument where it can drop on the ground and be broken. It can't be removed from the car.

You can attach the Schlaich lock yourself. No drilling or mechanical work of any nature. Yet when it's on it can't come off—except when the set screw is removed, which can be done only by the owner. Adjustable to any depth radiator neck by placing ring in holes of chain.

The strongest thief with the strongest pliers cannot cut the nickel plated brass chain that connects the channel bar to the Boyce Moto-Meter stem. Made in four sizes, as follows:

Nos.	Size, in	Models	Each
1	¾	DeLuxe and Truck and Tractor	$2 00
2	⅝	Standard and Universal	1 80
3	½	Junior and Ford	1 80
4	Special	Overland Types	1.50

TIRE PUMPS



CROWN

A high class single action pump with seamless brass cylinder. Heavy cast base.

A double cylinder, seamless steel pump. Cast iron screw in base. Height over all, 20 inches. Similar in construction to Aeolus.

No. 100
Length of cylinder, inch..... 16
Weight, lbs 4
Each $2.50

ROSE

A single action steel cylinder pump, fitted with a patent valve which eliminates friction and produces as much air with one cylinder as most pumps do with three cylinders. Made of 18 gauge steel tubing with heavy brass top and base. Solid steel plunger.

Cylinder, inch	1¼	1½
Height over all, inch..	22	23
Length of cylinder, in.	20	20
Weight each, lbs	3½	4
Each $3 00		$.50

One in a carton.

SKINNER COMPOUND

A compound pump which discharges on down stroke only and which pumps against 90 lbs pressure as easily as against 10 lbs. Construction embodies three cylinders, 1½-inch, ⅞-inch and ⅝-inch. 18 inches long telescoped. Made of 20 gauge steel, nickel plated and polished. Heavy cast iron base, black enameled. Detachable hardwood handle.

Length over all, inch..... 24
Weight, lbs 3
Skinner .....Each $5 00

One in a box

HART-BELL

The most important feature of any pump is the leather bucket. It makes the pump pump. It must at all times fit the barrel snugly. In the base of a Hart-Bell pump is a conical-shaped tool and the base of the cylinder flares (see illustration), so that at every stroke the leather bucket automatically slips over the forming tool and is spread out larger than the circumference of the barrel, thus insuring a tight fit. When the pump is idle the leather bucket fits over the forming tool, which keeps the leather in shape and preserves it in perfect condition for the emergency call. The cylinder is made of 1½-in diameter steel tubing which screws into a heavy malleable iron base. The plunger rod is of heavy cold rolled steel with hardwood handle. Finished both inside and out by the Parker patented process, the process used by the United States Government, thus insuring protection against rust. Average weight, 4¼ lbs.

Hart-Bell No. 1—20-inch cylinder .....Each $4.50
Hart-Bell No. 2—17-inch cylinder ..... " 4.50

Thirty-six in a box.

WATERBURY

A high grade three-cylinder brass pump. Forces air into tire at both up and down stroke. Heavy cast base.

Height over all, inch..... 21½
Length of cylinder, inch..... 18
Weight, lbs 9¼
Waterbury .....Each $7 00

One in a carton

BOYCE MOTOR METER

MIDGET MODEL

A model especially designed to exactly suit the needs of the small or light car. It possesses the same accuracy of the larger models with the same high quality of workmanship and finish. Built to fit the regular radiator cap of all Chevrolet "490", Maxwells and other small cars.

Midget .....Each, $2.50

SPECIAL FORD MODEL

Complete with Handsome Nickel Radiator Cap.

Without question the Boyce Moto-Meter is one of the greatest money and trouble savers any Ford owner can put on his car. It will make any Ford look better—run better and last longer.

Ford Special .....Each, $3.50

JUNIOR MODEL

This model is extremely handsome in appearance and appeals strongly to owners of medium size cars. The frame is heavily nickel-plated and it has the same accurate range of temperature and perfect workmanship as the "Standard" and "Universal" Models.

Junior .....Each, $5.00

UNIVERSAL MODEL

Slighly smaller in size than our "Standard" Model, but in workmanship and accuracy they are the same. Finished in all nickel with bevelled plate glass crystals both front and rear. Very striking in appearance, giving a touch of "class" to any car.

Universal .....Each, $7.50

STANDARD MODEL

A perfect heat-recording instrument of the highest type—designed for those who want the best. The thermometer tube gives a broad ribbon effect, due to the magnification feature incorporated in the tube. Finished in black enamel and nickel with heavy plate glass bevelled crystals, front and rear, sat dustproof and waterproof. Because of its perfection of workmanship, the Standard Model has been selected as regular equipment on America's leading cars.

Standard .....Each, $10.00
Truck and Tractor. . ..... " 10.00

DE LUXE MODEL

This handsome instrument was designed for the highest grade passenger cars. The temperature tube is ⅛ inch in diameter, having a broad column of red liquid, readable at a great distance.

The case is silver plated and the finish of the entire instrument is of the very highest quality of workmanship.

De Luxe—Size, 3⅝x5⅝ in. Weight (packed in substantial carton), 20 oz. .....Each, $15.00

BUELL EXPLOSION WHISTLES

SINGLE TONE

CHIME

A new type warning signal, operated by the explosion in the engine cylinder. Easily installed by merely removing one priming cup and screwing the whistle in its place. Gives a distinctive and very powerful note, which can be readily varied according to traffic conditions.

Construction is so simple it cannot get out of order. Very efficient as a warning. Does not impair efficiency of cylinder, as it takes only a small portion of the gas during one or two explosions. Should not be confused with exhaust whistles, from which it differs radically.

Permanent satisfactory operation is guaranteed. Can be used on the Ford and cars without priming cup openings, by the use of a special spark plug which is designed to carry the valve. Shipping weight, 1¼ lbs.

Single Tone, complete with valve	Each	$5.00
Single Tone, with ½ or ⅝-inch spark plugs	"	6.50
Chime, complete with valve	"	7.00
Chime, with ½ or ⅝-inch special spark plug	"	8.50

SAFETY WARNING SIGNAL

Solidly built, nickel plated finish. The tone is clear and musical, distinct from all other traffic sounds. Simply and easily attached, in place of priming cup in No. 2 cylinder. Control cord runs from the signal direct to steering column, within instant reach of the driver. The action of the valve is positive, and will close instantly when released by driver. Guaranteed fool proof. Special attachment for spark plug can be furnished for use in cars with overhead valves, not equipped with priming cup. Weight, ¾ lb.

No. 25—Complete ready to attach in place of priming cup.

Each $2.50

No. 25½—Spark plug attachment only for ½-inch ..... Each $0 50

No. 25⅝—Spark plug attachment only for ⅝-inch ..... Each $0.50

AERMORE EXHAUST HORN

The clear, melodious notes of the Aermore Exhaust Horn are a pleasant sensation to the ear, an effective, unmistakable warning, yet sweet, soothing and agreeable.

A pressure of the convenient foot pedal operates the horn, sounds a tuneful chord like a pipe organ. It does not paralyze the hearer, does not startle and dumfound the pedestrian, simply warns in a pleasantly definite and certain manner of your approach. It can be heard a long distance, and secures immediate attention.

Can be attached to the exhaust pipe of any car between the engine and the muffler by means of a valve operated by the foot pedal. Constructed of brass and steel nickel plated, does not become clogged, no moving parts to get out of order. Each horn equipped with pedal, cable, pulley and elbow, but without valve. See below for valves. Average weight, 4 lbs.

No. 1—15-inch for heavy and high power cars, complete except valve.

Each $9.70

No. 2—13-inch for 25 to 30 H. P. cars, complete except valve.

Each $8.70

No. 3—11-inch for 20 to 25 H. P cars and Fords, complete except valve. (State which).

Each $7 70

VALVES

FOR AERMORE HORNS

Style G—For attachment between engine and muffler, by cutting a section of exhaust pipe and inserting valve. Recommended as best position to install, where possible. Size, 1½ to 2½ inches. Average weight, 2¼ lbs.

Each $2.20

Style G

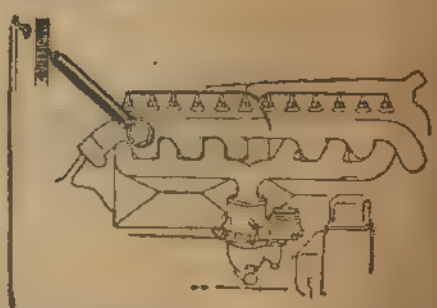
Ford Special

Ford Special—For attachment behind muffler on Ford cars where tail pipe is flattened. Weight, 2 lbs.

Each $2 20

AUTO SIREN

STILES LIBERTY



Plays sixteen melodious musical notes. Attached to the exhaust manifold under the hood of any pleasure car, truck or motor boat. Operates by the simple pull of a cord attached to the dash or steering wheel column. Costs nothing to operate. Does not in any way interfere with the mechanical operation of the car.

Weight, lbs 18
Each $3.50

HEADLIGHT LENSES
MACBETH

SCIENTIFICALLY BUILT

An automobile headlight lens built on the same fundamental principles of light control as the celebrated Macbeth lighthouse lenses.

The front surface of the Macbeth Lens is divided into five horizontal prisms, each of which is inclined to an angle that was determined with scientific accuracy. As a result the light is directed down below the horizontal, lighting the path of the car at the greatest distance possible without having the glare of the lamps blind the driver in an approaching automobile. The concave recesses in the back of the lens spread the light laterally, thus providing the very essential side lighting necessary for country driving and for turning corners.

The driver is enabled to get a clear vision of the road 300 feet ahead. At the same time a driver in an approaching automobile is not blinded by the glare, due to the fact that the light is on the road and not in the air.

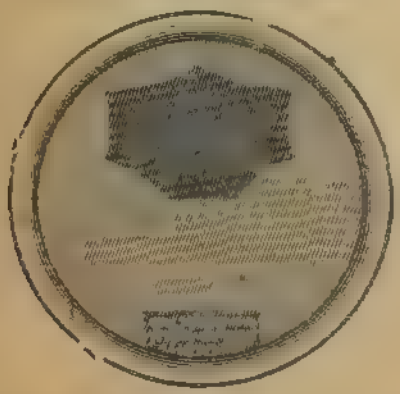
Macbeth lenses are made in all sizes to fit standard lamps.

We carry in stock sizes 7 to 10½ inches in diameter.

Macbeth—Any size.....**Per pair $5.75**

Always specify diameter of lamp and lens

CALIFORNIA HIGH SPEED



Heads the list of approved headlight devices of the Motor Vehicle Department of California, and is given the highest endorsement given any lens so far tested. (See their booklet, Traffic Rules No. 47256, revised July 31, 1919, obtainable by request State Printing Office, Sacramento). It is the most desirable lens made, as any candle power lamp, from 10 to 32, can be used without modifications or tilt of any kind. Any one can make the change in ten minutes. Take out the old and put in the new without changing lamps or tilting headlight. The lens gives the most remarkable and desirable light that can be produced, not a dancing, bobbing beam, but a full daylight ray, far in the distance and at both sides, making a perfect driving light.

While many lenses were tested, and practically all were approved, many were burdened with complicated adjustment, necessitating changes of lamps and tilting of headlights, but the California High Speed Lens combines all the good points, and eliminates all the undesirable modifications, making it 100% perfect.

High Speed—Any size.....**Per pair $8.00**

One pair in a carton. Weight per pair, 2 lbs.

PIPE AND CIGAR LIGHTERS

No. 199PL

No. 202

No. 199PL—Pipe lighter. Nickel plated holder, which can be attached ot any part of the car. Ten feet of cord and Ediswan plug that fits any socket. Mounted six on counter display card.

Per dozen **$24.00**

No. 202—Cigar lighter. Nickel plated holder. Complete with regular terminals and ten feet of cord. Mounted six on counter display card.

Per dozen **$30.00**

No. 199PCL—Pipe and cigar lighter complete with chromium nickel tip and holder, either single or double contact plug.

Per dozen **$24.00**

Average weight per card, 2 lbs.

TROUBLE LAMPS

Made especially for use on autos and motor boats. It has a heavy beveled plate glass lens, with a 3½-inch parabolic reflector, and will throw a powerful beam of light over 100 feet. It is ruggedly built for real rough service, with highly polished hardwood, heavily nickeled metal parts, and has 10 feet of flexible waterproof cord with suitable attaching plug on the end. Furnished with a 6-volt lamp unless otherwise specified.

No. 3751—Fitted with G6, 4 C. P., single contact, Ediswan Base Lamp and Attachment Plug. Weight, each, 1 lb.

Each **$3.75**

No. 3752—Fitted with G6, 4 C. P., double contact, Ediswan Base Lamp and Attachment Plug. Weight each, 1 lb.

Each **$3.75**

BUFFALO SCALES
MOTOR TRUCK
TYPE A RIGID BEARING

In keeping with the usual high quality of all Buffalo scales this type is designed and built according to the construction used in railroad track scales. It is particularly adapted for weighing heavy vehicles and motor trucks where the load is concentrated on the rear axle. Complete with compound beam, short arm pillars and shelf steel for commercial construction. Customer to furnish lumber and concrete for foundation.

No.	2245
Capacity, tons	20
Platform, feet	20x9
Edge of platform to beam rod	4' 6"
Weight complete, lbs.	45,526
Each	$775 00
Fabricated structural steel and anchor bolts	$400.00

WAGON AND STOCK WITH DOUBLE BEAM

Shallow Pit, Solid Lever Pattern

Buffalo Shallow Pit Wagon Scales are heavy enough not to require truss rods. Such scales, while slightly more expensive than the trussed lever pattern, are very desirable for damp pits where truss rods may rust enough to impair the accuracy of the scale. Heavy polished brass double beam and sliding poises. 2000-pound upper beam, with 5-pound marks; 1000-pound lower beam, with 2½-pound marks. Graduated counterpoise.

No.	2208
Capacity, tons	6
Platform, feet	15x8
Edge of platform to beam rod, inch	25½
Shipping weight, lbs.	1000
Each	$630.00

Each scale packed in two cases.

WAGON AND STOCK WITH COMPOUND BEAM
Beams Furnished on Scales Nos. 2222 to 2234

The compound beam wagon and stock scales are the same construction as the double beam wagon and stock scales.

Trussed Lever Pattern

Polished brass compound beam and poises. No. 2228 has a 14,500-pound main beam, with 500-pound marks; 500-pound unit beam, with 5-pound marks; 5000-pound tare beam, with 10-pound marks. No. 2234 has a 21,500-pound main beam, with 500-pound marks, 500 pound unit beam, with 5-pound marks; 8000-pound tare beam with 20 pound marks.

	2228	2234
Nos.		
Capacity, tons	10	15
Platform, feet	22x8	22x9' 8½"
Edge of platform to beam rod, inch	26	32
Shipping weight, lbs.	1475	2100
Each	$442.50	$525.00

The prices quoted on the above scales do not include lumber or foundation, which are to be furnished by the purchaser.

Each scale packed in three cases.

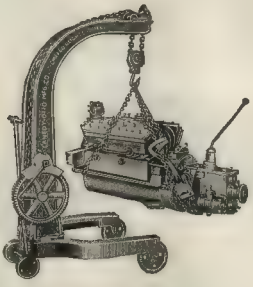
For straightening forgings, parts of automobiles and machines which have been sprung by rough usage its advantages are unlimited. Length of table, 13 in.; size of screw, 1 in. diameter No. 4 Acme thread. Extreme distance from screw to table, 17½ in.; capacity, 2 in. stock. Length of lever, 20 in. Net weight, 47 lb.

Each

Straightening Press $35 00



PORTABLE CRANE AND HOIST

With this Portable Floor Crane, Auto Repair Shops and Machine Shops can do away with the expense of the Overhead Traveling Crane or Chain Blocks.

The Portable Floor Cranes are suitable for all kinds of heavy lifting, cutting the time lost in handling materials, that counts against production, and in many cases paying for itself very quickly in hundreds of Machine Shops. No Shop can afford to be without a Portable Crane. They combine strength and capacity, are everlasting, easy to pull and can do their work far quicker than could a half-dozen hands, and are always on the job.

MOTOR STANDS

For Ford Motors

The handiest device of its kind for use in shops and garages doing Ford engine work. The Ford motor when taken from a car can be fastened to the stand by the two cap screws which screw into the side of the motor where water inlet connection is fastened. The stand is so constructed that the part screwed to the motor will revolve in the clamp on the stand and can be locked by tightening the lock-screw, which will hold the motor in any position or angle desired to suit workman. It also has a tool tray where the workman can place his wrenches or parts of the motor if so desired. It is mounted on wheels so it can be moved from place to place. It is 34 in. high; 32x30 in. floor space. Axle attachment can be used on this stand.

	Each
Ekern's Motor Stand, with Axle Attachment	$36.00
Shipping Weight, 89 Lbs.	
Ekern's Motor Stand Only	20.00

SHOP BENCH MOTOR SUPPORT

A handy device to hold your Ford motors in position on your shop bench, while working on them.

The support can be bolted very easily and quickly to any workshop bench and is amply strong to hold a whole Ford Motor assembly. By using an Ekern Axle Attachment to the support, it is also possible to hold any kind of an axle assembly in any position desired.

The motor block is attached to the support by the two cap screws on the side of the motor where the inlet connection is made. The part which fastens to the motor block is the same as used on our motor stand and also our Portable Engine Work Bench.

The casting which fastens to the motor block is made to revolve in the clamp casting which is bolted to the bench and by tightening the clamp screw, the motor or axle can be held at any angle desired.

	Each
Ekern's Shop Bench Motor Support	$10 00
Weight about 22 Lbs.	

PORTABLE WORK BENCH AND ENGINE STANDS

This outfit embodies both the features of our Ekern Motor Stand and a Work Bench and is especially designed for use in Ford Repair Shops.

It is provided with two large trays 22x24 for convenience, where the workman can place his tools, motor and axle parts. The Stand is mounted on three 4-in. diameter wheels. The rear caster wheel is so constructed that by pulling the plunger jim, the caster will swing up off the floor and the stand will then rest firmly on its legs. By kicking the caster lever down the stand will go back on its wheels and lock automatically.

A Ford assembly can be fastened to the Stand by the two cap screws which hold the water inlet connection on the side of the motor block. The part fastened to the motor will revolve in the clamp on the stand and can be locked in any position or angle, by tightening the clamp screw.

The work bench is also equipped with a machinist's vise, which has a 3-in. jaw with a 4-in. opening, which will handle any work required in overhauling a Ford motor or axle, also other kinds of work.

The Work Bench and Engine Stand is 36 in. high, 27x42 in floor space.

	Each
The Axle Attachment can be used with this Outfit.	
Portable Work Bench and Engine Stand, with **Axle Attachment**	$45 00
Shipping Weight, 129 Lbs.	
Portable Work Bench and Engine Stand Only	40.00

AXLE ATTACHMENTS

For Ekern's Motor Stand and Ekern's Portable Work Bench

This attachment is for use on either the Ekern Portable Work Bench and Engine Stand or Ekern's Motor Stand.

By merely bolting these attachments to the revolving parts of the stands, it quickly converts them into axle repairing stands for repairing nearly all makes of automobile axles, but it is especially designed for Fords.

The stands and also the axle attachment are so designed that the axle assembly can be set in any position or angle to suit the convenience of the workman.

Overhauling of an axle with this device and stand can be accomplished in about one-half the time it requires to do the work on bench or on the floor.

	Each
Ekern's Axle Attachment	$6.00
Weight about 9 Lbs.

An Extraordinary Crankshaft—
That of the New Marmon

IT is made of the same special alloy steel as the Liberty Motor crankshaft. Hence it has great inherent strength.

It is unusually large in size, the main bearings being 2¾ inches in diameter. A big factor for rigidity.

It is balanced in standing and running tests.

Extremely accurate is the fitting into the crank case. The bottom surface of the crank case is *lapped*. No variation in the surface. Hence all holes for placement of bearings can be bored absolutely true.

The accuracy of the fitting, the rigidity and balance of the crankshaft give a new freedom from vibration and a new meaning to smooth operation.

Pennant Awarded to Nordyke & Marmon Co., Nov 1, 1918, by U. S. Government, Bureau of Aircraft Production, for Oct. Competition. Permanently Awarded Nov. 16

The Iron Horse

THE SIEMON-McCLOSKEY Tractor is of the "two wheel, line drive" type; controlled by means of lines which permit the operator to ride upon the seat of the vehicle or implement to which it is attached.

Steering is accomplished by means of clutches in the jack shaft, one for either wheel. These clutches are of fabric, multiple disc type, running in oil, and while gentle in action, possess high efficiency and durability.

All moving parts are enclosed in dust-proof cases and run in oil, insuring long life with minimum attention.

In the "SIEMON-McCLOSKEY," we have overcome the criticism, "tractors do not last as does other machinery."

It will outwear any agricultural implement in use and with reasonable care its days of usefulness are unlimited, as every part subject to wear may be replaced at a reasonable cost. The motor is a special design, intended for tractor work only. Lightness has been sacrificed for sturdy, **rugged construction** and power. It is equipped with pressure oiling system and cooling effected by pump circulation.

Arm MOTOR

Buyers Demand Facts

Hundreds of records kept on the performance of Armleder Motor Truck show by actual figures that an Armleder is lowest in gasoline consumption—lowest in tire cost—lowest in operating and maintenance cost.

These records are sent to Armleder dealers, who use them effectively in closing sales.

They constitute the most valuable sales ammunition that could be used, for nothing is more convincing than facts.

Testimonial letters, repeat orders and rapidly increasing sales give overwhelming evidence that Armleder Trucks fully meet the most exacting requirements of truck users.

The O. ARMLEDER Company

leder

TRUCKS

Armleder Dealers Supply Them

We can easily convince you that Armleder Trucks operate at a lower cost per mile than any others you may contemplate selling We can show you, as an intelligent Truck Dealer, how Armleders are mechanically perfect—but we can do more than this. We can arouse your enthusiasm in Armleder value and service to such an extent that you'll reach for the contract and close up your territory before another gets it; provided it is not closed at present.

Find out about this. Perhaps your territory is one of those still open. It s worth your while to find out Write for the Armleder Book of Evidence, containing "The Armleder Feature Letters and Folders."

In justice to yourself, read these before you finally make your selection of a Motor Truck to sell in your locality.

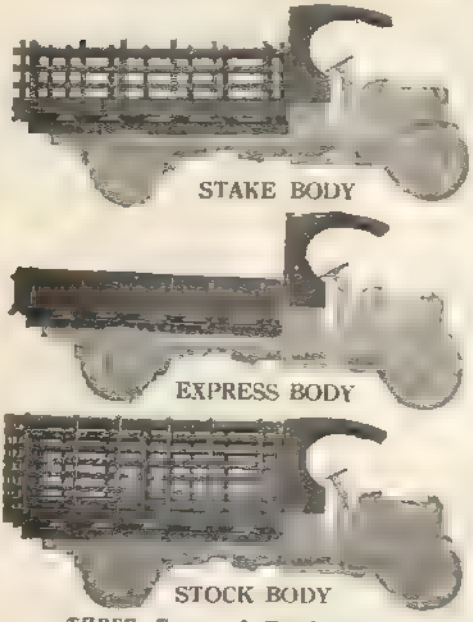
FEDERAL Truck equipped with a MARTIN-PARRY Multi-Service Stake Body.

MULTI-SERVICE BODIES for 1 to 3 Ton Trucks



THREE Types of Truck Bodies Interchangeable on ONE Platform

Dependable Bodies for Quality Trucks

MARTIN-PARRY Multi-Service Bodies have convincingly demonstrated their great utility and value in all kinds of motor truck service.

Their practical, standardized design, with its three-interchangeable-bodies feature—their sturdy dependable construction—their ability to stand long, hard use—have made them famous with truck dealers and users everywhere.

The dealer who sells Martin-Parry Bodies is backed by the largest and strongest commercial body-building organization in the world. The Martin-Parry line is *complete*—enabling the dealer to sell bodies in styles and sizes to meet every need of commercial car service.

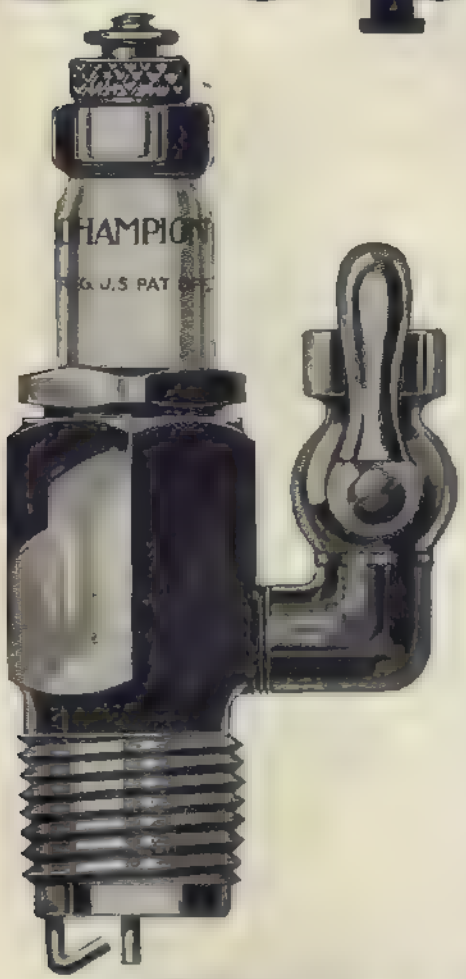
Depend



Champion Dependable Priming Plugs

For cars not equipped with priming cups, Champion Dependable Priming Plugs are a necessity for cold weather starting. For other cars, having priming cups, they are a decided advantage, because ordinary priming cups deliver the gasoline too far from the spark plug.

Champion Dependable Priming Plugs deliver the gasoline directly to the sparking point, where the spark cannot fail to ignite it.

Get ready now to meet the heavy winter demand for these sure-fire spark plugs.

FERRIS

THAT the Ferris Motor Car satisfies civilization's ideals, in style and construction and in its perfect adaptation to the carefully sensed requirements of a discriminating motor car public—is conclusively proven by its instant acceptance by the motor world.

On exhibit in the lobby of the Hotel Astor, the Ferris was the outstanding feature of the New York Motor Show.

The Ferris Motor Car was built by a company that has been engaged in the automotive field for nearly seven years. True to the finest traditions of the business, into its production have gone the concentrated skill and experience of a matured organization.

The original quota for the first year's production was entirely sold and the Ferris dealer organization practically completed while the first model was being built. A recently increased production quota permits the extension of the dealer organization to cover the entire country. Further details will be sent on request.

FERRIS

NEW CARS AT THE SHOWS

(Continued from page 237a)

Lafayette Eight Makes Its Debut

New Car Designed by D. McCall White Shows Result of Aviation Engineering Experience

As might be expected by any one familiar with the previous work of its designer, the new Lafayette car, shown in New York and Chicago during Automobile Show Week in those cities, is a highly developed 8-cylinder type, embodying many of the lessons in aviation engineering learned during the war. There is nothing about the car which might be termed radical or freakish, however.

The engine is of the V type with bore and stroke of 3¼ in. x 5¼ in., respectively, giving a piston displacement of 348 cu. in. and an N. A. C. C. hp. rating of 33.8. The cylinders are cast in two blocks of four each with the intake and exhaust manifolds integral and with detachable heads. Both the crankshaft and the camshaft are of the five bearing type and drilled for lightness and also to provide oil passages for the force-feed lubrication system. The camshaft and the fanshaft above it are driven by a silent chain provided with simple adjustment.

The cooling is by the pump system, a single pump feeding each block of cylinders independently from a common intake. The cylinder jacket water inlets are located at the center of the cylinder block. The radiator is of cellular type, fitted with vertical shutters operated by vacuum and thermostatically controlled

The starting, lighting and ignition units are of Delco make, the ignition system being of the dual type with all wiring enclosed in metal conduits. The storage battery is an Exide. The carburetor is a special Lafayette design, feeding the gas through an exhaust jacketed intake manifold.

Lafayette Eight in Touring Car Form

Vertical radiator shutters add a distinctive note to the appearance of the new Lafayette car. Note that the head lamps are mounted on a cross tube so that they can both be adjusted to the same angle at all times.

A multiple disk type clutch, three speed forward and reverse selective type transmission, single universal joint inclosed in an oil tight torque ball casing at the rear of the transmission, tubular propeller shaft and full floating rear axle of special Lafayette design and fitted with large Timken bearings, are the important units in the driving mechanism. The rear axle driving gears are of the spiral bevel type. Brakes are

TRADE ASSOCIATION ACTIVITIES

On the third Friday of each month, dinners are served before the meeting, generally at 6.30 P. M. Thus, the members get very well acquainted around the table and this combined with two, three or four good speakers, along live subjects pertaining to accessory or the automobile business, brings out a goodly number.

The officers elected for 1920 are: President, W. H. Metcalf, of the Wire Wheel Corp. of America; vice-president, George L. Fischer, J. H. McCullough Sons; treasurer, N. A. Petry, of the N. A. Petry Co.; secretary, A. W. Stellwag, Jr., of the Metropolitan Auto Supply Co. The board of governors consists of four officers and seven directors, in conjunction with the chairman of each of the standing committees. The meeting of the board of governors is held each month and much of the business of the association is attended to by this body.

The directors elected for 1920 to serve two years are, as follows: Geo. B. Shearer, Jr., H. E. Allmang. The directors to serve one year are: W. T. Bosworth, T. S. Eavanson, C. B. Vogt, C. H. Walz and W. R Walton.

The chairmen of the committees appointed for this coming year are: Entertainment, Geo. L. Carroll; Reception, E. N. Waters; Speakers' Committee, M. H. Robertson; Membership, M. B. Nason; Publicity, D. F. Hopkins; Legal, R. J. Cahall; By-Laws, H. H. Fouse.

The financial condition of this association is in very good shape. Victory Loan Bonds, totaling $400, have been purchased, and the treasury report shows close to $1000. The address of the secretary, A. W. Stellwag, Jr., is 716 N. Broad St.

A. D. A. Deals Blow to Piracy

NEW YORK CITY, Dec. 30.—The tendency among unscrupulous dealers and garage men of New York City and its vicinity to use without license or authorization the names of well known cars in connection with various businesses pertaining to repairing, overhauling and giving service on motor cars has been on the increase. These individuals and companies have listed themselves in telephone directories, etc., in such fashion that they appear next to the real agents and service station companies and cannot be differentiated from them by those not familiar with the trade. The public is easily deceived into believing that they are the authorized service stations.

Some of these pirates have even gone so far as to insert advertisements in the directory on the page opposite each listing to indicate that said persons were duly authorized repair specialists of these cars. Others have gone still farther and have had their advertisement placed at the foot of the same page on which appeared that of the duly authorized agent.

The situation was growing more and more serious and through the efforts of Harry Gardner, executive secretary of the Automobile Dealers' Association, Inc., New York City, together with Saul Myers, senior counsel for all firms interested and attorney for the Hudson Motor Car Co. of New York, Inc., it has been permanently put to an end. Judge Greenbaum, of the Supreme Court of New York, has restrained these trade pirates from continuing such practices and from making any arrangements with the telephone company for any objectionable listings and advertisements and has also restrained the company from publishing all such listings.

The Philadelphia Shows Eclipsed Past Events

The consensus of opinion of the dealers who exhibited at the Philadelphia Shows is that this year's event has been the "greatest ever." In the total number of cars exhibited, it has been unsurpassed. The Passenger Car Show, held during January 10 to 17, brought out well over 50,000 visitors. All dealers report a large number of good prospects and many sales. There were 54 car exhibitors, 70 different makes of passenger cars exhibited, totalling approximately 250 cars in all. The floor space was 100,000 sq. ft. and the valuation of the exhibits was estimated at $1,000,000. There were 29 exhibits of accessories exhibitors, including jobbers, manufacturers and dealers.

The Passenger Car Show, the 19th Annual, and the Truck Show, as well, were held in the Commercial Museum Building, 34th below Spruce St., the Passenger Car Show being under the auspices of the Philadelphia Auto Trade Association, and the Truck Show under the auspices of this association in conjunction with the Motor Truck Association.

Here's a good suggestion for a card or letter insert to boost sales of locks—"Don't Walk Home. LOCK YOUR CAR."—Automobile Club of Maryland.

able or easier to handle has been included in the Ferris car. In addition to the usual list, such as the motor driven horn, tool kit and jack, speedometer, pressure gage, gasoline gage, ignition and lighting switch with lock and foot and robe rails, the equipment includes an 8-day clock, power driven air compressor for tire inflation, motometer, cigar lighter, wheel carrier and extra wheel, windshield cleaner, muffler cutout switch, front and rear bumpers built integral with the frame, rear vision mirror on the left front fender, and luggage carrier in the rear of the body.

Paige Light Six Has Own Make Engine

One of the sensations of the show was the new 6-42 Paige, shown at New York for the first time. Not even the Paige dealer had been given an inkling of what the new car was to be, so that it was a surprise all 'round.

The motor in the new Paige, designed and built by the Paige Co., has six cylinders 3⅛ x 5, cast in block and integral with the crankcase. The motor is of the L head type, and the cylinder heads, cast in one piece, are removable. The valves have cast iron heads, are mounted on the right side of the motor, and are 1 7-16 in. in the clear. The lower part of the crankcase is closed by a stamped steel oil pan.

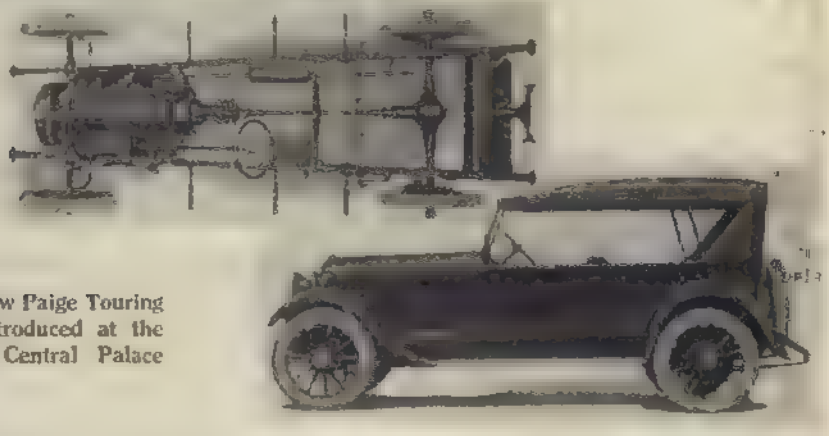
The crankshaft is 2⅛ in. in diam., with crank pins the same, and is supported by three bearings. The camshaft, also on three bearings, is 1 in. diam. between cams, and is driven by helical gears from the crankshaft.

Lubrication is by pressure feed to the main bearings, with splash to the rest. The oil pump, of the plunger type, is actuated by a cam off the camshaft at the center bearing. Oil capacity is 6 qt.

A one-inch Stromberg carburetor is used, Model MB-1, with hot stove. Stewart vacuum feed from a 17-gal. gas tank in the rear. A National Can Co. cellular radiator is used, the water circulation being maintained by centrifugal pump on right side of motor, driven from same shaft as ignition distributor and generator. This shaft is gear driven.

Atwater-Kent ignition is used, with automatic spark advance, and Gray & Davis starting and lighting system, with Willard storage battery.

At the Left is the New Paige 6-42 Sedan and Below at the Left is a Plan View of Chassis



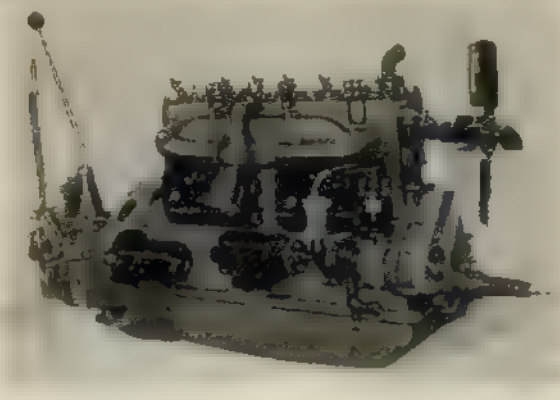
The New Paige Touring Car Introduced at the Grand Central Palace

NEW CARS AT THE SHOWS

The frame of the new chassis is of pressed steel, 6 in. deep, and the semi-elliptic springs are of exceptional length for a car of this size. The rear springs are 61¼ in. long and 2¼ in. wide, while the front springs are 38 x 2 in. The new chassis has 119 in. wheelbase. A Jacox steering gear is standard. Gits oil cups are used throughout.

The rear axle is Salisbury make, with drive from Detroit tubular shaft and universals. Brakes are 12 x 2 in. Wheels are of wood, with 32 x 4 in. Firestone tires as standard equipment.

Speedometer is a Stewart, driven from the transmission.



The Power Plant Used in the New Paige 6-42 Model is Made and Was Designed in the Paige Factory.

The new type will be built in the 5-pass. touring and sedan models, as exhibited at the show, and in the roadster and coupe models. Production of 20,000 is expected for 1920.

Westcott in Two-Tone Combinations

The new Westcott models manufactured by the Westcott Motor Car Co., Springfield, Ohio, and which were exhibited at the New York Show for the first time, are finished in a two-tone color combination which is a little unusual. A rather deep bevel extends along the sides of the body and is carried forward through the hood to the radiator. The upper face of the bevel and the top of the hood are finished in a lighter tone than the lower part of the body and hood. The same effect is carried out on the closed bodies also, in very much the same manner.

Some slight changes in the body and chassis design have been made in these cars also. As before, the Westcott is made in two sizes, the Lighter Six, with a wheelbase of 118 in., and the Larger Six, with 125 in. wheelbase. The two cars are very similar in appearance, specifications, equipment and in fact everything except size. In the new models the lower half of the windshield is stationary to eliminate leakage, and ventilation of the front compartment is provided by a cowl ventilator with dash control. The instrument board is very complete, including the combination lighting and ignition switch, speedometer, 8-day clock, ammeter, ventilator control, cigar lighter, spotlight plug, gasoline gage showing the quantity of fuel in the rear tank, flashlight, oil gage and radimeter.

The latter device, which appears on the 1920 Westcott for the first time, registers on the dash the heat of the cylinder water jacket at the outlet or hottest point.

A thermostat is used in the cooling system, but the radimeter shows the engine temperature at all times regardless of the condition of the thermostatic control. Both Westcott models have Continental engines, the larger car using the 9-N type and the smaller model the 7-R.

There has been practically no change in the past five or six years in the list of parts used in Westcott cars. Timken front and rear axles are standard. The starting, lighting and ignition units are of Delco make, the ignition having automatic spark advance as well as hand control. The clutch is a Borg & Beck; the transmission a Brown-Lipe and the drive by tubular propeller shafts on the Hotchkiss principle. Wood wheels are standard equipment, but wire or Disteel wheels may be had as optional equipment at extra cost.

FARM TRACTORS

Rex 12-25 Tractor

A FEATURE of the Rex 12-25 Tractor, being produced by the Leader Tractor Mfg. Co., Des Moines, Ia., is the Model RU-4 Waukesha engine, which is a four-cylinder and is set crosswise in the frame. The clutch on this tractor is a Bierman expanding-band clutch, made by the Foote-Strite Pulley Co. The transmission is sliding gear and has two speeds forward and one reverse and is made by the Leader company.

An Eisemann high-tension magneto is used. Kerosene fuel is fed by gravity from compartment tank, holding 20 gal. of kerosene and 5 gal. of gasoline, the latter for starting. The fuel tank is located lengthwise directly above the transmission case. The intake air is drawn through a Bennett dry air cleaner. The carburetor is a 1¼-in. Kingston.

Rex Tractor From the Front

This illustration shows the front axle design, belt pulley clearance and the pulley position on the Rex Tractor which is a 12-25 and has the engine set transversely.

The final drive is by open master pinion and gear. The front axle is a built up Elliott type and is clearly shown in the accompanying illustration

The Kingston single bowl carburetor and an exhaust-heated intake manifold is stated to provide means for adapting kerosene as the fuel on this machine. The tractor itself is 147 in. long, 78 in. wide, 68 in. high and three-quarters of the weight of the machine is on the rear drive wheels. The wheelbase is 94 in. Normal drawbar pull is 2400 lb. and the tractor will pull three 14-in. plows.

The engine is 4¼ x 5¾ in. The frame is strong and well braced and has 7-in. cross members. The engine flywheel is at the left, pinion and starting crank at the right and spark and magneto in front. This provides accessibility.

Cooling is by a Perfex radiator of standard design, mounted lengthwise on blocks of wood. The Oakes 18-in. fan is mounted on a steel bracket on the right of the radiator and draws the air through. It is inclosed in a suitable fan shroud. Circulation of the cooling water is by a centrifugal pump. The temperature of the cooling water is regulated by a Sylphon thermostat.

The seven transmission shaft bearings are the S. K. F. The transmission gears of special alloy steel are heat treated, according to specifications. They are entirely inclosed and run in oil. The gearing is such that the low or plowing speed is 2½ m.p.h., while the high or road speed is 4 m.p.h. The rear wheels have round spokes.

They are 60 in. diam., with 10-in. rims. They are regularly equipped with angle iron lugs of standard design.

The front wheels are of the same general construction as the rear wheels, except that they are equipped with mud bands and are 46 in. diam. with 4-in. wide rims. The front wheels have plain bearings.

The steering gear on the Rex tractor is unique and interesting. The steering rod passes diagonally down from the steering wheels on the left side. It is connected to the horizontal steering bar through a universal joint. The steering bar terminates in a steering worm, which meshes directly in a rack. The worm and rack unit are mounted on the left frame member at a point below the radiator. From the rear end of the track casting there extends a drag link which connects to the left steering knuckle arm. The cross-connecting or tie-rod which connects the right and left steering knuckles so that the front wheels will turn alike, passes across in front.

The drawbar on the Rex is pivoted to swing from side to side and is 20 in. above the ground. However, as the design of the tractor is such that the drive wheel runs in the furrow this lowers the drawbar at least 2 in.

Kinkade Model D Tractor

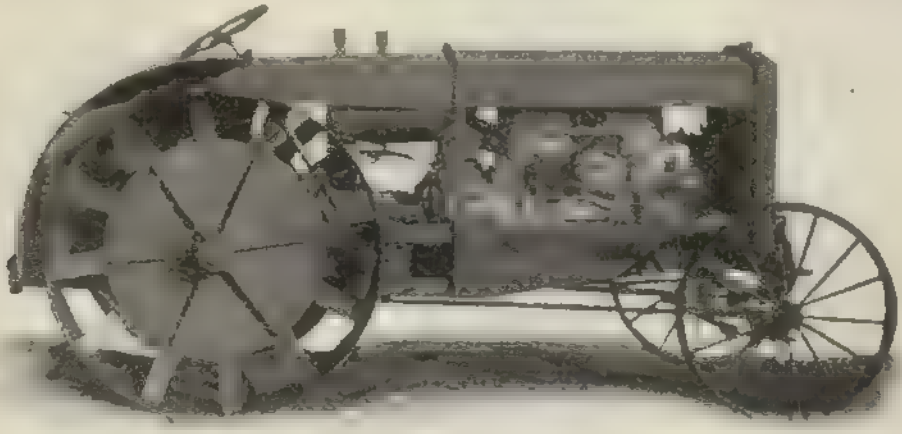
A TRACTOR recently introduced in the field is the Kinkade Model D. It is made by the Andrews Heating Co., of Minneapolis, Minn. This new tractor is a four wheeler, power being applied to the two rear wheels. The engine, a four-cylinder Climax, 5 x 6½ in., is placed longitudinally in the chassis frame. The frame is of unusual construction, as can be seen from the accompanying illustration.

The Climax engine is suspended in four brackets secured to the frame. The magneto, water pump and governor are on the same shaft on the right side of the engine. The shaft is driven off the crankshaft through spur gears.

Cooling is provided by a Spirex radiator. The engine power is transmitted to the speed-change gears through a seven-plate dry-disk clutch. The transmission is the progressive sliding-gear type of the company's own make. The forward speeds provided are 2½ and 3¼ miles an hour.

There is a large cast housing in which the final-drive bull gear is cast integral. This housing forms the hub of the rear wheel. The spokes are very short and are bolted to bosses around the periphery of the combination gear-housing and wheel-hub.

The tractor frame is of unusual construction. It is a type of trestle construction and is made of angle iron. Its construction is shown in the side view of the tractor. This frame, and consequently the entire tractor, is suspended on three points and cushioned against shocks by a semi-elliptic spring in front. This spring is attached to the frame through a swivel con-



Right Side of the New Kinkade Tractor

This tractor has a 20-40 rating, has a Climax engine, 5 x 6½ in., and parts are well protected against dirt. It weighs about 5000 lb.

Protect Your Trucks from *Destructive Vibration*

JAXON
FULL FLOATING WHEELS

absorb road shock and vibration. They do so through the six resilient cushions which are right within the wheels themselves. This eliminates the most costly item in truck operation, together with the larger share of the truck dealers' "trouble" with customers.

You protect your trucks from wear and tear and build up your customers' good will when you recommend JAXON Full Floating Wheels.

DISC WHEELS

the
WHEELS
OF
PROGRESS

Eight Reasons *Why* They Are Superior

1. They add distinction to every car—large or small—in perfect keeping with modern stream line design.
2. They are lighter than wood or other wheels. No heavy demountable rim, extra felloe or double hub.
3. Their strength protects against injury in skidding accidents or collisions. Michelin wheels never break.
4. They are easier to clean and they stay clean longer. Nothing to collect dirt. They hide the car's unsightly underbody.
5. They are simplicity itself. Nothing to get loose or out of order; nothing to squeak, dry-up or break.
6. They save tires by radiating heat. The 34x4 wheel, for example, has over 1100 square inches of radiating surface.
7. They make tire changing easier. Loosen the four or six lock-nuts, and slip the entire wheel off—that is all.
8. They help the sale of a car, giving it that up-to-date appearance which is so much sought after these days.

ANNOUNCING A TRUCK
THAT HAULS MORE AT HIGHER SPEED

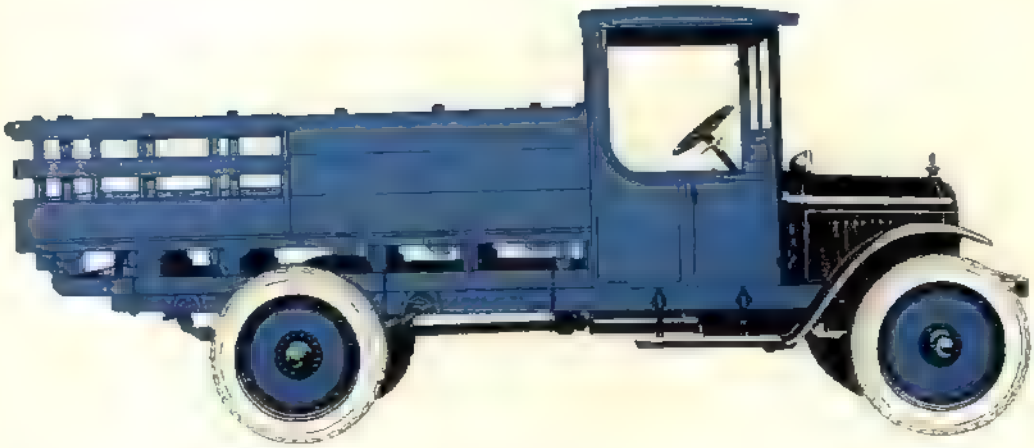
Contact with thousands of truck users has shown us two definite tendencies in the selection of motor truck equipment.

A turn from "light delivery" to trucks of real truck capacity.

The acceptance of truck cord pneumatic tires as ultimate truck economy.

From its inception Graham Brothers Speed Truck has been designed and built to carry a full ton-and-a-half load safely and efficiently at twenty-two miles an hour.

GRAHAM BROTHERS
SPEED TRUCK



Graham Brothers Speed Truck carries one and a half tons, the scientific load for all average hauling.

The engine has four cylinders, $3\frac{3}{4} \times 5$, cast enblock. The three-point flexible spring suspension eliminates strains on the crankcase.

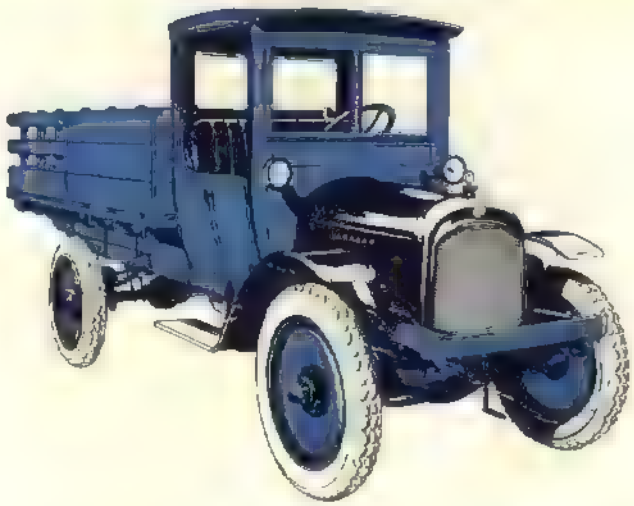
The radiator is of the removable core type, incased in a pressed steel shell, and mounted on flexible springs. Thermo-syphon cooling system.

The ignition and lighting are supplied by a high tension magneto-generator set.

An improved carburetor is used, equipped with superheated air device.

The transmission in this unit power plant is built with over-size gears. Multiple plate dry-disc clutch.

The drive is through a two-piece, three universal-joint propeller shaft, supported in the center on a self-aligning bearing.



An internal-gear type rear axle furnishes the final drive. Both front and rear axles are equipped with taper roller bearings.

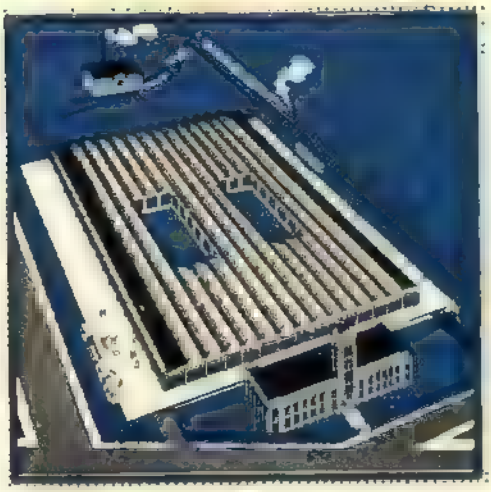
The springs are over-size and of unusual flexibility. Large spring bolts, in bronze bushings.

The Disteel wheels are mounted with truck-cord pneumatic tires, 36 x 6 rear and 35 x 5 front.

Control and steering are arranged for passenger-car ease of operation.

The equipment includes electric head and tail lamps, electric horn, electric storage battery, engine driven tire pump, odometer, speed governor, motometer and set of good tools and jack.

A complete line of body and cab equipment, all built by Graham Brothers, covers practically all hauling requirements.



First the motor truck was thought of only as a load-carrying giant, slow-gaited, solid tired and extremely heavy.

Then came the pneumatic tired commercial car, light and fast, but of very limited capacity.

But in the ultimate truck, the elements of strength and speed must be combined.

Not by merely equipping the heavy truck with pneumatic tires.

Not by just strengthening the load-carrying parts of the light delivery car.

Every product, every part, that goes into Graham Brothers Speed Truck has been selected or built to economically haul more at higher speed.

GRAHAM BROTHERS

EVANSVILLE, INDIANA, U.S.A.

Converting Scrap Parts Into Useful Tools

BY converting scrap parts into useful tools, you can make them worth considerably more to you than the price they would bring if sold for junk. The illustration shows an old drive shaft made into a combination turning bar and fan pulley remover. The first part of this tool is made by bending the shaft at right angles near the universal joint end. This tool may be used as shown in the illustration for cranking an engine or turning it over through the transmission before the starting crank has been put into place. The yoke, or second part of this tool, is made by splitting the rear end with a hack saw while cold, or with a cold chisel when hot, and then spreading. This yoke is

Fig. 1. Several Useful Tools Can be Made From Scrap Driveshafts

very convenient for trying the end play of the crankshaft. Pry out the shaft with the yoke as shown and then force it back. This will give a fair idea of the amount of end play. When the starting crank and pin are removed the yoke may be used to force the pulley off shaft, by inserting behind pulley.

Another scrap drive shaft may also be made into a tool for use as a lifting bar, as shown in the cut. This is done by cutting it off about 16 inches from the universal joint end of the shaft. When the square end is inserted in the end of the transmission, this tool provides a purchase for lifting the engine from the crankcase, floor or bench.

Scrap front radius rods may be used to good advantage in making stock racks and horses for use in the stock room and repair shop. The illustration shows a rack that may be made to carry a stock of front radius rods. It is made of two old front radius rods, connected with two sections of running board truss rod and a 1-in. pipe. The pipe is bolted between the two ball ends of the radius rods by means of a section of truss rod running through the ball ends. Two fan pulley pins are driven in holes drilled near the end of the pipe. These pins

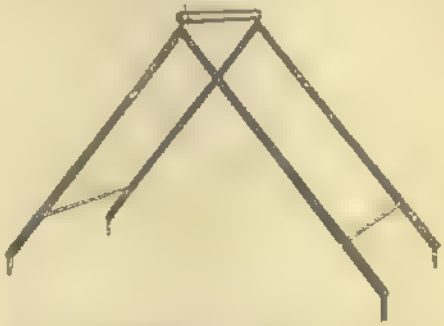

Fig. 2. Storage Rack for Front Radius Rods

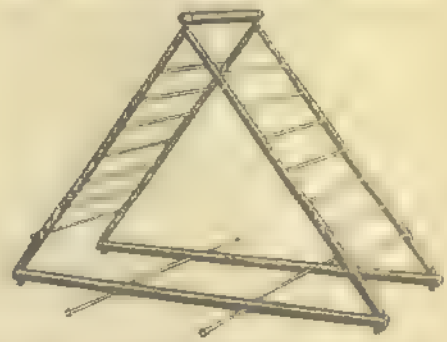

Fig. 3. Rack for Holding Spring Leaves

stick up so that the radius rods placed on the rack will not fall off.

Another illustration shows a rack on which to stock spring leaves. It is constructed with two front radius rods, a section of 1-in. pipe for the top, and two 40-in. sections of 1-in. pipe for the base. Sections of running board truss rod are used for bars. There are seven bars on each side, two longer bars at the base, and a section of truss rod holds the ball ends of the radius rods to the pipe. The shortest front spring leaves are laid on the two top bars, while the longest front spring leaves are carried by the two lowest

bars. Camshafts can also be placed on the two long bars at the base

The "horse" shown in the next illustration is constructed of two front radius rods, sections of running board truss rod, one steering gear connecting rod, and a piece of 1-in. pipe. The ends of the radius rods are

Fig. 4. Car Support or Horse Made From Scrap Parts

cut off, and ⅝-in. holes are drilled through the ball ends and through the rods, at about eight inches from the ball end Sections of spindle connecting rod are installed between the side members of the rods by using the sections of truss rods. The ball ends of the radius rods are bolted to the pipe by a truss rod section. The steering gear connection rod is cut in half, and the ball ends are ground so that they fit the ½-in. gas pipe connecting the side members of the radius rod. The other ends of the steering gear connecting rod are riveted to the 1 in. pipe These horses are used for supporting the weight of the car while a man is working on it, and for miscellaneous purposes.

Radius Rod Support Made by Dow Wire & Iron Works

The accompanying illustration shows the Perfection Radius Rod Support, made by the Dow Wire & Iron Works, Inc., Louisville, Ky. This device is for strengthening the

Perfection Radius Rod Support

This is a quickly attached radius rod support made of steel angle. The price is $2 50

Ford car and to keep the front axle in perfect alignment all of the time. It is claimed to reduce wear on the bushings and bearings of the front assembly and insure safe steering. It is made of 1 x 1 x ⅛-in. steel angle and equipped with this concern's twin hook bolt. This feature grips the radius rod firmly at the crotch and will not allow it to become loose or rattle. The price is $2 50.

An Adjustable Radius Rod

The purpose of the Adjustable Torque Radius Rods is to give perfect steering control, which is an assurance of safety. It also eliminates the original Ford Radius Rod

The Adjustable Torque Radius Rod is made of malleable castings and is designed with a ball and socket, held in position with heavy duty springs to absorb the shock. The ball socket makes it flexible so that it does not interfere with the spring action. The front end of the Adjustable Torque Radius Rod is bolted to the axle with ⅝ x 3¾-in bolts through the hole in the spring perch to which the original Ford radius rod was

Adjustable Torque Radius for Ford Passenger Cars and Trucks

This device is manufactured for [illegible] an assurance [illegible] strain off the [illegible] on the frame

bolted. It also extends to the bottom of the axle and has a hole drilled in it to fit the bottom of the spring perch. The spring perch nut is removed and after the radius is set in place the nut is put back on and tightened. This assures a firm hold on the axle and will not permit any lost motion.

The rear end is made to fit flat and snug against the side and bottom of the frame and has two holes on the side and two on the bottom so it can be bolted rigidly to the frame.

Another important feature is that it removes the strain, jar and vibration from the crankcase and reduces the chances of cracked crankcases, broken crankcase arms, oil leaks, etc., which mean a longer life to the engine and greatly reduces the cost of maintenance.

There is only one place in the Adjustable Torque Radius Rods that needs lubrication

and that is the ball socket, which requires a few drops of oil occasionally.

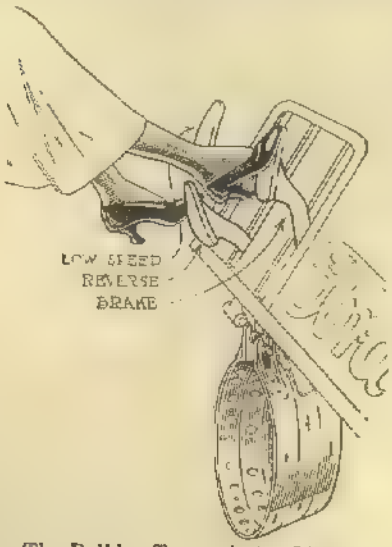
It is manufactured by the Hudford Co., of 1446 Wabash Ave., Chicago The price is $18 per pair.

Manifold and Vacuum Cup Transmission Band Lining

The Reardon Co., Inc., Peoria, Ill., is marketing the Bull Dog brand of Manifold and Transmission Lining for Ford cars. The latter product is made of chemically treated

The Reardon Bulldog Manifold

The intake manifold is completely enveloped by the exhaust, thus super-heating the mixture and giving a dry gas before entering the engine.



The Bulldog Transmission Liner

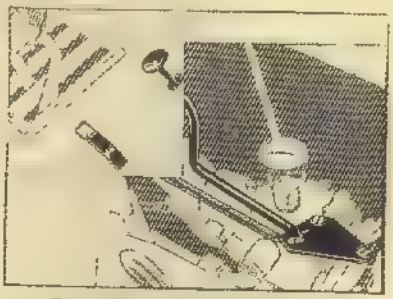
These reliners are made of a chemically treated wood and have 21 vacuum cups running in oil.

wood with 21 vacuum cups. The feature is that they will give exceptionally long service. These linings are sold at $3 per set of three complete.

The manifold is so constructed that the exhaust envelops the intake portion. Thus a dry mixture passes to the engine, which is stated to give a greater mileage and improve the engine operation. In the center of the manifold is a priming valve to assist starting. This device enables the use of a lower grade fuel. It sells at $10 complete.

Accelerator for Ford Cars

A new accelerator that is easy to install and simply designed, is being made by the C. H. Rice Co., Cherokee, Ia. The price of this accelerator is $1 50. It is made to be placed at the right of the brake pedal and



The Sense Foot Accelerator

This illustration shows the location of the foot accelerator and foot rest. The top is unscrewed to remove the floor board.

so located that it will not be depressed accidentally when applying the brakes. It has one working joint where the main push rod couples through the plate, which is attached to the carburetor. The maker states this accelerator operates easily and will not pull the hand throttle closed, due to the fact that a light coil spring is used

Automatic Rocker Dump Body for the Ford Truck

A new Automatic Rocker Dump Body for the Ford truck has been brought out by the Anthony Co., Inc., Streator, Ill. The two big features of this body are that it will automatically dump upon being released and return again requiring no power, and moreover, it is very easily attached. A slight pressure on the lever at the center of the driver's seat releases the loaded body, which tips to a 50 deg. angle. When empty the body will return to a horizontal position. This body is made in one and one-and-a half yard capacities and is of steel and malleable iron.

The opening of the tail gate is automatic in that, when the body has assumed a 50

FORD SECTION

deg. angle, it is unlatched by the lever, pressing upon the rear tire. The relatching of the tail gate is accomplished from the driver's seat by a lever at the left front body corner. Loads can be dumped without stopping the truck. The load in this body is carried well forward of the rear axle

This new dumping body will fit the Ford truck frame without any alterations. The rocking cams provide the automatic action, these operating in the inverted "V"-shaped racks fastened to the chassis by bolts which pass through the standard holes in the rear member of the chassis frame. The front end of the racks are carried upon brackets attached to the chassis frame by four "U" bolts. The front support is a malleable iron shaped "A" frame resting upon the chassis back of the driver's seat and secured by "U" bolts

The Anthony Dumping Body

This is an automatic dumping and return body which requires no power and is easily attached. It is made in 1 and 1½ yard capacity

the extension shaft in position, the timer fitting on top of the device. The bevel gear of the extension fits the other bevel gear, which is installed where the timer was located

Stay-Clean Timer Outfit

This is a device to raise the wires and timer away from a point where they might become saturated with oil and water, thus causing short circuit

A Device to Elevate the Timer of the Ford Car

A new device, known as the "Stay Clean" Timer, the purpose of which is to raise the timer and wires up from where they might become saturated with oil or water, has been brought out by the Milwaukee Air Power Pump Co., 886 Third St., Milwaukee, Wis. The price of this device is $6.

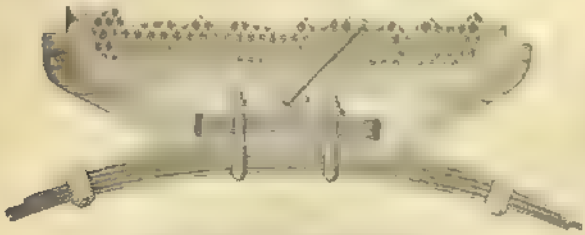
The timer extension body is cast iron and the shaft is cold rolled shafting. The mitre gears are phosphor bronze. The other parts used in the timing system are the standard parts of the Ford car. With a device of this sort, the timer is raised up where it can be cleaned easily and inspected as well and any misfiring from this source can be readily gotten to and cured. In installing, it is necessary to remove the timer and place

Lubricator and Spring Support for the Ford Front

A new device to strengthen and lubricate the front springs of the Ford car has been brought out by the Boel Mfg Co., Plymouth Bldg., Minneapolis, Minn. This device forms a spring support. It is curved to the same degree that a new spring is and this spring support is thin in the center and increases in thickness from the center to both ends where it is 1¼ in. thick. This device is so shaped at the upper edge that it makes a perfect fit under the channel and on the spring. It is also curved out so as to fit on the bolt end that goes through the center of the spring. The maker states this construction takes the weight from the center of the spring and distributes it to two points of suspension at each end of the steel spring

FORD SECTION

support. With this device is furnished two extra long drop-forged steel clips to allow for the additional thickness of the spring support and a license bracket. The spring support is so spaced on the bottom, on each side, to provide a chamber for oil waste to lubricate the spring leaves. The price of this device is $2 50



The Wilber Spring Support

This illustration shows this spring support in position on the Ford car. This device provides lubrication of the springs and makes the car ride easier.

New Lock for Ford Cars

The Masters new lock for the Ford car, which locks the gears in the steering apparatus at the top of the steering columns, is being produced by the Masters Mfg. Co., 67 Woolsey Sq., Jamaica Plain, Boston, Mass. It sells at $7 50.

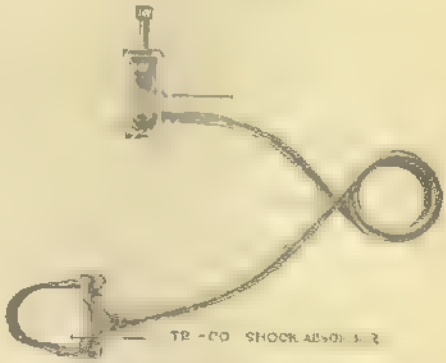
This lock accomplishes its purpose by three locking wedges or bolts which, in rising, intermesh with the internal gear and hold it so that the front wheels cannot be turned. The accompanying illustration shows the construction. The lock is a cylinder Yale. The lock is made of bronze and steel and is very sturdily constructed, because the bolts must rise before meshing with the internal gear and a spring is used to keep the locking bolts below the internal gear except when raised by the key. There is no danger of its locking while the car is being operated.

Master "Steal-Proof" Lock

This device locks the internal gear in the steering column by three wedges or bolts, so that the front wheels cannot be turned.

Bayne Bolt Tightener for Fords

A new device has been placed on the market to retain the proper tension on the Ford fan belt. It is known as the "BB" Belt Tightener and is manufactured by the Bayne Mfg. Co., Bushnell, Ill. It is made of two pieces of flat spring steel with a hook bolt and a wing nut. The springs retain the proper tension on the fan belt, which tension is adjustable by the wing nut. The price of this device is $.



The Tri-Co Shock Absorber

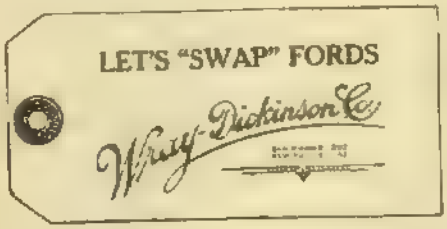
The Tri-Co Shock Absorber, illustrated herewith is made by the Tri-Continental Corp., Buffalo, N. Y., and is designed for use on the Ford car and truck. The upper end attaches to the frame of the car and the lower clip is a friction fit to the rear housing and front axle. The maker states that this shock absorber prevents quick up throw and down throw of the car and eliminates much of the lateral action, preventing side sway. The price complete for set of four is $15.

Just at present cars practically sell themselves. But that condition won't last forever. Now is the time to build up your selling organization, so that you can continue to SELL cars when the supply exceeds the demand. Read "Car Sales Policies That Pay" in the March Merchandising Number. You may get some valuable pointers from it.

FORD SECTION

Here's a Way to "Swap" Fords

George D. Wray, president of the Wray-Dickenson Co., of Shreveport, La., believes in trading in just as many Fords as he can, for each one means a new Ford going out, and there is good money in rebuilt Ford cars these days. He makes his profit on the new car, and on the old as well. Incidentally Mr. Wray has one of the handsomest and most successful Ford dealers' plants in the United States, so his plan of trade-ins



must be worth while. One of his best methods of getting Ford owners to bring their cars to his place of business to trade in consists of sending a man out every Saturday or holiday, or whenever there is an unusual crowd in the city, supplied with tags like the illustration herewith. These tags are in green or red, and have a bit of soft wire run through the eyelet. A tag is quickly wired to the steering wheel of every Ford along the various curbs, and when each owner returns he finds the suggestion to "swap" his car right where he can't overlook it.

Mr. Wray says the plan has proved very successful this past year, and that many owners who hadn't hitherto considered the matter seriously unconsciously let the suggestion on the tag do the business, and eventually brought their cars in to see what they could do in the way of a trade, usually to find that they departed with a new car.

All traded in Fords in the Wray-Dickenson shops are thoroughly overhauled and rebuilt before being resold, so that a customer getting a second-hand car is assured of getting his full money's worth. Every item of labor and material is charged against the car, so that the selling price is made big enough to leave a profit on the transaction

The Wray-Dickenson plant is departmentized throughout, and so jealous are the various department employees that their particular department shall pay a profit each month, that they keep a very sharp lookout to see that the no charge is made against them that is not justified. This tends to make certain the proper charges against every department, so that costs are easily figured and profit or loss may be determined successfully.

"The reason many a department doesn't show profits will be found in the improper charges that are made against that department where a strict watch is not kept on employees," says Mr. Wray. "If you can build up department spirit and loyalty in your organization you will have little trouble in arriving at accurate cost figures on the various jobs going through the shops, for the employees of each department will see to it that no charge is slipped over on them by any other department. I have watched it in my own organization and find that the various departmental employees are on the lookout all the time for that sort of thing They won't stand for it."

The Emco Grease Retainers Installed

The accompanying illustration shows the Grease Retainers manufactured by the Emco Mfg. Co., Inc., Binghamton, N. Y., for the rear axles of Ford cars. The purpose of this device is to keep the brakes free from oil and to prevent waste of lubricant and damage to the tire through oil. They are installed by removing the rear wheel and bearing and slipping them into place. They consist of centrifugal coil springs which direct the oil to the center of the axle. The price is $ 50 a pair.

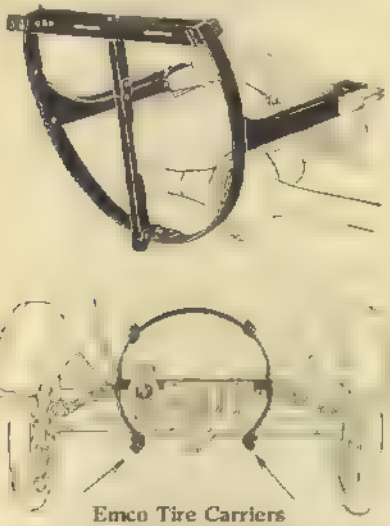
One of the Smith Electric Adaptors for Ford Oil Lamps

The product illustrated herewith is made by the F. A. Smith Mfg. Co., Inc., Rochester, N. Y. It can be snapped in the front flange of the rear light and provides electric tail light service in place of the oil. There are two bulbs, one for operating from the magneto, an 18-volt, and the other is a 1.5-volt for dry cell operation when the engine is silent. The price complete with bulb and wire is $1 75; with the bulb and wire, the price is $.55.

FORD SECTION

Emco Tire Carriers for Fords and Chevrolets

Two types of tire carriers are being turned out by the Emco Mfg. Co., Inc., Binghamton, N. Y. These tire carriers are adaptable for Ford and Chevrolet cars, three types for the Ford car and two for the Chevrolet. The Ford type for two clincher tires, one 30 x 3-in. and one 30 x 3½-in., sells at $6. The Ford type for one demountable rim sells for $5.50 and the Ford type for two demountable rims sells at $6. The Chevrolet type for one demountable rim sells at $5.50 and for two rims $6. The feature of the clincher tire carrier for the Ford car is the ease with which the tire can be removed by simply lifting it upward and compressing the carrier ring, the tire can be slipped forward and free from the carrier.



Emco Tire Carriers

Two styles are made, these being shown herewith. The upper is the Ford clincher tire carrier and the lower one is the demountable type

The demountable type feature is the toggle locking device. The toggle arm is easily operated and when pushed forward the tire will swing toward you from the bottom and then can be easily lifted from the carrier. The toggle joint can then be pulled back into position by hand and locked

Display for Staybestos Transmission Lining

The new attractive dealer's display rack for the Universal assortment of lining being offered to the dealer and garagemen by Staybestos Mfg. Co., of Philadelphia, is shown herewith. This dealer's help displays, in an inviting way, the Universal transmission lining, which is sold complete in proper lengths for Ford transmission bands, together with rivets. This display stand is 11 in. high and the lower part holds a box of lining. It measures approximately 7 in. in width and 6 in. in depth. It is furnished the dealer with each carton of 12 Universal packages. The design is handsomely finished in black and orange

Ford Reamer Sets

The accompanying illustration shows the Ford Service Set No. 1, produced by the Keystone Reamer & Tool Co., Millersburg, Pa. The price is $160. It is a combination set of hand and expansion reamers, especially made up for taking care of the various bushing needs on the Ford car. The set is packed in a hardwood chest and equipped with a lock and key.

FORD SECTION

Care of Ford Fan Belt

Engineers, in designing the fan on the Model T Ford motor, calculated to have the fan draw a certain amount of air through the radiator. Naturally, as the speed of the engine increases, it is necessary to have more air to keep the radiator cool, and this is done automatically by the fan assembly. The proper working of the fan at any engine speed, and hence, the suction of the required amount of air, is solely dependent on the fan belt. It is accordingly important that the fan belt be kept in good working order.

When installing the fan belt, the pulleys should first be lined up carefully with a straight edge, across the sides of both pulleys. Then loosen the fan bracket allowing the fan to drop to its lowest position and put the belt over the fan and around the fan pulley, work the belt around the crankshaft pulley with the hands; never use sharp tools for this purpose. Next, raise the fan until it is fairly tight. When the belt is in proper adjustment, one should be able to turn the fan but not spin it by pressing on the blades with the fingers. With the belt adjusted to the proper tension, securely fasten the nut on the fan bracket bolt. If the belt is too tight, it will have a tendency to draw one of the pulleys out of line, causing the belt to fray at the edge. In fact, a belt with a frayed edge indicates that one of the pulleys over which the fan belt runs, is out of line. If this condition is prevented, the life of the belt will be prolonged. If the belt slips and does not drive the fan, it is too loose and should be tightened as explained above. A slipping belt will wear or burn out much quicker than a belt which is properly adjusted. It is important to remember, however, that more trouble is caused by belts being too tight than by their being too loose. Belt dressings or oils should not be used on the belt adopted as standard equipment on Ford cars

We're not out of the woods yet on the railroad transportation problem. Help out every way you can. Unload incoming cars promptly. Use motor trucks wherever possible, especially on short hauls. Fill railroad cars to capacity, and calculate your orders on the full carload basis whenever you can. Drive cars from the factory. Boost Good Roads, well-kept roads, a Federal Highway system, and the Motor Transport idea. Every little bit helps.

* * *

Invisible drip pans for show room cars. Good idea. Explained fully in the March number

Classiford Bodies

The Dayton Metal Body Co., recently organized in Dayton, O., is turning out from its new factory, located just north of Dayton, the Classiford Bodies illustrated herewith. One of these bodies is a five-passenger touring body and the other a roadster. The touring model equipment consists of a body, top, windshield hood, radiator shell, mud guard over the front axle, filler, cap crown fenders, running boards, running board shields, gasoline tank in the rear, Stewart vacuum feed tank and a tire carrier. The finish can be had in several standard colors. The roadster body also illustrated herewith is quite attractive. The equipment for it is the same as that of the touring. These bodies give new lines to the Ford car and greatly enhance their appearance. Oval shaped lights are furnished in the rear of the top.

LOCKTITE PATCH CO.

DETROIT, MICHIGAN WINDSOR, ONTARIO

Every Owner of a 1920 Ford Will Want This New Battery Box

Because: It is a new GLOBE Box designed especially for the 1920 Ford battery.

GLOBE Battery Box C-108-FBS. Inside dimensions 9⅜" long, 7⅞" wide 10⅛" high. Finished in fine black enamel. Two suitcase catches to hold down the snug-fitting lid.

It's convenient. The present battery is in an awkward, inconvenient location under the rear seat. This GLOBE Box—C-108-FBS—permits the battery to be kept in an accessible place on the running-board where it can be tested easily and frequently.

It protects the battery against mud, water, snow and sleet which are likely to destroy the battery case and the battery.

Every Ford owner knows that the efficiency of his battery and the length of battery usefulness are worth many times the cost of this box.

Sectional view. Note cable slots and the hold-down rods which anchor the storage battery solidly, preventing vibration.

List Price, $3.00 Each

Nothing but Advance Cork Insert Takes Out the Rattle and Jar!

MERELY changing linings in a Ford won't stop the rattle and jar. Soon, new linings get hard, oil soaked and slick. Then, again, rattle and jar when you start or stop.

Plain linings cannot stop the rattle and jar!

Ford cars need Advance Cork Insert Linings.

Advance Cork Insert Linings never get a hard, slick surface. The cork surfaces always remain soft, smooth and velvety. They do not soak up oil.

Advance Cork Insert Lining outwears three sets of any other lining—always gives a sure, smooth brake.

When you change linings always insist on Advance Cork Insert because it lasts so long and is the only lining that makes a Ford run smooth.

DOES A FULL DAY'S JOB IN 20 MINUTES—NO TEARING DOWN OF THE MOTOR

THE REGULAR ARM THAT HOLDS THE FORD ENGINE TO THE FRAME BREAKS EASILY

The old method of repair was to take engine out of the chassis for a riveting or a welding job or purchase a new crankcase, and then re-assemble, which consumes at least a day's time. The new starter model makes this work even more difficult because of the necessity of disconnecting and re-assembling gears

THE HUDSON CRANKCASE REPAIR ARM DOES THE JOB IN 20 MINUTES—WITHOUT TEARING DOWN THE MOTOR

Makes Speedsters Out of FORDS

NO longer need the Ford be left far behind in a whirlwind of dust as the higher-powered car sweeps on ahead. By the simple installation of higher gear ratios, as high as 60 miles an hour can be attained with the Ford without any racing of the motor whatever, and at a saving in the consumption of fuel.

The Ford Motor has sufficient power to take care of a higher gear ratio than the standard 3 63–1. By substituting our special ratios of 2¾–1 for the racy type, or 3–1 for general driving, more power and speed are obtained.

Our lower gear ratio of 4–1 is for use on Ford commercial cars—it affords that extra power for negotiating steep hills and sandy roads. Price $15.00.

These gears are machine cut, nickel gears, and are quality in every respect and guaranteed against defective material or workmanship.

SAME RATIOS AND PRICE FOR THE CHEVROLET

A Big Market for These Special Gear Ratios, Mr. Dealer

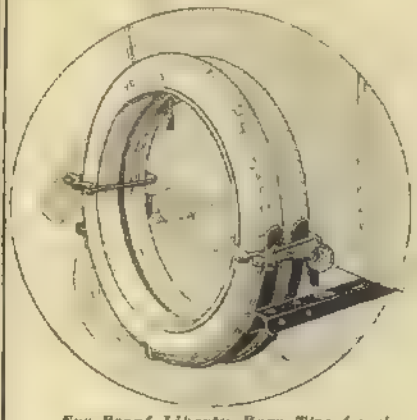
Fox Proof Reserve Tank for Fords—$1.50 in U. S.

Warns You Against Running Out of Gasoline

So simple, it's so efficient, and means so much to Ford drivers This Fox-Proof Self-Filling Gasoline Reserve Tank for Fords holds enough "gas" to run a Ford two to five miles Fits into the main tank and takes its reserve supply automatically every time you fill your tank. No more delays no more long walks to a gasoline station. Isn't this tank mighty good insurance against inconvenience? Made of heavy rust-proof galvanized metal, can't wear out. Is tank cap, gauge, primer and reserve tank all in one. Price anywhere in the U. S.—**$1.50.**

Rigid, Noiseless, Thief-Proof Carrier for 2 Tires

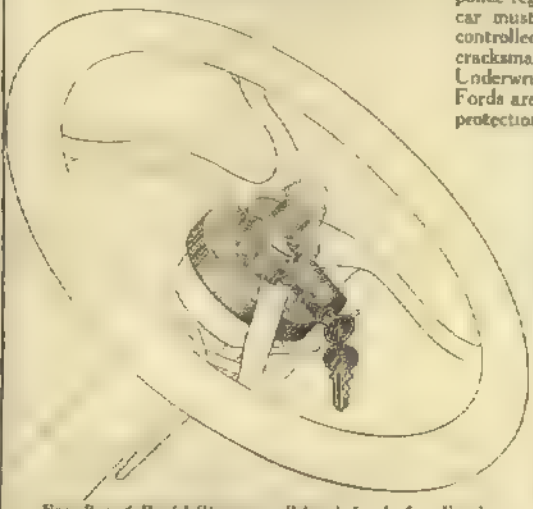
"Sure it's the best carrier I've ever seen," said a Ford owner. It locks two tires, with or without demountable rims, rigidly vertical at the rear. Attaches by means of two strong iron angles between frame and body—and locks tires with two heavy patent clamps that do away with straps, chains or weak metal bands. Drilled for rear bumper, too Thus the Fox-Proof Liberty Rear Tire Carrier with one installation provides tire carrier, bumper support, license bracket and tail-light bracket. Think of it, the Fox Proof Liberty locks tires rigidly vertical—they can't mar body; it's thief-proof—noiseless—can't rattle or shake loose—can't wear out. The shrewdest Ford owners won't have anything but a Fox-Proof Liberty because it does away with all haphazard makeshifts. Price anywhere in the U. S $12.50.



Fox-Proof Liberty Rear Tire Carrier $12.50 in U. S.

Now THE MOST ADVANCED *Auto Lock*

The Fox-Proof ***Rigid*** Steering Wheel Lock defeats the thief with his one-man-tow-bar—***does not change Ford steering design*** or weaken mechanism Locks front wheels rigidly straight ahead to meet fire or police regulations; and cramped right or left for safety when car must be left on a grade. The ⅞" vault type bolt controlled by a Yale type lock absolutely defies the auto lock cracksman. He cannot pick it—there's no master key Underwriter's approval earns theft premium reduction when Fords are Fox-Proof equipped. No other lock offers equal protection and security. Be sure it's a Fox-Proof ***rigid*** lock.



Fox-Proof Rigid Steering Wheel Lock for Fords $7.00 in U. S.

Standard 14-inch black enamelled spider and lock, $7.00 anywhere in the U. S For those who wish a higher degree of refinement, we can furnish a 14-inch or 17-inch nickel spider with lock, with beautiful walnut rim on the latter.

These are all the latest steps in furthering and protecting Ford service. They are new, unique and quality all through. See your dealer, but if he hasn't stocked them, send us your order direct, mentioning his name.

DEALERS: We are getting our line into your hands as rapidly as possible. If you haven't lined up, write us.

The Fairbanks Battery Charging Outfit

How to Improve

YOUR repair shop with its labor-saving machines makes short work of overhaul jobs on motors, axles, and transmissions. To improve it install equipment that will locate and repair your ignition, lighting and starting troubles.

The Fairbanks line of electrical service station equipment fills this need completely and is backed by the well-known "Fairbanks O. K."

No matter what your battery charging requirements are there is a Fairbanks Charging Outfit that will meet them efficiently and economically.

The vertical Motor-Generators used have established a new standard of perfection in their ball-bearing construction, low operating temperature, freedom from vibration, and automatic lubrication.

The switchboard framework is arranged so that other separate units may be added

as desired. Thus your installation grows with your business.

The paralleling switches at the bottom of the panel permit charging at double rate for any desired time, shortening the charging time to meet urgent requirements.

Generator, starting motor, coil and magneto troubles are completely taken care of by the F-B Test Stand and the Fairbanks Coil Unit and Magneto Test Stand. They are used to detect and repair *all* troubles that develop in these units.

Install this equipment and be prepared to meet every demand in the electrical repair line. This means more profits, time saved, and customers satisfied by modern service.

There is a Fairbanks Branch House near you. Send for Catalogue 10—better yet, drop in and see these devices in operation.

AND
TRUCK BODIES

Two Million Dollars' Worth to Go Into Service in 1920

Greater Body Building Facilities

More than two million dollars' worth of Moline bodies will go into service on Ford Ton Trucks and Model T chassis in 1920—due to the new and vast facilities of the Moline Plow Company Body Works, now one of the largest builders of such bodies in America.

New Features in Design and Construction

New features, stronger construction, without weight increase, complete adaptability, complete standardization to add to the selling advantages of Moline Commercial and Truck Bodies along with the price advantages.

Nation-Wide Distribution Through 23 Moline Branches

You will readily recognize the greater convenience, the quicker delivery facilities for installation, afforded by the nation-wide distribution and stocking of Moline Bodies in the 23 Moline Branch Houses advantageously located. Many in the same city where there is a Ford Branch.

A Greater Dealers' Opportunity Now

The foregoing, with many other favorable features of Moline Commercial and Truck Bodies, bring a great dealers' opportunity squarely before you. Dealers desiring details of the Moline Body Department and its value, should

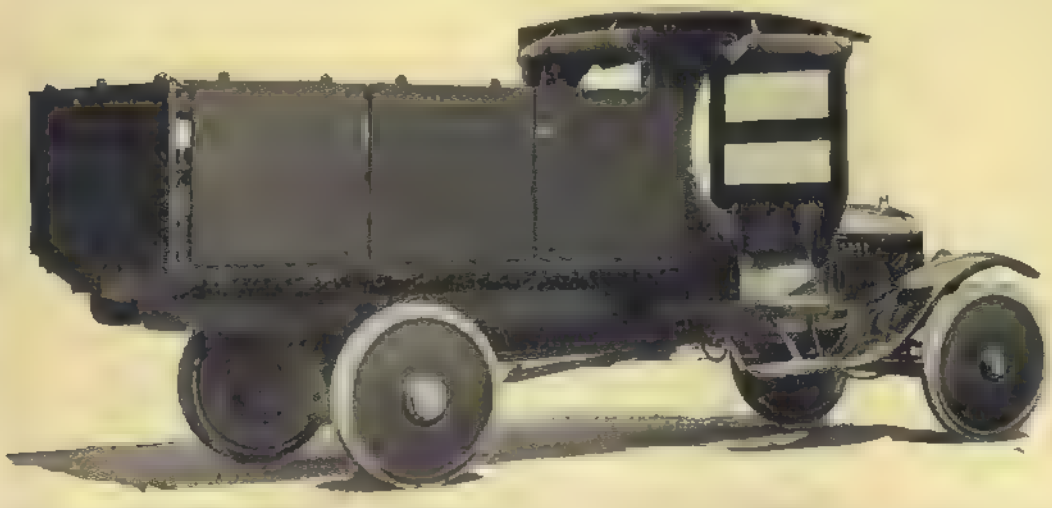
Cornfield Wheels

Pneumatic Results—and More—With Solid Tires



Not One Dollar for Repairs
in Six Months—Overloaded Every Day

This Ford One-Ton Truck, equipped with Cornfield Resilient Wheels, had been run 3000 miles up to December 15th, without a dollar of expense for repairs.

It frequently carries two tons, 4000 pounds, and has carried 5000 pounds. It is overloaded every day, yet shows no sign of damage to motor or chassis.

The tires are worn down just three-sixteenths of an inch from road abrasion, but show no damage from the excessive loads. That is because the Cornfield Resilient Wheels absorb the jar of travel.

Double Your Ford Truck Capacity
Equip It With Cornfield Resilient Wheels

Cornfield Resilient Wheels are now being made in large numbers for Ford trucks. The same Wheels can be used for like capacity trucks of other makes.

These Wheels so completely absorb the road shocks that your truck will have greater carrying capacity, the strain on axles is relieved, the motor is protected from vibration, the tires will be insured against the disintegrating pound on roadways.

Write for the Cornfield Booklet. It will interest engineers, dealers and truck users

The Standard Spark Plug of the World

The old, old story of AC dominance was retold at this year's New York and Chicago Automobile Shows. A census taken of the passenger cars and motor trucks on display showed that more fine cars were equipped with AC Spark Plugs than with all other makes combined. The dealer takes no chances in stocking a line that has the endorsement of the leading automotive engineers of the country, or in recommending and selling spark plugs that are used as standard equipment on the leading makes of automotive vehicles. That line is the AC. Concentrate upon it. Write today for complete dealer information.

Allen

A Worthy Companion of the Allen Touring Car

Resting on the same capable chassis of generous power

Those who know the quickness, the very unusual hill-climbing ability and the dogged persistence of the new Allen engine, will agree that it is ideal for a sedan

A sedan body considerably outweighs a touring body, for which reason a power plant of just passable performance on a touring model is seriously deficient when it must pull the closed car load.

The Allen Sedan gives exceptional service, because it is amply supplied with power by the Allen four cylinder engine, which won Allen instant recognition as one of 1920's really great automobiles of moderate size.

Also, you find in this sedan, as in the touring car, the same riding ease, due to extremely long springs and fine balance.

The body is tastefully appointed and staunchly built on an unusually substantial coach foundation. Hinges and door locks of rattle-proof construction—45 inch rear seat interior in dark gray velour 41 inch front seat in Spanish leather to harmonize platinum-toned nickel trimmings, mechanically operated window lifts, Perfection heater, rain-tight adjustable windshield with opaque storm or sun visor—these and many other niceties go to make the Allen Sedan a highly desirable vehicle

It is only fair to mention that production of this model is limited, and that the price, $2145, is lower than a car of its grade can be sold for later, if costs advance as now indicated.

any weight of car or truck. It is simply operated.

It is made in two models, one without the extension screw. Standard lowered is 10 in. high and it raises 6 in. It weighs 12 lb. No. 2, with the extension screw, is the same as No. 1, except the extension screw gives 5 in. additional rise. Weight is 14 lb.

McKinnon Exhibits Cellular Radiators for Fords

A new product was exhibited at the Grand Central Palace by the McKinnon Dash Co., Buffalo, N. Y. This is a honeycomb radiator for Ford cars, made of brass by the wrapped process. These radiators are carefully tinned inside and out. The tubes are

McKinnon Radiator

This is a genuine cellular core radiator of brass.

⅛ in. wide, straight downward with corrugated sides, agitating the water in its downward passage, thus carrying sediment with it. The radiator is constructed that there can be an outward strain many times before an actual burst takes place. Thus the danger of bursting from freezing is overcome. This radiator can be plugged up if a leak develops until there is opportunity to repair it. The radiator sells for $27 and $30, according to the size of the cells, which are made 5-16 in. square and 5-16 x ½ in.

Sunderman Jack for Passenger Cars and Trucks Introduced

The Sunderman Jaxall Hydraulic Jack for trucks and passenger cars was introduced at the Grand Central Palace of New York, by the Sunderman Corp., Newburgh, N. Y. This jack is principally for garages and shops. It automatically checks on the lifting stroke at any desired height. Oil is the liquid used in this jack. The up and down motions of the handle pumps oil from one cylinder into the other. To lower the jack, the release lever is pulled and the weight of the car carries it down to the ground. This

Sunderman Jaxall Hydraulic Jack

This jack was introduced at the Grand Central Palace. It is made in three sizes. Model 1 for passenger cars; Model 2 for three and five-ton trucks, and Model 3 for five and ten-ton trucks.

jack has no gears or ratchets. Brass and steel are used throughout the construction of this jack.

New Model Boyce Moto-Meter

The recent automobile show at New York City brought forth a new De Luxe Model Boyce Moto-Meter, made by the Moto-Meter Co., Inc., Long Island City, N. Y. This model is designed for high grade passenger cars and has a temperature tube that is ½-in. in diameter, having a broad column of red liquid readable at long distance. The case is silver plated and the finish is excellent. The size is 3⅜ x 5⅝ in. and the weight is 20 oz. The price is $15

NEW YORK SHOW

New Air-Operated Valve Spring Compressor Exhibited at the Grand Central Palace

At the exhibit of the Trexler Co., 1418 Walnut St., Philadelphia, in the Grand Central Palace, New York City, was a brand new tool for use in the garage. This tool is the Trex Air-Operated Valve Spring Compressor. It is a practical tool for taking the valve out or putting it in. The tool is connected with the compressed air system and applied to the engine and the valve turned on. This will compress the spring and the pin or key can be quickly removed or inserted.

The tool is made of steel and is light and strong and will compress heavy valve springs. It is stated to be universal, being adaptable to practically all types of engines. This tool allows the use of both hands after the spring is compressed. The net price is $15.

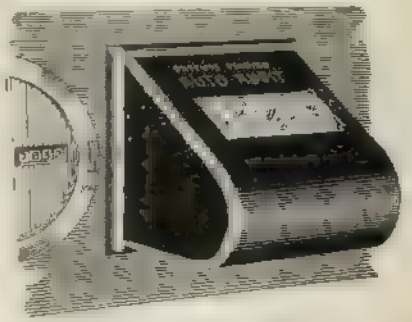
Fire-Gun Exhibited

The well-known fire extinguisher made by the Fire-Gun Mfg. Co., Inc., 115 Fourth Ave., New York City, has been improved in several details and a new model, 1 in. shorter than the standard, has been added to the line. Improvements are seen in the handle. This can be turned in either direction to unlock the gun for use. The nozzle stop has been improved, having a needle with a spring to retain it in a closed position. Brass has been replaced by copper at several points. The Fire-Gun is a double acting liquid pump that can be refilled as often as desired. It can be had with finish to match the car

New Device for Recording Expenses and Mileage

A new device to be mounted on the instrument board and to provide convenient means for keeping accurate records in mileage per gallon of fuel, the tires and any other items about the machine, is being produced and was on exhibit at the Grand Central Palace by the Wm. R. Johnston Mfg. Co., 359 E Ohio St., Chicago, Ill. This device, which sells at $2, serves as a constant reminder to the driver, due to its location, to jot down the many little items of expense and memoranda so valuable to those who desire to keep records of the expense of the car.

This device consists of a mechanically operated roll of tape upon which the various items are recorded. A knurled wheel draws the tape across the opening on the face of the instrument. Enough paper is



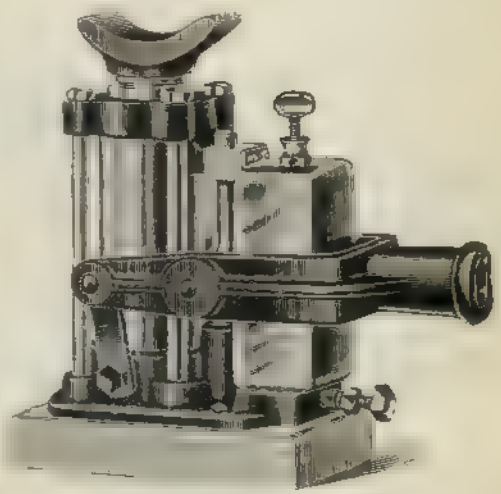
Johnson Auto Audit

This device provides means for a complete record of the mileage per gallon of gas, per quart of oil and the mileage per tire and any other item desirable to be kept a close record of

supplied for a season and it is easily replaced with a new roll. The mechanism is with in an attractive case.

Pratt Exhibits Hydraulic Auto Jack

At the Grand Central Palace was exhibited a new jack produced by Wm. E. Pratt Mfg. Co., State-Lake Bldg., Chicago, Ill. This new jack has a barrel made from steel tub-



Pratt Hydraulic Auto Jack

This jack is of capacity to handle any weight of car or truck.

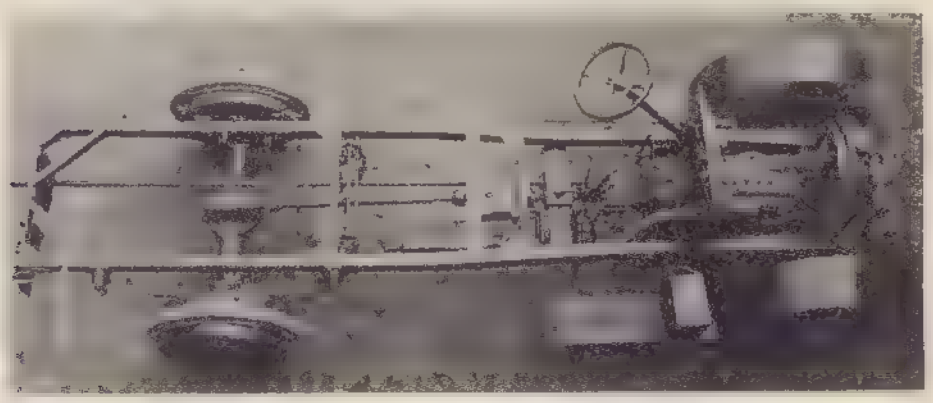
ing, a lifting bar of steel, and the balance being malleable iron. It is made in answer for a jack that will raise with little effort

Cotta transmission. The propeller shaft is of the mechanical joint type, having two joints which are inclosed in oil-tight pressed-steel tubing. A Lavine worm-and-nut type steering gear is used. The artillery wheels are equipped with tires of standard make. The equipment includes cab and cushion, front fenders, side and rear oil lamps, horn, tool box, complete tool kit and jack.

Model H Triumph Truck
An assembled job designed for the farmer especially, but adaptable for general hauling.

The Buffalo Tractor Truck

A NEW machine, broad in its scope of utility, has been announced by the Buffalo Truck & Tractor Corp., of Buffalo, N. Y. It is stated to be adaptable to many lines of business, such as road contractors, oil producers, farmers, etc., and has an exceptionally low gear ratio provided, which enables it to be geared down to the low speed of one mile in seven hours. A feature of this is that provision has been made to give the ordinary truck wheels traction in the fields Two extensions, 3-in. wide on each side of the rear wheels, but not quite so great in diameter as the rear wheels, that they will escape the surface of a paved road, are utilized. They are equipped with lugs which increase the traction of the truck to enable it to be driven into the field under load.



Bird's-Eye View of the One and a Half Ton Buffalo Tractor Truck

It is also useful as a portable power plant, the take-off power being obtained from a pulley, which is attached to the end of a shaft which in turn extends from the trans-

mission to and projecting beyond the rear of the chassis. This shaft is capable of developing 18 hp.

The capacity of the truck is 1½ tons and is electric lighted and started. It has a device for extra radiation when in use as a power plant. The power may be used when the truck is running or when idling. Locomotive power is obtained from a four-cylinder Lycoming Model K engine, having a 3½-in. bore and a 5-in. stroke and is of the L-head type. For truck purposes this truck can be made to run twenty miles an hour.

This truck may be obtained in any one of three types. The first type is a regular commercial chassis and lists at $1650; the second type, which includes the tractor wheel equipment, lists at $1750; and the third type, which consists of the portable power plant, tractor wheel equipment and chassis, lists at $2150.

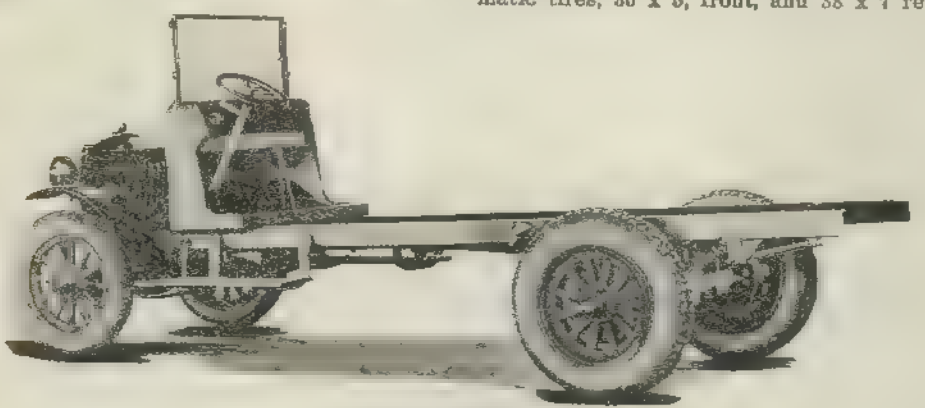
Duplex Delivery Truck

MEDIUM-CAPACITY speed truck demand has led the Duplex Truck Co., of Lansing, Mich., to produce the two-wheel driver model shown herewith. All parts of the truck designed for speed work. Pneumatic tires are standard equipment.

The power is supplied by a 4 x 5¼ in. engine having an S. A. E. rating of 25.6 hp. This engine will obtain and hold a speed of 25 m.p.h. with a full load at normal engine speed.

The radiator is special Duplex design with cast iron tanks and finned head. The water is circulated by a centrifugal water pump. Cooling is further assisted by an 18-in. fan, driven by a 2-in. leather belt.

The following is a resumé of additional specifications: Front axle, drop-forge, I-beam, 2⅝ in. deep; semi-elliptic front and rear springs; heavy artillery type wheels, having twelve 1¾-in. square spokes; pneumatic tires, 36 x 5, front, and 38 x 7 rear;



Duplex Two-Wheel Drive

A high-speed, medium-capacity truck for quick-delivery service.

The Duplex company contends that truck speed should be secured through engine power and not through a low gear ratio. This accounts for the adoption of an engine which, at first glance, appears to be too large for a truck of medium capacity. The power is transmitted through a five-plate, dry-disk multiple clutch to a transmission of selective sliding gear type. Final drive is through a David Brown type of worm gear with a 5.51 ratio. A Stromberg 1¼ in. carburetor is used and electric lighting and starting is provided by a Westinghouse outfit with a 157 am. hour battery.

wheelbase, 145 in.; price, $2575, f.o.b. Lansing, Mich.

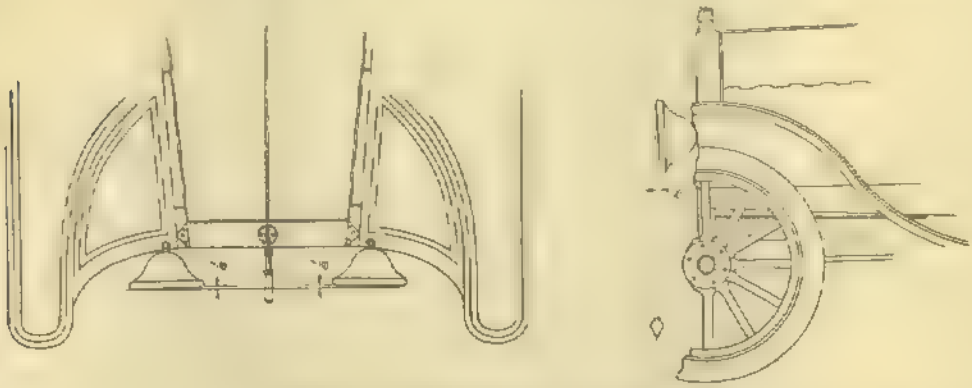
The equipment includes: Windshield, electric starting and lighting, ammeter, Boyce motometer, speedometer, electric horn, tools, jack, rim wrench, front fenders, grease gun and driver's seat.

National Rubber Corporation, Los Angeles, Cal., has been incorporated as distributor of Carmojon tubes on the Western coast.

satisfactory illumination. Proper reflecting equipment is essential. The parabolic type of reflector gathers the light from the lamp and assists in projecting it in nearly parallel rays.

The variation in voltage at which lamps operate is quite broad, regardless of whether connected directly to the magneto or taking current from the generator or from the storage battery. This variation is due in the first instance to the speed at which the motor is running and in the second case to whether or not the battery is completely charged or partly run down. It is accordingly necessary to use a lamp which will give sufficient light when the motor is running slowly or the battery partly discharged, and that will not burn out when the motor is running at a high speed or battery fully charged.

Mazda B (vacuum) lamps made in what is known as the G-12 bulb size have been adopted as standard equipment on the Model T Ford car. In order to destroy the last of the air which may remain in the bulb of the vacuum lamp to reduce the possibility of the bulb blackening, a substance called the "Getter" is introduced. This "Getter" acts upon the substance which tends to blacken the bulb, decomposing it so as to make it colorless. The filament in Mazda B lamps (see Fig. 3) is wound in the form of a double helix and at present is made of tungsten which is capable of withstanding the vibration both when cold and when heated. There is very little in the headlamps to get out of order except the bulbs and they do not require any attention unless they meet with an accident or burn out. In all such cases, replace the bulb.



Setting of Headlamps When Properly Aligned

The Chandler Carburetor for Ford Cars

A new, simply-constructed carburetor with few moving parts, is being manufactured by the Holland Brass Works, 616-20 Monroe St., Chicago, Ill. This carburetor has two simple adjustments and one moving part. It is stated to meter and govern the air to give the best firing mixture at all speeds.

This carburetor admits air at a point between the throttling butterfly valve and the firing chamber, the amount of air being determined by the position of the throttle and the speed of the engine. A by-pass provides means for easy cranking, gasoline from a small puddle being drawn through it to the engine. The gas spray jet in this carburetor is subject to the same vibration and suction as the spring air valve, shown at the right in the illustration. This combination is stated to give the engine a powerful firing mixture on acceleration. The makers claim for this carburetor speed, easy starting and a low throttling engine on the same adjustment.

The Chandler Carburetor for Ford Cars

A new carburetor with one moving part and two simple adjustments designed especially for the Ford car. The price is $18.

New Cars and Models

New Power Unit in the Daniels

THE Daniels Motor Car Co., Reading, Pa., well known manufacturers of the Daniels Eight cars, are using an improved power plant in its models. This new engine is "V" type, 3½-in. bore and 5¼-in. stroke.

The connecting-rods are mounted side by side on a common crank pin which, of course, necessitates slight staggering of the cylinders. The crankshaft is of massive design and of hollow construction to enable full pressure system to be employed, and runs in three bronze-backed babbitt-lined bearings. Crankshaft is made of chrome nickeled steel, finished all over in order to obtain perfect running balance. Main journals and crank pins are polished. The steel forged flywheel, machined all over, is bolted to a flange on the rear end of crankshaft; this, in turn, is machined all over to facilitate obtaining a perfect running balance. Camshaft, which is a steel forging, cams being integral, is mounted on three bearings of ample dimensions. The end thrust of the camshaft is confined to the center bearing; these bearings are supplied with oil, under pressure. The valves communicate direct with the cams through the conventional type of roller and tappet construction; these parts are positively lubricated. The lower half of the crankcase is the conventional barrel type, which serves as an oil sump. The camshaft is positively driven by helical cut gears. The oil pump is the conventional gear type pump mounted on the front end of the oil sump. The distributor and oil pump are driven off the camshaft by spiral gears.

Daniels Eight-Cylinder Seven-Passenger Victoria

One special feature of this engine is in the lubricating system. There are no tubes,

The New Daniels Power Plant

The latest Daniels car is powered by this improved eight cylinder 3 x 5¼-in. engine, as shown herewith

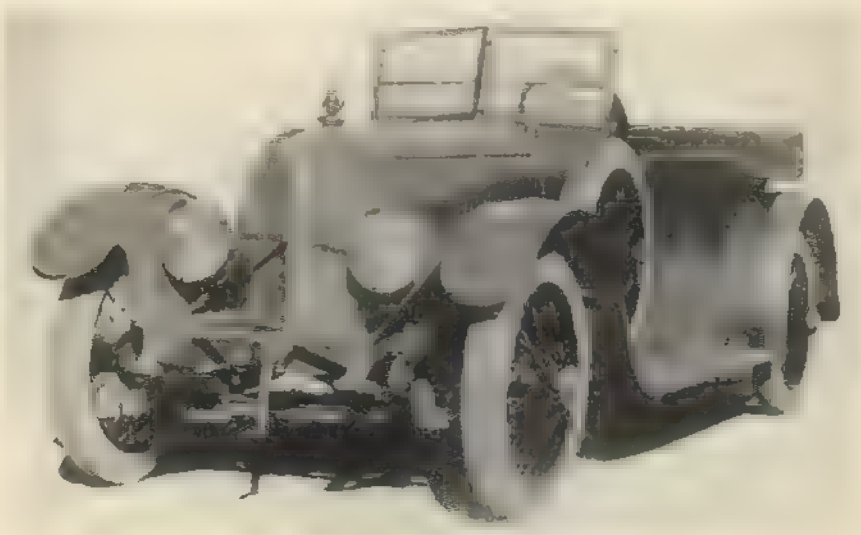
NEW CARS AND MODELS

or tube connections to break loose or blow out, when subjected to high oil pressure, as all of the tubes in the crankcase and oil sump are moulded in place when these units are cast, and these tubes are made to register from one unit to another; the necessary openings being provided for washing out and cleansing these lines when necessary

The generator and water pump are driven by a silent chain Ignition is furnished by Delco distributing unit. Starting and lighting furnished by Delco six-volt units. Carburetion is effected by Zenith Duplex carburetor through a water jacketed manifold into the cylinders, this water jacketed manifold also serves to carry the water from the cylinders to the radiator; in this construction the hottest water is over the gas intake manifold. The clutch is the conventional dry, multiple disc type, alternate plates being lined; compound leverage being employed. The transmission is conventional type, having three forward speeds and one reverse, all shafts being mounted on annular ball bearings of ample size. Change speed and emergency brake control are made an integral part of the transmission.

The wheelbase is 132 in., tread standard, tires 34 x 4½ in., cord, on Firestone demountable rims. The frame is pressed channel steel, narrowed at the front, and springs are semi-elliptic all around, underslung at the rear. Both axles are Timkens, the rear full-floating with spiral driving gears. The brakes are external and internal, 15½ x 2½ in.

Steering is from left side with levers in the center. The fenders of the Daniels car are pressed steel and follow closely the wheel contour. There are splash shields between the running boards and the body, and between the radiator and the frame. The gasoline tank of 20 gal. capacity, with a 3 gal. reserve, is given three point suspension at the rear end of the chassis. Gasoline is fed to the carburetor by a motor-driven pressure pump. A hand pump is installed on the cowl to establish the initial pressure. The bodies mounted upon the Daniels chassis are the five, six and seven passenger touring, four passenger close-coupled touring, three passenger roadster the limousine, suburban limousine, the brougham, the landau brougham, the landau let brougham, sedan, collapsible winter roadster. A solid mahogany top rail extends around the entire double cowl body of the five and seven passenger touring models. Windshield is frame, rain-vision type. A cowl ventilator is operated from the instrument board. The upholstery is long grained, hand buffed leather, with the cushions and backs very deep. Extra seats fold into the back of the front seats



New Meteor Car Being Produced in Philadelphia

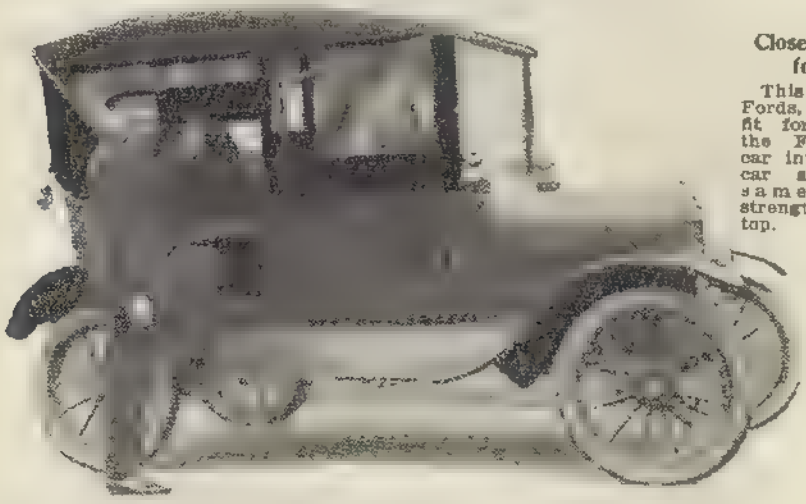
The accompanying illustration shows the four passenger Meteor car produced by the Meteor Motors Corp., 3607 Lancaster Ave., Philadelphia, Pa. A description of this car was given on pages 242 and 243 of the July, 1919, issue Attention is called to the V type radiator, head lamp and windshield and fenders as well Spare wheels are carried one on each side near the front as shown Wire wheels and shock absorbers are standard equipment This car is made in a four passenger model at $6000 and a two passenger model is about to be produced also.

NEW YORK SHOW

New Enclosure for Ford Cars

At the Grand Central Palace, New York City, was introduced the Close-Tite enclosure for Ford cars. This is an outfit made by the Longdin-Brugger Co., Inc., Fond du Lac, Wis. It is installed on the regular Ford touring car or roadster top and will allow the open car to be closed in to protect the passengers from inclement weather. The attachment adds but 37½ lb. weight. The curtains are 24 in. wide and made almost entirely of Pyraline to insure the most light possible in the interior. They are constructed on flexible steel frames to give rigidity and the curtains travel in pressed steel channels extending from the body of the car up to the center of the top. They operate the same as an ordinary roll top desk and can be raised or lowered without kinking. The outfit for the touring car sells at $48 and for the roadster $33

brilliant polish with a cloth or chamois. They are all metal, giving lightness, neatness and rigidity. They are made in round, oval, square and various shapes as desired. The 6-in. round models sell at $2 50; the 12 x 6 in. oval at $4 and the 20 x 8 in. oblong at $8.



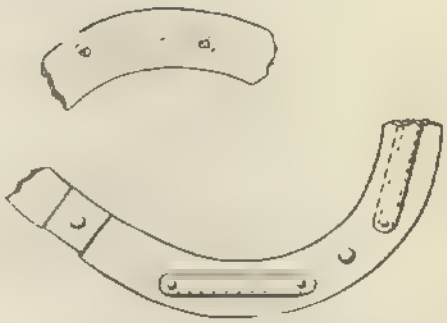
Close-Tite Tops for Fords

This top for Fords, a new outfit for converting the Ford touring car into a closed car and at the same time strengthening the top.

McAvoy Automobile Window Curtains

At the Grand Central Palace, the McAvoy Mfg. Co., 1303 S. Michigan Ave., Chicago, had on exhibition the McAvoy Automobile Curtain. These curtains showed a unique method of locking the fabric in the curtain. The accompanying drawing clearly shows this method. In one portion of the frame is a depression the shape of the piece which is placed over two studs in the other portion. This helps to retain the top fabric firmly and is used in all the large-sized window curtains.

These window curtains are made so that they will not rust or tarnish. They are die-cast aluminum and are readily brought to a



Feature of the McAvoy Automobile Window Curtain

This illustration shows the new locking device used in the McAvoy window curtains.

Luthy Storage Battery Exhibited

The Luthy Storage Battery, made by the Luthy Storage Battery Co., Newark, N. J., was on exhibition at the Grand Central Palace, New York City. The battery has been improved over previous models in that there is a new celluloid separator, which is claimed to make the battery more efficient.

Do You Use Buyers' Index, Page 624

CONDENSED REVIEW OF TRADE NEWS

Ireland Seeks American Cars

NEW YORK CITY, Jan. 20.—The Irish Trade Commission to America, Suite 204, 280 Broadway, requests that all American automobile manufacturers forward to them their names and the products that they manufacture in order that the work of promoting a closer trade relationship between this country and Ireland might be facilitated. It states that at present there is a very great opportunity for American manufacturers of automobiles to supply the demand that exists in Ireland at this time, and especially so since there is a popular sentiment afloat in Ireland which is strongly in favor of direct trade with America. This had been made possible by the operation of a line of steamers between America and Ireland

Washington Association Banquets

WASHINGTON, D. C., Jan. 21.—About 100 members were present at the annual banquet of the Washington Automotive Trade Association which was held at the New Willard Hotel on Jan. 19. At the regular business meeting which followed the banquet the following officers were elected: Rudolph Jose, president; C. Royce Hough, vice-president; C. H. Warrington, secretary, and E. J. Quinn, treasurer.

The principal address was delivered by A. G. Bachelder, chairman of the executive board of the American Automobile Association. Pyke Johnston, secretary of the National Automobile Chamber of Commerce, spoke upon the necessity of co-operation between the motor car dealer and the manufacturer. An address was also delivered by Wm. Pullman, editor of the American Motorist.

Friend Motors Corporation Announced

PONTIAC, MICH., Jan. 21.—Otis C Friend, together with associates, has purchased the plant of the Olympian Motors and will continue the manufacture of Olympian models pending the completion of the plans for a new car which will embody Mr. Friend's ideas. The new company will be known as the Friend Motors Corp. Aside from his duties as president of the company, Mr. Friend will personally supervise the manufactures of the company. He will be remembered as a former executive of the General Motors Co., which position he resigned in order to devote all his time to the new enterprise.

The Hartford Show

HARTFORD, CONN., Jan. 28.—At the thirteenth annual automobile show of the Hartford Automobile Dealers' Association, held during the week of Jan. 17th, twenty-nine members of the dealers' association displayed cars and trucks. Two makes of tractors were shown.

The individual exhibits were the best ever made by local dealers. The seventeen different makes of trucks on exhibit were arranged along the side spaces and occupied all the available room.

Local distributors of the Paige, Scripps Booth and Locomobile were unable to secure space owing to their not having been in business long enough and held individual displays in their own salesrooms.

Seventeen other dealers were ruled out of the show because they had not been in business two years. These formed the Automobile Trades Association of Hartford and staged a show one week in advance of the annual one.

From the standpoint of sales all the shows have been a huge success.

Sells Car Maintenance

HARTFORD, CONN., Jan. 21.—One progressive dealer in Hartford has met with marked success in the sale of maintenance service on a yearly basis. He called on various dealers in the locality who did not have time to wash their cars and sell them too and secured their washing business. Then he obtained contracts to wash, oil and grease cars of private owners on a yearly basis.

He has installed a washing system whereby he can wash a car in 11 minutes. His business has grown to such an extent that two washers are kept busy from morning till night and he has been obliged to put men on for night work.

Scotland to Have Show

Glasgow was the scene of the Scottish Automobile Exhibition which was held from January 23 to 31. Both passenger and commercial cars were exhibited as well as a number of new comers which were seen for the first time.

Many firms handling used cars rebuild them before offering them for sale. Then they know what's in 'em. An article in the AUTOMOBILE TRADE JOURNAL for March gives some good pointers on this subject.

COMMERCIAL MOTOR CAR DEPARTMENT

This department also includes trailers, road tractors, and truck-forming units that are not especially for Fords, these being in the Ford Section.

The 1920 Gramm-Bernstein Line

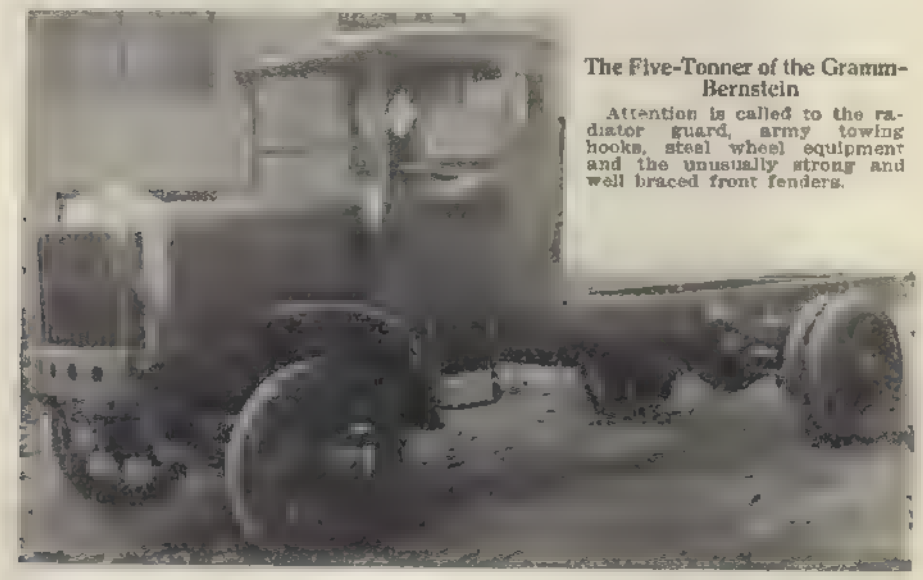
SIX models will comprise the line of trucks to be turned out by the Gramm-Bernstein Motor Truck Co., of Lima, Ohio, for the coming season. The models resemble to a degree the Class B Liberty Truck, and are as follows: 1½-ton internal gear, and worm drive models in the following capacities: 1½, 2, 2½, 3½ and 5 ton

The 1½-ton internal gear truck, known as Model 15, is powered by a Continental "N" engine and uses a conventional type transmission with a Clark axle. It is equipped with 36 x 3½-in. solid tires in the front and 36 x 5-in. single solids in the rear and an electric generator, battery lights and horn, tools and driver's seat is included in the chassis price, which is $1975. The frame is the standard Gramm-Bernstein type. The brakes operate on the rear wheels and are equalized. The two-piece driving shaft which is supported in the center is connected by three flexible disk universal joints of the company's two-bolt type.

A wooden body-sill, which is clasped on the frame with wrought iron clamps, provides a means of clamping the body upon the sills, thus eliminating the necessity of drilling holes in the frame.

The entire line of the company's worm driven trucks are very similar in appearance, varying only in size. The 2½-, 3½- and 5-ton capacities are driven by Liberty truck type engines. Steel wheels are regular equipment on these models. The 1½- and 2-ton models are equipped with the latest type Continental motors.

Perhaps the most important features of the Gramm-Bernstein worm drive line is the fact that they are regularly equipped



The Five-Tonner of the Gramm-Bernstein

Attention is called to the radiator guard, army towing hooks, steel wheel equipment and the unusually strong and well braced front fenders.

with a standard cab with doors and storm curtains that open with the door, ventilating windshield, motometer, radiator guard, radiator shutters and shroud, army towing hooks, hubodometer, metal license brackets front and rear, spring trailer drawbar supported in frame by extra A member, electric generator, storage battery, lights and horn.

The transmission used throughout the line of worm drive trucks is of Gramm-Bernstein design. Shifting of gears is eliminated by a dry disk individual type of clutch. The gears and clutches are assembled on a six-splined shaft by an exclusive process which does away with the use of bolts and set screws. The transmission has a filler spout extending beyond the frame to facilitate renewing the oil.

On the 1½- and 2-ton models the gasoline tank is mounted on the dash to insure a strong gravity feed, while in the three larger models the thirty-gal. tanks are mounted under the seat with a Stewart heavy-duty truck type vacuum system.

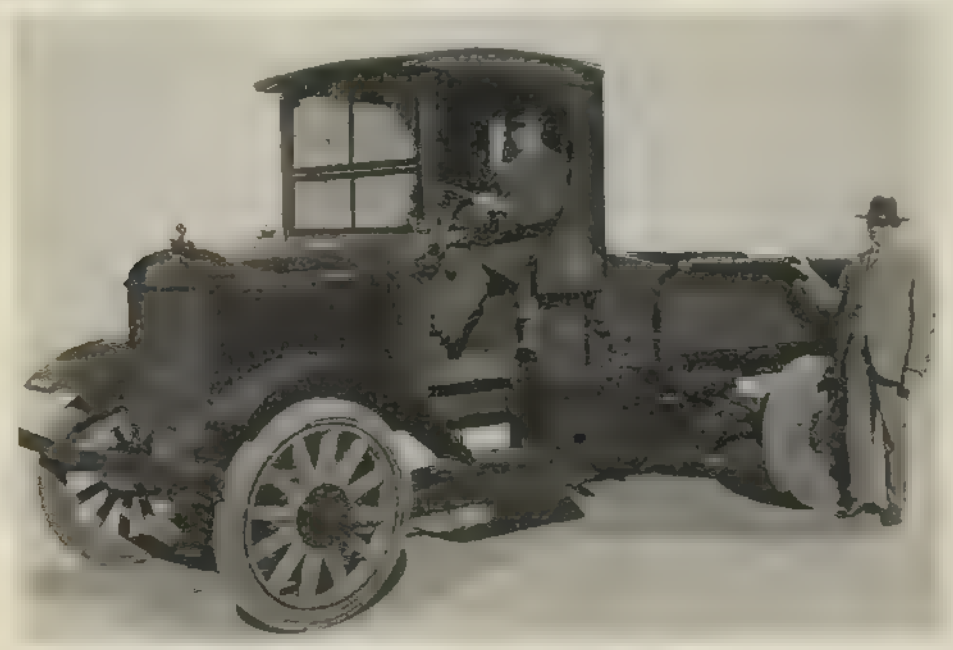
Two Models of Dependable Line

TRUCKS in two capacities are being manufactured by the Dependable Truck & Tractor Co., of Galesburg, Ill., 1½- and 2½-tonners. An unusual feature of these trucks is a device called the Viscometer, which cools the oil of the lubricating system of the engine. The radiator mounting on springs is another feature. This is said to overcome any synchronized vibration that may come about through the main springs.

Both models have vacuum fuel feed system and Buda engines.

The power of the engine is transmitted through a multiple dry disk clutch and Fuller transmission. Then through a tubular propeller shaft with Acme oil-tight universal joints that require attention only every three or six months. It is claimed that this is the only joint that uses nothing but oil for lubrication. Final drive is through a Wisconsin worm drive axle

The hot oil is drawn directly from the crankcase by a gear non-priming pump to the Viscometer, which in addition to other parts consists of approximately 6 ft. of spiral tubing. After being cooled the oil passes to the bearings, at the same time keeping them cool. This device is claimed to restore the viscosity of the oil.



One of the Trucks of the Dependable Line

The trucks of the Dependable line use a Buda engine in both the 1½ and 2½-ton jobs. The engines used are 3¾ x 5½ in. and 4¼ x 5½ in. respectively.

NEW EQUIPMENT, PARTS AND SUPPLIES

New Milwaukee Pump

The Milwaukee Tank Works, Inc., Milwaukee, Wis., has just placed on the market the Type 36, Five-Gallon Rapidelivery Speed Pump for handling gasoline. This new pump, which is illustrated herewith, provides an efficient means for the hand operated method of filling the motor car gas tank. The maker states that 15 gal. per minute can be obtained without any special effort. The pump is well finished in a hard-baked enamel with nickel trimmings. There are adjustable measuring stops to allow the operator to accurately draw one, two, three, four or five gallons at a single stroke. Slightly over 12 turns of the crank delivers 5 gal. of gasoline and to return the plunger, but two revolutions of the crank, in the same direction, are necessary. The handle is always turned forward, never backward. A meter is part of the equipment and records each gallon pumped. This pump has a filter to remove any water or dirt from the gasoline and when not in use the cover, which is counterbalanced, is raised and locked with the hose nozzle inside.

Type 36 Milwaukee Five-Gallon Pump

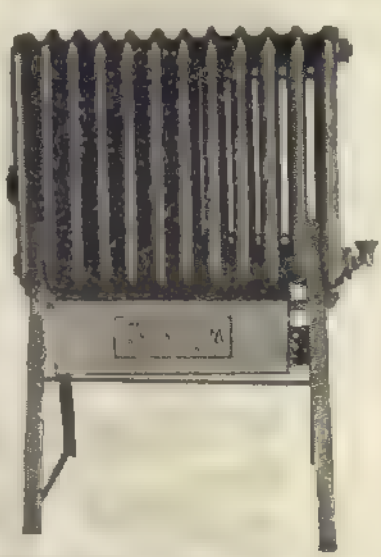
The standard equipment includes the meter, filter, 10 ft. of 1¼-in. metal hose, portable filling nozzle and an electrically illuminated sign. The price of the pump with 250-gal. tank is $397.

This Type 36 pump can be furnished with a motor drive to eliminate the manual labor, at $198 extra. The motor is ¼-hp. and utilizes 110 volt A. C. or D. C. current.

You need all your fingers to button your collar and fix your tie. Play safe.—National Safety Council.

A Steam Garage Heater

A new heater for the small garage which will avoid the excessive cost of installing a heating system and maintaining a coal burning system, is being manufactured by the Masdon Mfg. Co., 30 State St., Cambridge, Mass. It will burn either gas or kerosene without odor. The outfit consists of a radiator on cast iron standards, supporting a sealed iron box, protected by two layers of perforated brass screen, spaced one inch apart. The box contains a boiler with suitable conduits and an approved gas or a wickless blue flame kerosene burner and an ignition device. This eliminates the use of matches, a source of danger. The heater is made of cast iron, constructed along the famous Davy's Miners lamp principle to give protection against fumes.



Masdon-System Garage Steam Heater
This is a steam heater operated by oil or gas and protected from fumes.

Combination Press and Vise

The Motor Machine Corp., Reliance Bldg., Kansas City, Mo., is marketing a Combination Press and Vise illustrated herewith. This device is composed mainly of two parallel iron rods, with both ends of the rods threaded to receive the two head ends, the upper and lower, which are secured on the rods by nuts. The head is provided with an opening wherein is cut square threads to receive and accommodate a drive arm which is provided with a square thread and operates against the shaft. The device sets

GREYHOUND
TIRES AND TUBES
TERRITORY OPEN
FOR LIVE DEALERS
THE IDEAL TIRE & RUBBER CO.
GENERAL OFFICES & FACTORY
CLEVELAND
On the trail of a Good Tire

The brakes are 18 in. in diameter, 2½ in. wide. The front springs are 39 x 2½ in. and have 10 leaves. The rear are 52 x 3 in. and have 16 leaves. The wheels are wood, the front having fourteen 2-in. spokes and the rear fourteen 2½-in. spokes. Solid tires are standard equipment, the front being 36 x 4 single and rear 36 x 4 dual. Option is given of 36 x 8 solid in place of the duals at slight additional cost. Pneumatics extra.

Radius Rods Have Ball Ends

The driving torque is taken by heavy radius rods of the I-beam cross section type, and the rear ends of rods are attached to rear axle by 1¼ in. hardened and ground steel pins, which pass through phosphor bronze bushings 2¾ in. long. The front end of rods are secured to the frame brackets by 2¾ in. hardened and ground steel balls, permitting the rods to move freely in any direction. Torque reaction is taken by the rear springs.

The frame is 6½ in. deep, has a 3½ in. flange and is of ¼ in. stock. The rear end of the frame is firmly braced with gusset plates and pressed steel channel diagonal braces prevent the frame from getting out of square. The wheelbase is 154 in. and the turning radius 24½ ft. The distance back of cab to end of frame is 11 ft. The list price is $3400.

Oshkosh Four-Wheel Drive Two-Ton Truck

THE Oshkosh two-ton four-wheel drive model being turned out by the Oshkosh Motor Truck Co., of Oshkosh, Wis., is a general service truck built to withstand hard going and rough usage. It is so designed that the various working parts are accessible. It is powered by a Herschell-Spillman 3½ x 5-in. engine.

Side View of the Oshkosh Truck

A two tonner using 36 x 6-in. cord tires on both front and rear wheels, and powered by a Herschel-Spillman engine

The 4-cylinder Herschell-Spillman engine is 3½ x 5 in.. A Duplex governor controls the road speed to 22 m.p.h. From the engine the power is carried to the Brown-Lipe main transmission through a multiple-disk dry-plate clutch. The sub-transmission, which is of this company's design, includes a driving sprocket and an endless silent chain over a large chain sprocket containing a differential of the automatic locking type. The transmission has four forward speeds and one reverse, giving the first gear reduction in the main transmission. From the main transmission the power is carried through a short propeller shaft equipped with two universal joints, Merchant & Evans make, into the center or sub-transmission midway between the front and rear axle. From here the power is transmitted through propeller shafts of equal length to the front and rear axles. The automatic differential lock, which is also provided, immediately transfers the full driving power of the engine to the wheel, which maintains traction.

Final drive is through front and rear axles of this concern's make. In general construction they are of the conventional full floating type, the power being trans-

mitted through propeller shafts to the axles through bevel gears of conventional construction.

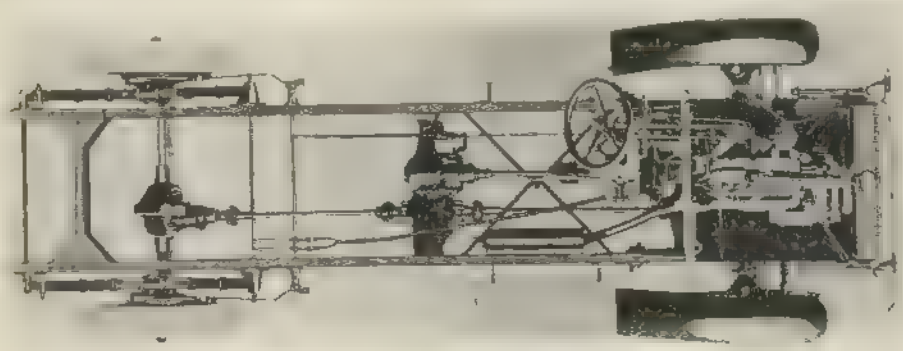
The propeller shafts and differentials are interchangeable. The gasoline is fed by the Stewart-Warner vacuum feed system to the Zenith carburetor which is provided with a hot-air intake. The ignition, engine starting and electric lighting system used is the North East electric equipment. A Willard heavy-duty storage battery is also provided. Magneto ignition system is optional.

Cooling is by a thermo-syphon system through a cast fin head radiator with Spirex core of ample cooling capacity. The cooling system is assisted by a belt-driven fan 18 in. in diameter with slack take-up.

The frame is of A. O. Smith make, pressed steel 5 in. deep and strongly reinforced with cross members. It is designed to give flexibility to permit unusual twisting without interfering with other units.

Steering is through a Ross irreversible steering gear, located on the left side and has an adjustable corrugated wheel 18 in. in diam. The spark and throttle controls are located under the steering gear. A foot accelerator is standard equipment. The service brake is of the external contracting type working on a brake drum located on the front of the sub-transmission on drive shaft, braking through sub-transmission on all four wheels with equal resistance. The brake drum is 8½ in. diam. with a 3½-in. face. The emergency brakes are of the external contracting type on the rear wheels, the brake bands being lined with high-grade brake lining. All brakes are of Oshkosh make.

The springs are guaranteed against any breakage and are of Tuthill-Titanic make.



Plan View of the Oshkosh Truck

Hotchkiss drive is used both front and rear, which is stated to give greater flexibility.

The front springs are 44 in. long, 2½ in. wide, rear 50 in. long, 2½ in. wide. The wheels are of the artillery type and contain fourteen 2-in. hickory spokes.

Standard equipment includes: Demountable rims, one extra, enclosed all-weather cab, starting and lighting system, electric button, ammeter, bumper, Detroit engine-driven air pump, heavy-duty truck jack and a complete set of tools.

The price of Model A is $3500 and Model AA $3600, f.o.b. Oshkosh, Wis.

Triumph One and a Half Tonner

MODEL H Triumph Truck is a model just announced by the Triumph Truck and Tractor Co., of Kansas City, Mo. The wheelbase is 144 in. and the capacity is 1½ tons. It is for general transportation and well adapted for the farmer. It has a military type radiator, Russell axle and Buda engine. Tread is standard, and the weight is 3500 lb.

This truck is essentially an assembled job and includes a Buda engine, model CTU, 3¾ x 5½ in. The speed is controlled to 18 m.p.h. by a Pierce Governor. The water is circulated through the cooling system by a centrifugal pump.

Lubrication is by a full force pressure feed system to all crank and camshaft bearings through drilled crankshaft.

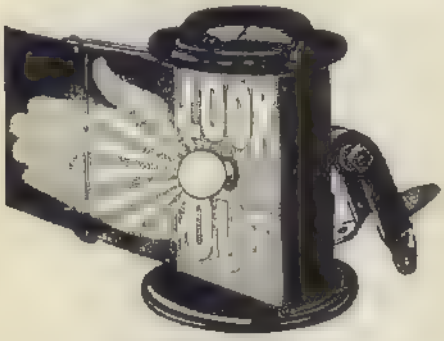
The Bennett float feed carburetor is fed by a vacuum system that draws from a 30-gal. gasoline tank located under the seat. Ignition is by a Dixie high-tension magneto with automatic impulse starter.

Power is transmitted through a Borg & Beck dry-plate heavy-duty clutch, inclosed in a special housing, to a selective type

NEW YORK SHOW

Turn-O-Stop Indicator Exhibited at the Show

A new warning signal, which has two units, each of which attaches to a rear fender and which are operated electrically from the steering column and throws outward a red hand, lights, and also operates a loud buzzer, was exhibited at the 69th Regiment Armory by the Un-X-Ld Products Corp., 76 Front St., New York City. The outfit complete sells at $25



Turn-O-Stop Indikator

One each of these indicators is attached to each rear fender. This illustration shows the hand open and the light turned on

The driver can flash out the red hand on either side, the hand pointing to the right on the right fender and to the left on the left fender, or both can be flashed, indicating "stop." This signal, although quite inconspicuous, attracts the attention of the driver in the rear by its loud buzzing and also by the swinging out of the red hand and the flashing of the red light. This signal does away with the necessity of swinging one's hand out the side of the car and taking it far from the controls or wheel where it should be. This indicator can be attached to any car. The case of the signal is of steel and the bracket is stamped steel A specially constructed magnet operates the swinging of the door outward. The external parts subject to rust nickeled, the finish of the lamp being baked black enamel.

The switch on the steering column is a ball switch, having four contacts and a neutral. This device can also be used as a rear headlight in backing about in the dark and as an emergency horn, also as a tail light in case of necessity.

You want your business to grow, don't you? "Building a Million Dollar Business," in the Merchandising Number next month, tells how one business was developed to big proportions.

Two New Fracto Specialties Exhibited

The Fracto Specialty Co., Inc., 161 Massachusetts Ave., Boston, Mass., exhibited at the 69th Regiment Armory two new specialties.. These are the Fracto Steering Wheel Grip and the Number Plate Holder, illustrated herewith. The first of these is a band of ribbed rubber that gives a good grip on the steering wheel. It will also help absorb the road shock. It is easily installed; is packed 12 in an attractive display box and sells at 50 cents per pair.

The Number Plate Holder is as well a brace for the front headlight. It consists, as the accompanying illustration shows, of a cross piece bolted to two ring members which clamp on the headlight doors of the

Fracto Steering-Wheel Grips

This device fits all wheels and is a band of soft ribbed rubber to give a good grip.

Fracto Number Plate Holder

This not only holds the license plate at the front of the Ford car, but braces the headlight one to another.

Ford car. This keeps the lamps straight, holds the number plate in the correct position and prevents undue vibration of the lamps. It has black enamel finish and sells at $1.50.

Jobbers! The Merchandising Number next month is for your benefit. It will contain articles on merchandising from YOUR standpoint—a perpetual inventory system—a jobber's sales contest which netted big results—the necessity of moving dead stock—collecting the small bills. Also several special articles on building up the dealer's business, with suggestions which YOU can use in helping YOUR dealers to make more money—for themselves and incidentally for you.

A New DAYLO Assortment of best selling styles

No. 1760

To help make "Double DAYLO Sales for 1920"

HERE is a brand new Daylo Assortment made up to help every Daylo Dealer put over his sales for a hundred per cent increase in 1920.

It contains 47 lights taken from the 12 best selling tubular styles. There is not a slow mover among them. It is an honest-to-goodness quick-turnover unit.

To get down to brass tacks, here are the prices:

List Price of Assortment 1760..	$76.55
Net Price to Dealers....	41 34
Profit on one turnover	$35 21

When the big 1920 campaign for Daylo is under way every live dealer can sell at least one of these units each month.

Join the 1920 Eveready Team-Workers and ride along to bigger Daylo business than ever before. Send now for circular of Assortment No. 1760 and the fine portfolio of Daylo plans, entitled, "Double Daylo Sales for 1920."

Coming soon: Another great Eveready Contest $10,000 in Cash Prizes. Details to be announced later.

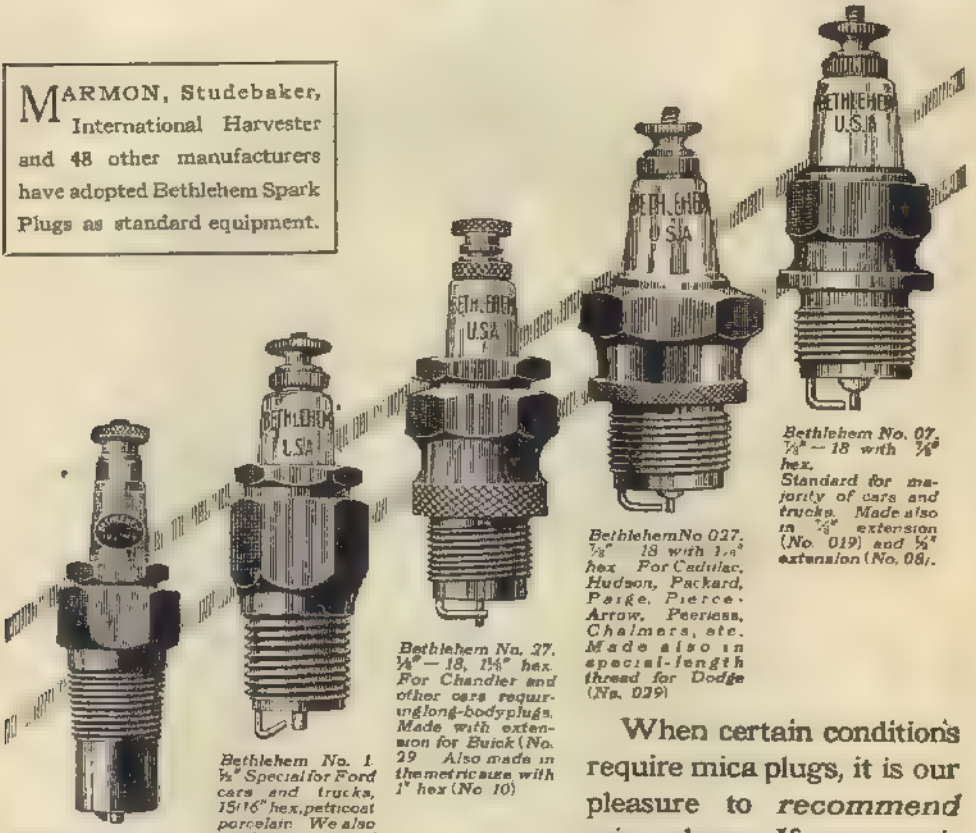
The Right Plug for Every Purpose

MARMON, Studebaker, International Harvester and 48 other manufacturers have adopted Bethlehem Spark Plugs as standard equipment.



Bethlehem No. 92. ¾" long de Luxe Mica Tractor Plug, standard equipment International Harvester Co., also some types Hart-Parr and Case Tractors. Also made in ¾" size (No. 91) ⅞" 18 (No. 94), also ⅞" long (No. 95) Also mica plugs for cars, trucks and motorcycles.

Bethlehem No. 1. ⅞" Special for Ford cars and trucks, 15/16" hex, petticoat porcelain. We also make a special Fordson Tractor Plug (No. 12).

Bethlehem No. 27. ⅞" — 18, 1⅛" hex. For Chandler and other cars requiring long-body plugs. Made with extension for Buick (No. 29. Also made in the metric size with 1" hex (No. 10)

Bethlehem No. 027. ⅞" — 18 with 1⅛" hex. For Cadillac, Hudson, Packard, Paige, Pierce-Arrow, Peerless, Chalmers, etc. Made also in special-length thread for Dodge (No. 029)

Bethlehem No. 07. ⅞" — 18 with ¾" hex. Standard for majority of cars and trucks. Made also in ½" extension (No. 019) and ½" extension (No. 08).

When certain conditions require mica plugs, it is our pleasure to *recommend* mica plugs. If our experience and judgment dictate the need for porcelain plugs, we are equally glad to recommend *porcelain*. In other words, we are not bound to either type of plug, but sell you the type best suited to your requirements. Confer with us freely, without obligation.

BRISCOE

A Wonder Car!

The Verdict of Thousands Who Saw It at the New York Show

From both a mechanical and artistic standpoint the 1920 Briscoe has scored a distinct hit.

The clean-cut chassis, giving one the impression of a sturdy athlete stripped for action; the compact unit power-plant, emphasizing the features that have made Briscoe economy world-famous; the beautiful, distinctive body lines, worthy of the highest-priced car built—these and a score of other features demonstrated Briscoe dominance in the light car field.

See the three models—sedan, coupe and touring car. They are worth your careful study.

THE Detroit ELECTRIC

The Car Desired

To every one, we think, the fine electric is the desired car.

Perhaps it is because in grace of line, beauty of finish, and artistry of interior fittings the electric is unequalled.

Perhaps it is the superior cleanliness, ease of operation and safety of the electric.

Or perhaps it is that while some type of gas car is within reach of everybody, the fine electric is essentially the car of the discriminating minority.

This year's Detroit Electric is the supreme achievement of years of dominance. Every lover of a fine car should see it.

Detroit Electric Car Company

DETROIT MICHIGAN

The electric was the pioneer enclosed car—and it is still the best

SOSCo

Oil Cushion Tappet

Silent valves! What a relief to the driver of a car with overhead valves The end of the constant clicking and clacking and loose rattling that proved so annoying and monotonous. And all so easily accomplished.

YOU can earn big profits by doing this for your customers who drive Buicks, Oaklands, Chevrolets, Oldsmobiles and others, because people will gladly pay highly for comfort.

All you need to do is to lighten and place all parts in close contact (the rattling is caused by the wear on the parts set loose to permit of motor expansion) with the rocker arm tight on the top of the Oil Cushion Tappet. The spring at the top of the tappet relieves the pressure with its flexibility and the sound of the blow of the rocker arm on the tappet is *deadened by the cushion of oil* which is under this spring.

Send for our display cabinet which calls your customers' attention to the Oil Cushion Tappets either by window or counter display.

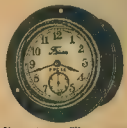
AUTOMOBILE CLOCKS

The secret of the accuracy and durability of a keyless auto clock is the infinite exactness with which it is made. Micrometers that are the extreme of precision quickly detect the most minute variation in size. Each part is carefully tested. The plates, pinions, wheels—every part of the movement is solidly put together. Then comes a rigorous testing of the complete clock. When a clock has passed through the testing and inspection department, we guarantee that you will find it more than an "automobile clock" a scientific, accurate timepiece that is a mark of the distinctively up to the minute completely equipped automobile

FRISCO
THIRTY HOUR. STEM WIND. COWL TYPE



Has concealed winding stem. The movement and its case can be removed from the outer case when necessary to wind it. The outer case is attached to the instrument board by three nickel plated screws. The movement is an accurate thirty hour type strongly and firmly assembled, especially for automobile use. Finished in black and nickel. 2¾-inch white dial with black numerals.

Frisco No. 2 ..... **Each $5.50**

DENVER
EIGHT DAY. KEY WIND. COWL TYPE

A high grade lever type movement accurately regulated makes the Denver model an ideal auto clock. A white celluloid dial 2¼ inches wide is used in place of the silver dial usually found on auto clocks. Finished in black and nickel.

Denver ..... **Each $8.25**

MODEL 12
EIGHT DAY. RIM WIND AND SET. COWL TYPE

Just the proper size to install right in front of the wheel. The dial is only 2¼ inches in diameter, but is easily seen from the rear seat.

No. 12A—Black and nickel, with silver dial.

Each **$14.00**

No. 12B—All nickel, with black dial, luminous numerals and hands.

Each **$16.25**

MODEL 9

Equipped with a fine quick beat, accurate eight day movement that will resist any shock or strain and yet keep accurate time. Dial 2¾ inches in diameter.

No. 9—Black and nickel, silver dial. ..... **Each $15.50**

No. 9C—Black and nickel, with black dial, luminous numerals and hands ..... **Each $17.50**

POPOUT

Absolutely flush with instrument board. Will spring out just far enough to be easily wound and set. After you have wound or set it, press firmly against the face of the clock and when it has been pushed back flush with the instrument board a slight turn in a counter clockwise direction will lock the clock securely in place. Finished in black and nickel. Dial 2¾ inches. Black dial, luminous numerals and hands.

Popout ..... **Each $19.00**

AEROPLANE

A clock of this type and design was selected by the United States navy for use on hydroplanes during the war. It had to stand every kind of strain and shock—and it had to be waterproof. It is essentially an aeroplane clock, but it has proven exceptionally well adapted to automobiles. The case is black enamel with a nickel winding rim. The dial is black with luminous numerals and hands. You can tell the time easily and accurately in the dark.

Aeroplane ..... **Each $17.00**

The Waltham Automobile Clock

More Than a Quarter-Million Now in Use as Standard Equipment

Premier Model 6-D, 7 Passenger Enclosed Car Equipped With Waltham Automobile Clock

Model B-2

Because they are artistically cased to harmonize with the other luxurious fittings of the high-class enclosed car, and so marvelously constructed that neither rough roads nor sudden changes of temperature affect their precision, Waltham Automobile Clocks have been chosen as standard equipment for the splendid cars listed on this page.

Each clock has a jeweled eight-day movement with two main springs, and a winding indicator which flashes its red signal on the dial every seventh day as a reminder that the clock needs winding.

In case the car you select does not carry a Waltham Automobile Clock as part of its equipment, it will pay you to have one installed, because a Waltham will tell you the right time all the time.

List of Cars Carrying Waltham Automobile Clocks as Standard Equipment:

Apperson	Hollier	Owen-Magnetic

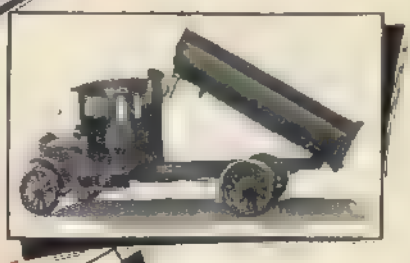
WALTHAM WATCH COMPANY, WALTHAM, MASS.

WALTHAM

THE WORLD'S WATCH OVER TIME

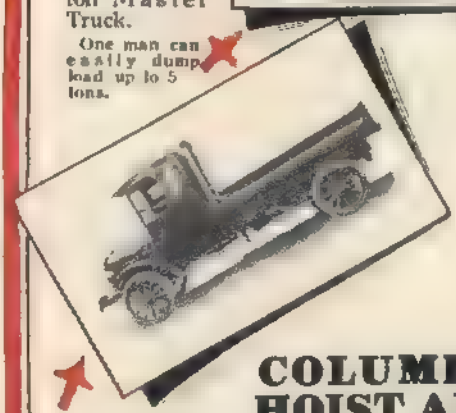
Showing Columbian Lightning Hoist and Dump Body mounted on Troy Trailer.

Note compactness and neat lines. Such a Columbian Combination will add efficiency to any fleet owner operating trailers.



Showing Columbian Lightning Hoist and all-metal Dump Body mounted on 3-ton Master Truck.

One man can easily dump load up to 5 tons.



Patents Pending

COLUMBIAN LIGHTNING HOIST AND DUMP BODIES

Showing Columbian Lightning Hoist and all-metal Dump Body mounted on Oneida Truck.

Note the little space the Hoist occupies between the Dump Body and back of driver's seat.

Will add efficiency to any firm using trucks, as it will aid them in unloading their loads quickly, thus saving both time and labor.

This Hoist fits any chassis, and occupies but 8¼ inches back of the driver's seat. One man can handle, with ease, loads of from one to five tons. This Hoist will elevate the body to an angle of from 30 to 50 degrees in *less than two minutes*

You don't have to smear this Hoist with oil or grease to make it operate, nor waste time in making repairs, as it is absolutely fool-proof. It is equal in every respect to a Power Hoist *minus the expensive upkeep.*

COLUMBIAN METAL BODIES are constructed of all-metal throughout, and they are built for service and durability. Columbian Metal Bodies are riveted only where acetylene welding is impossible. The result is a smooth interior body, loadtight, strong, durable and built to last a lifetime. Dealers never have had a better opportunity to make money on Dump Bodies and Hoists as today, and you can lay your foundation for a growing business by confining your efforts to COLUMBIAN EQUIPMENT.

Columbia Six

It "Wears Well"

Like a Good Friend, You Value Your Columbia Six More the Longer and the More Intimately You Know It

After months and months of driving, when sun and rain have had their chance to injure your car's finish—you will still admire the beauty and flawless finish of Columbia Six coach work and design.

After thousands of miles of town and country driving, you will still find the same original *willingness* in the Columbia Six—the smooth, quick acceleration and power of the motor—the positive action of brakes.

These are facts because Columbia Six is founded on only true mechanical excellence, even to the smallest details. It is based only on those units which are recognized leaders in the automotive field. It is built only by the most expert designers and engineers.

It is a great satisfaction to find a man or woman who "wears well." It is extremely gratifying to find a car which is so "good clear through" that it shows no weak characteristics after long and intimate acquaintance.

COLUMBIA MOTORS COMPANY
DETROIT
U. S. A.

An Increasingly Profitable Sales Agreement

The Columbia Six Sales agreement is more valuable tomorrow than it is today.

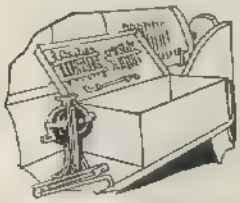
As a consequence, Columbia Six today is represented by men who are building permanently—not simply for a single year—but for years to come, and who are building, also, for permanently increasing profits.

If you are planning systematically and broadly for a valuable business and permanently increasing returns, you, too, will be interested in Columbia Six.

The Gem of the Highway

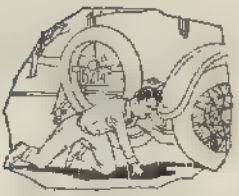
Rees Passenger Car Jack

This cutaway view of the Rees automobile Jack illustrates in general the mechanical principle embodied in all Rees Jacks. Capacity 4000 lbs. Operated from a standing position by its long folding handle. Retail Price $9.00, west of the Rockies, $9.50.



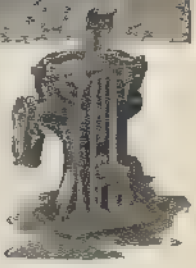
It Fits Readily in Any Tool Box

Keeps You Out of the Wet and Slush



Why Grovel in the Old Way

Model 21—A Ten-Ton Rees Double Worm-Gear Drive Jack Lifting Five-Ton Truck of the Gulf Refining Company.



REES
DOUBLE WORM GEAR DRIVE
JACK

Motor Truck owners are just as pleased with Rees Truck Jacks as motorists are with the Passenger Car Model Rees. In fact, many prominent manufacturers and operators of large fleets of trucks have adopted Rees Jacks as their standard lifting tool equipment.

Rugged construction is combined with proportionately light weight in Rees Jacks. This convenience and their giant lifting power are obtained through the unique double worm-gear drive principle of power application. Rees Jacks are great time savers, and are absolutely dependable in any emergency.

Jobbers –Dealers

Rees Jacks are so distinctly superior that every user talks about them. Every Rees you sell helps to sell others, and remember there is a complete line of Rees Jacks, a model for every jack need. If your territory is still open, there's a big sales opportunity for you in handling Rees Jacks. Write for complete information.

The Very Life of Motors Depends Upon Proper Lubrication

AUTOMOBILE engines are very much like humans. In order to perform their daily functions properly, they must breathe freely. An engine is to an automobile what the heart and lungs are to humans. Imagine a man doing hard work with heart and lungs in poor condition.

CREW LEVICK MOTOR OIL

is the life-blood of sturdy motor cars

Because it assures a perfect film of oil between cylinder walls and pistons, it provides perfect lubrication.

CREW LEVICK MOTOR OIL is refined from pure Pennsylvania paraffin base crude. The finished product is the highest grade oil known for lubricating purposes. It lubricates perfectly all bearings, shafts, pistons or other parts; will not break down or gum under extreme engine heat. CREW LEVICK MOTOR OIL has behind it an experience of 57 years in every phase of lubrication.

Why Customers Come Back

The dealer who sells quality products that give lasting service earns the grateful appreciation of his customers. Many of the reorders and returning customers are attributed by Blazer Dealers to the unfailing performance of this remarkable Spark Plug Line.

In the Long Henry they have a superior Ford motor spark plug that is specially constructed with an extension below the thread that carries the hot, fat spark deep into the mixture and through the dead gas. Its extremely long shell keeps the porcelain away from oil and heat, making it as near carbon proof as possible.

In the A. I. M. Auburn Mica Plug dealers can recommend a plug adapted for use on hot engines that have heavy-duty work. Their dependability is a proven fact. In the Blazer they have an extremely hardy Spark Plug with an unbreakable insulator, developed by our chemists for airplane motors.

Curtis Free Air Service Brings You New Patrons and Increased Profits

It is generally recognized that compressed air to fill tires frequently carries oil and that this oil has a deteriorating effect on inner tubes. For this reason motorists are discriminating in their use of "free air service"—and are on the lookout for the Curtis sign because they know that Curtis Air is free from oil. It may be that the installation of the CURTIS outfit will be the beginning of a new era in profit-making for you.

Curtis Air—Free From Oil

Curtis Air Compressors, through a patented construction, prevent oil from getting into the air line—therefore the air delivered is clean, pure and free from oil. The many other exclusive points of superiority, together with the simplicity, sturdiness and dependability of Curtis Compressors make them the popular choice everywhere.

With the two new outfits illustrated—Style "Y" and Style "V"—the Curtis line is now complete, offering a suitable compressor to meet every requirement. Ask your jobber or write us for illustrated literature describing the different sizes and types of outfits.

Jiffy

Two Leaders

Numbers 200 and 350 represent the finest perfection attainable in Jack construction. The dealer who sells them gives his customer full value—excellent material and the product of careful workmanship.

Number 200 Jiffy Auto Jack is made of Solid Steel and Annealed Iron. It is suited for work on light cars but like all Jiffy Jacks it has a range of capacity up to ¾ ton. Height is ten inches. It raises to 15½ inches, and retails for $2.25, a popular price.

No introduction is needed for the well-known "Indestructo" Jack, No. 350, so called because of its extreme durability and absolute dependability. It has the same short fulcrum which is a distinguishing characteristic of all Jiffy Jacks and lifts its load with one short downward stroke; its capacity is 2000 lbs. Retails for $3.75.

Carry the leaders in the leading Jack Line in stock at all times.

If your jobber cannot supply you, write us direct for detailed information.

DENBY
MOTOR TRUCKS

DEALERS!

There are big opportunities in merchandising Denby trucks; maybe there's some open territory in your section. A letter to the factory will post you.

In big city and small—for use on city streets or in interurban hauling—storage and moving companies prefer the Denby.

With bulky, top-heavy loads and big van bodies, whatever the road or grade, they go unfalteringly about their business, steadily earning dividends for their owners.

Backing this dependability is an economy of fuel and tires, and a low upkeep expense, that makes the total cost of transportation very low.

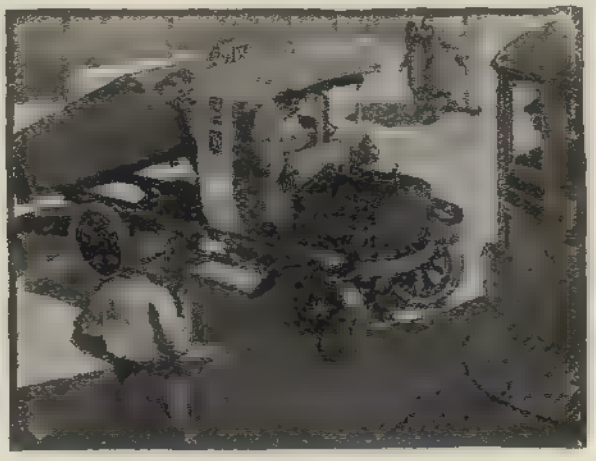
HAUL from HALL

THE HALL "SHORT SPECIAL" TRUCK



Announcing
the New Hall "Short Special" Truck
Especially Adopted for the Needs of Congested City Traffic

The Hall "Short Special" meets an actual and vital demand. It fills a need in the work of city trucking that puts it in a class of its own. It reduces time of loading, haulage, delivery and consequently increases hour-mileage and lowers cost per ton haul—all points that spell increased service and operation economy for truck owners of every class.

Among the outstanding advantages of the Hall "Short-Special" truck in city work, is the fact that it will take the shortest street and alley, turns easily and can be backed up to curbs on streets used by street car lines without interfering with the regular stream of traffic.

The Motor Car Spring and a Sectional View of the Disteel Wheel

Facts You Should Know About the Wheels of Your Motor Car

A motor car wheel should be so designed and constructed that road shocks cannot be transmitted directly to the bearings and the delicate mechanism of the car.

In the illustration at the top of this page is shown a motor car spring. That spring is thicker, heavier at the center than it is at the ends.

The spring is tapered.

It is tapered because it *is* a spring. The taper distributes and diffuses the strains.

The spring is dished.

That means it is curved slightly, which also serves to distribute and diffuse the strains.

Another example — In precisely the same way as the muffler of your car breaks up, diffuses and nullifies the noises that come from the exhaust of the motor—the wheel of the motor car can and must break up, diffuse and nullify the road shocks, before they reach the hub, the axle and the bearings of the car.

The spring is made of steel.

Disteel Wheels are made of steel.

That Disteel Wheels add immeasurably to the beauty and distinction of good motor cars is, of course, universally accepted. However, from the viewpoint of mechanical excellence and in conclusion of the foregoing statements, we ask you to remember that—

Disteel Wheels are Tapered, Dished and Made of Steel.

Wheel Talk Number One

Being the first of a series that will appear at regular intervals in this publication. In this series we propose to tell some simple basic truths about motor car wheels for the information of motor car owners and for the development of more economical and more comfortable motoring. We propose to outline, not only the principles of the scientific designing, engineering and construction of motor car wheels, but also those essential features which the car owner can and should demand of his wheel-equipment. If by these wheel talks we assist in raising the standard of wheel construction, we shall feel that we have been abundantly repaid.

TRUCKS

The Tenth Year Federal

Another FEDERAL

The TENTH YEAR FEDERAL TRUCKS

This is the sign of the "Tenth Year Federal" a sign significant of ten years of success in every field of truck transportation

Every dealer will realize what "The Tenth Year Federal" signifies in the kind of prestige that makes for a dealer's success.

Behind that phrase are ten long years of service to the truck buying public. Expressed in that phrase are all the efforts of our engineering department, our sales department, our advertising department—all the efforts of our distributors and dealers—all the good performance of every one of the $50,000,000 worth of Federal Motor Trucks distributed throughout the world—every day of every year for ten years.

The Tenth Year Federal! It signifies success, the success of hundreds of Federal dealers and distributors, the success of thousands of Federal owners—all founded to greater or to less extent upon the success of the Federal truck.

But that phrase "The Tenth Year Federal" signifies something more than mere material success—it signifies firm adherence to manufacturing ideals and ideals of fair dealing with the public and with Federal dealers. The good will which the general public holds for Federal is found intensified in the loyal attitude of Federal dealers toward Federal.

The Federal Motor Truck Company is proud of that attitude—proud that it can deserve such loyalty as it finds among its dealers and distributors. That loyalty is one of the big reasons why there are so many Federals throughout the world today. And in that loyalty is to be found one big reason why Federal will continue to increase and multiply much more quickly in the future, even than it has in the past.

One to Five-Ton Capacities

HAYES *Wire Wheels*

It is really but a step from the preference for wire wheels, now become so general, to the more decisive preference for the Hayes.

Makers and owners of higher priced cars first began to single out the Hayes, because of certain very definite superiorities. Now you see this wheel on cars of all types.

Motor car manufacturers very evidently have convinced themselves of the great value of these unusual features.

Of those who use wire wheel equipment, the great majority regularly specify the Hayes.

Even casual observation in your own locality will reveal the breadth of preference for the Hayes.

The fact is that your own local conditions are really a reflection of the Hayes standing all over America.

Many owners will have their cars equipped with Hayes wire wheels during the period of winter layup or overhauling and painting.

HAYNES

America's First Car

THE Haynes motor has always been an integral part of the Haynes automobile—ever since Elwood Haynes, more than twenty-seven years ago, created America's first car. A large part of the enviable reputation of the Haynes has been built upon the stamina and dependability of the famous Haynes motor. The Haynes motor is manufactured by experts in the Haynes factories.

Haynes engineers, profiting by twenty-seven years of experience, have from time to time developed improvements to the motor.

Whether it is the Light Six or the Light Twelve motor, it is designed and perfected for its special functions. To secure the fullest power from the gasoline used, to transmit that power most effectively to the driving gear, to respond promptly and surely to the demands made upon it, to live and endure under all manner of usage, and constantly to give that confident, velvety power which is its distinguishing factors—these are the outstanding characteristics of the famous Haynes motor.

The abundance of velvety power of the famous Haynes motor is the keystone of the four factors of character to be found in the new Haynes—beauty, strength, power and comfort. The Haynes car is 90% Haynes made in the mammoth Haynes factories which are devoted to the exclusive manufacture of fine automobiles.

A beautifully illustrated brochure, and prices, will be sent on request. Address Dept. 250.

1893 THE HAYNES IS AMERICA'S FIRST CAR—1920

The Stimulating Influence of the New Season

THE distinctive Jackson line for 1920 presents at a medium price many of the finer features of the highest priced cars, with the result that it has won instant recognition in every motor car assemblage.

Each model reveals that lithe trimness which fairly breathes power, strength, flexibility, and comfort. You'll sense it in the touring car of graceful modishness; the rakishly handsome sport model which excites interest because of its daring difference, and the ultra-advanced sedan of quiet distinctiveness and refinement.

The Jackson line offers one of the real impelling business builders of the year. Full particulars on request. Touring Car, $2150; Sport Car, $2650; Sedan, $3150.

The Future Style Trend

Forecast by New Mitchell Design

These new Mitchell Sixes bring to motoring America its first accurate example of a coming style tendency. They now reveal the ideal toward which creators of motor car designs have long been working.

Striking reforms are seen in every detail. There is complete harmony throughout.

Viewed from any angle—from inside or out—the effect is impressive.

The long, yacht-like sweep of the body is made doubly pleasing by an extended moulding and bevel crown. Note the graceful slanting lines of radiator, hood, windshield and doors. See how they express the gliding sensation one experiences when riding in these fashionably modern cars.

Inside the body will be found the handwork of master craftsmen. The manner of applying the upholstery, for example, shows the matchless care employed. Again in the comfortable roominess is the art of the master designer apparent.

Last season's Victory Model has definitely proved the advantages of Mitchell's many mechanical improvements. But we were not quite content with that success, and now offer many additional betterments in chassis and motor.

Several important refinements have been made, and accuracy in manufacture has been much improved. These features and the new bodies complete the motor car sensation of the year.

Profitable opportunities are open to aggressive dealers. We invite correspondence relative to these new cars and the Mitchell sales plan.

THE MITCHELL MOTORS COMPANY, INC., RACINE, WISCONSIN

5-Passenger Touring Car
3-Passenger Roadster 5-Passenger Sedan
4-Passenger Coupe

A *New* Closed Car That Fills a New Need

THE Lex-Sedan is the *first* car with the *body* built for the top; as perfectly matched a unit in appearance as the built-up type, yet it is—

Hundreds of pounds lighter; more economical on tires and fuel, and—

Flexible; no more of the usual strains, twists, and top-heaviness with resultant danger of damage and breakage, therefore—

More practical; permitting greater use on all kinds of roads.

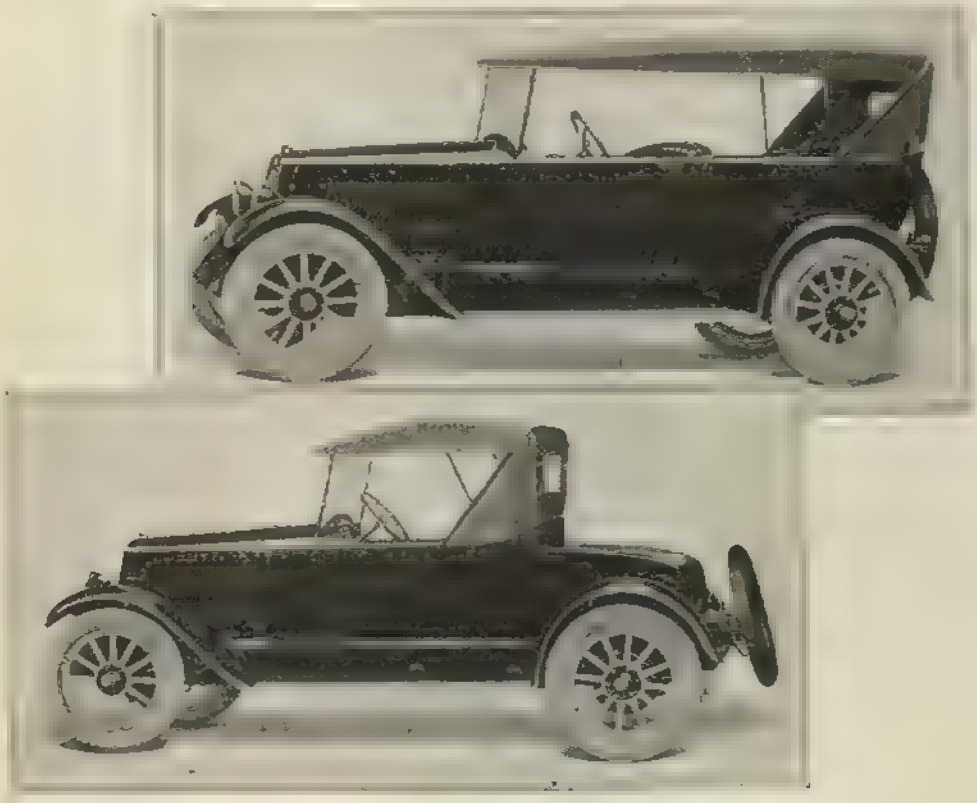
Lexington is able to *originate* this wonderful improvement because top, body and chassis are built practically under one roof and one direction. Dealers are invited to write us about representation.

Lexington Motor Company, Connersville, Indiana, U. S. A.

NEW CARS AT THE SHOWS

Mitchell Has New Bodies on Victory Chassis

Few changes have been made in the chassis of the Mitchell Victory model. The exterior appearance is entirely different, however, owing to the adoption of a new line of bodies. The radiator, hood and door edges have been given a backward slant, parallel to the angle of the windshield, and even the radiator filler neck has been placed at the same angle. There are two rows of louvres in the sides of the hood to improve cooling.



Tilted Radiator on New Michell Model

The slanting of the radiator, hood and door edges on the new Mitchell Touring Car and Roadster models adds a touch of distinction. The chassis is the same as that of the Victory model announced sometime ago.

Minor changes in the chassis include the location of the speedometer drive on the transmission, the mounting of the radiator on a separate frame cross member, the use of lighter and more compact generator and starting motor units, a change in the starter gearing to give more power for cranking the engine, the adoption of an improved type of battery terminal, a new lock switch for the ignition and the use of a new type of grease cup at various points in the running gear. In other respects, the chassis remains similar to that described in the June, 1919, issue on page 250.

Velie 34, a New Light Six

Sensing the demand for smaller and lighter cars capable of operating economically on low grades of fuel, the Velie Motors Corp., Moline, Ill., has developed a new light six, known as the Model 34, which was shown to the public for the first time at the New York Show. This model is an entirely new production throughout, with a wheelbase of 112 in. and 32 x 3½ in. tires.

The engine is special Falls 6-cylinder of 3⅛ in. bore by 4¼ in. stroke, with valves located in a removable cylinder head. The crankshaft is an extra heavy balanced three bearing type. The camshaft and the generator shaft are driven by helical gears in the front of the crankcase. The latter unit is so designed that pistons can be removed

LIPMAN PUMP WORKS, BELOIT, WIS., U. S. A.

MASTER TRUCKS

—the most desirable line of Motor Trucks on the market

THERE are two hundred different companies manufacturing Trucks in this country, yet most of the business is done by only ten. Theirs are the Trucks in real demand; live, successful propositions, proven; profitable to buy and to sell. Prominent among them—forging faster to the front each year—is the Master.

A complete line, built by a company with unlimited financial resources; selected highest-quality units in models practical down to the last machine bolt; tested and found superior in hard service—with extra power, and in balanced oversize throughout; backed by a liberal sales policy and with prompt deliveries from a modern factory—this is the Master story.

Compare engine power, chassis dimensions, construction. Compare *mass* of parts—and *quality* of parts. Compare performance in owners' hands. Learn the experience of prosperous dealers who are making the sales and making money—and draw your own conclusions.

We invite correspondence from high grade merchandisers.

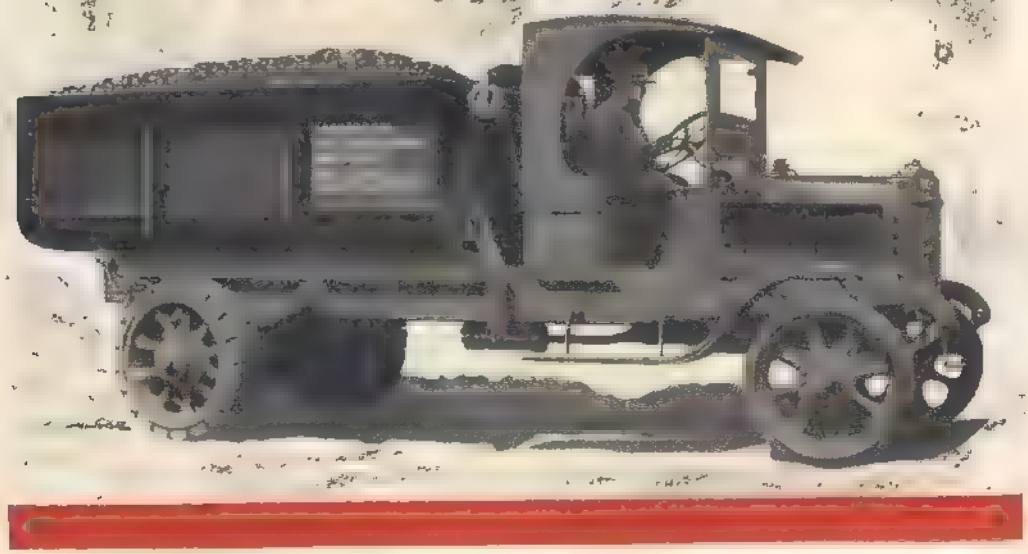
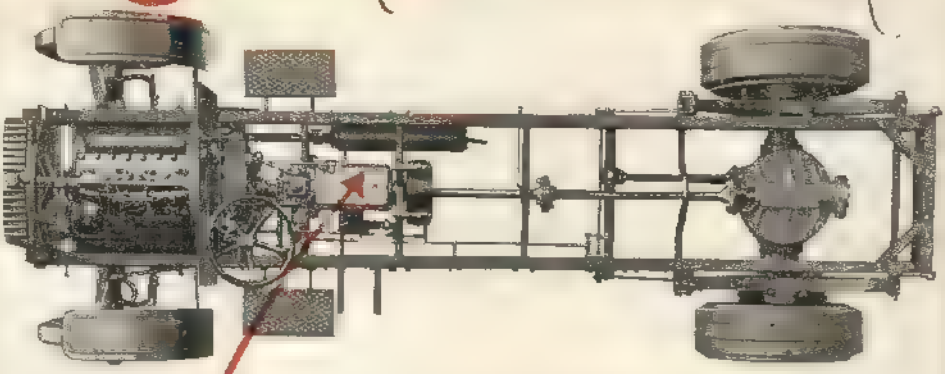
MASTER—Design and Construction
1½ Ton to 7½ Ton Chassis



The SCHACHT New Ten Speed Transmission.

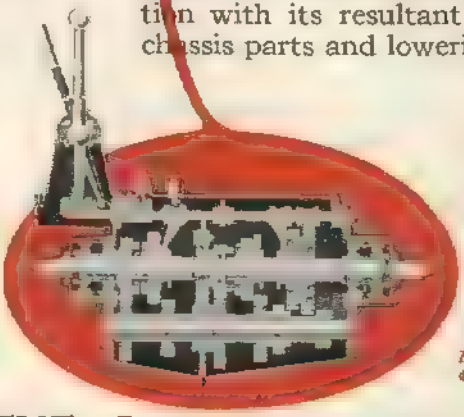
with Five Ton Truck



ALTHOUGH the "Schacht" ten-speed transmission may properly be termed "two transmissions in one" since it actually doubles the range of the average four-speed transmission, this is accomplished without sacrificing simplicity in construction and without complicating its operation.

Twenty to twenty-five miles per hour on high gear is easily attained over a good level road with a five-ton truck, which at the same time has a low gear reduction sufficient to negotiate any kind of a road or grade wherever the wheels can secure traction.

Although the road speed has been doubled — engine speed has been reduced, eliminating excessive vibration with its resultant wear and tear on engine and chassis parts and lowering fuel consumption.



A NEW era in motor truck efficiency is at hand. Progressive dealers will be quick to take advantage of the opportunity to secure one of America's oldest and most progressive truck lines —with the greatest selling possibilities ever afforded by any make of truck.

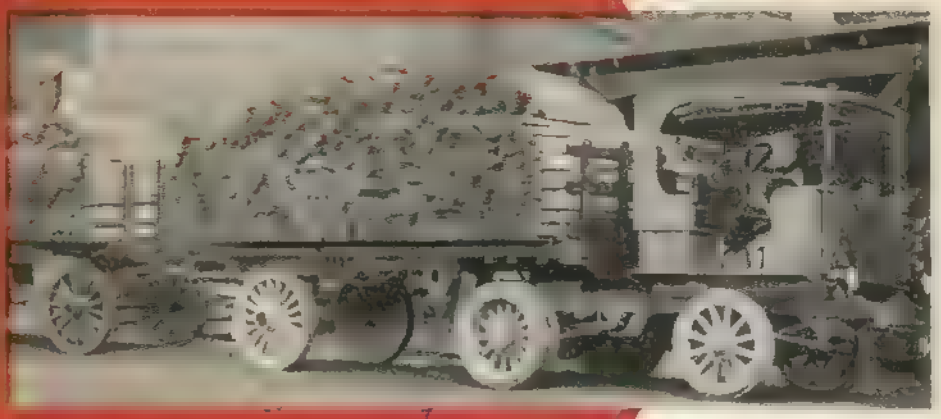
WATSON

Haulage



A Complete Line of Haulage Equipment

IT IS a distinct advantage for the User and the Dealer to do business with a house big enough to manufacture a complete line of haulage equipment.

Industrial Concerns, Merchants and Farmers, having their own private transportation problems, naturally are anxious to adopt the right haulage system—be it trucks, tractors, trailers or what not.

With its four sizes of Trucks, its Tractor and Trailers, Watson is able to give unbiased advice concerning the best equipment suited to the needs of each particular case. Watson is selling NOT simply a UNIT, but a SYSTEM.

The line is flexible and covers all needs from that of a small, speedy delivery truck, up to that of a fleet of mixed mastodons of heavy hauling.

Write for particulars.

MOSSBERG

Lasting Service and Satisfaction

Strains and twists, jars and bumps—every conceivable hardship of the road that puts a burden on the springs of passenger cars or trucks—have been successfully met by Titanic Springs, and proven their superiority to the old fashioned center bolt, or nib type.

At the center—the danger point of all other springs—Titanics are strongest—so strong, in fact, that they are guaranteed forever against center breakage, the very place where three out of four of the ordinary type fail—thus they combine safety with maximum riding comfort. In ten minutes to three hours you can get Titanic Springs anywhere. See *Chilton's* or *Auto Trade Directory* for list of distributors.

Fle-X-met Hose *and* Accessories

"Fle-X-met" H. A. Tubing is used for Exhaust on Ace Motor Truck

Fle-X-met is Chosen for Dependability!

THE American Motor Truck Co., of Newark, Ohio, chose Breeze "Fle-X-met" No. H. A. Tubing for the exhaust on their new motor truck because they *know* that "Fle-X-met" can be depended upon to deliver perfect service under the most severe conditions.

Packed with asbestos, rubber or substitutes. Fle-X-met H. A. is the ideal tubing for exhaust or carburetor hose, as it will not kink or collapse, is unaffected by vibration, heat, cold, gases or moisture.

The Breeze Fuel Strainer (sectional view shown) is a simple and inexpensive little device for installation in the fuel line. Maintains efficiency of the fuel. Prevents stopped line and many carburetor troubles. Composed of only two pieces. Nothing to get out of order.

The Fle-X-met Line of Metal Tubing is most complete. Made in any size and length, of any metal, for many uses in the automotive field—such as Covering for Stationary and Movable Wires; Speedometer Shafts and Casing; Air Hose, etc.

Write on your business letterhead for the most complete catalog ever published on the subject of Flexible Metal Hose and Accessories.

PHELPS

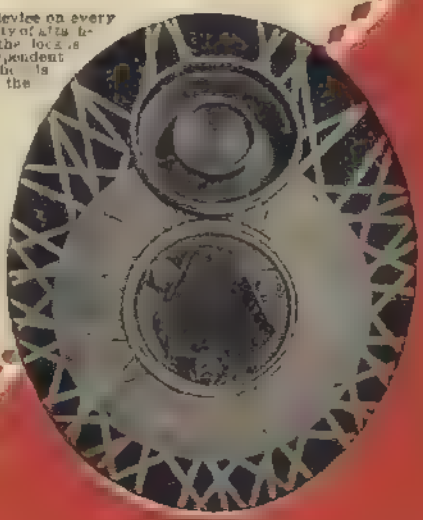
DEMOUNTABLE WIRE WHEELS

THE demand for wire wheels is established. As a Jobber your problem is which Wire Wheel is best suited to the needs of your customers. Always carry an adequate stock and consistently recommend PHELPS Wire Wheels.

They are so graceful in appearance that they enhance the beauty of any car, and in construction their superiority is evident after a critical inspection. It is the only wire wheel manufactured not using a threaded inner hub construction.

The famous Phelps Drive used on rear wheels is herewith shown with the interlocking teeth that mesh in motion, providing a positive drive that prevents slipping or excessive wear.

This illustration shows the new locking device on every Phelps Wheel, that provides absolute security of this attachment—the only wire wheel made where the lock is attached directly to the inner hub and independent of the action of the outer hub while the wheel is in motion. Wheels cannot come off on the Phelps type of construction



Our special jobbers' proposition is a winner. It means a liberal margin of profit. Write now for 1920 Jobbers' Selling Terms.

Phelps Manufacturing Company
Columbus, Ohio

Phelps
DEMOUNTABLE

Each suit packed in dust-proof carton
Packing in cartons adds EXTRA value to Protexall Suits

They sell more readily

People like to purchase goods in boxes. They get fresh, clean stock. They also feel that boxed goods are better, because the maker values them highly enough to give them the protection of boxing. Carton goods are distinctive. Unboxed goods are ordinary. The carton *adds actual value* and salability to Protexall Suits.

Stock stays clean easier to handle

Dealers find great advantage in the individual dust-proof Protexall Cartons. They're easy to handle in the stockroom and in the store. The boxes look neat on the shelves. The box tells the size instantly without handling. The stock is kept clean and the sizes are readily kept separate.

The Carton Typifies the Care and Value that Goes Into PROTEXALLS

They're made of finest grade Government Khaki, cut roomy, with *special* SPRING-BACK *feature* which prevents binding across chest, back and seat. Keeps them comfortable after washing. Protexall gives long, satisfactory wear. Quite the best thing of their kind.

Ask for nearest dealer's name if you don't know him

DEALERS: Write your nearest jobber for catalog and details of the Protexall Proposition.

PROTEXALL COMPANY
Abingdon, Illinois

Pierce Governors

ALWAYS LINKED WITH THE BEST MAKES OF MOTOR TRUCKS

THE Diamond T is only one among one hundred and three prominent makes of Motor Trucks on which Pierce Governors are standard equipment.

Truck manufacturers who let quality and not price guide them in the selection of units for their trucks, do not buy governors until their Engineers have given the different types the most gruelling and exacting competitive tests possible.

As a result of such tests, more Truck Manufacturers are today using Pierce Governors than all other makes of governors combined. Pierce Governors are superior *—always.*

GOODYEAR

"Gasoline, Sir?

Here is Quick Service!"

This is the message of the Rapidayton for the passing motorist

The Standard color of the Cut No. 25 Rapidayton Pump is red. For a slight additional cost we will paint them any color you choose.

Like the taxi man in front of the big Metropolitan Hotel, but in a much more dignified manner, the Cut No. 25 Rapidayton Pump hails the passing motorist, informing him that yours is an up-to-the-minute garage where he can obtain perfect gasoline service in a minimum of time.

Its bright red color, its trim, lithe lines, its thoroughly business-like appearance, its mechanical perfection, make the Cut No. 25 Rapidayton a real pump and a sales-puller for any garage that installs it.

Rapidayton

THE SPEED PUMP

But better looks and more perfect mechanical details are not its only virtues; the Rapidayton is also faster—30 per cent faster than any other pump on the market.

Ordinary five-gallon pumps require at least 16 strokes of the pump handle to dispense five gallons of gas. The Cut No. 25 Rapidayton requires but 12 strokes—ten forward and two quick return.

There are likewise many other features you will welcome, many of them exclusive. For instance, there is easy access to valves and piston, cork insulated cylinder, improved hose draining valve, machine-cut gears and rack.

You will want to become better acquainted with this Cut No. 25 Rapidayton Quick Return Stroke Gasoline Pump. Write and we will forward our catalog and bulletins.

NEW EQUIPMENT, PARTS AND SUPPLIES

New Spring Seats for Cars or Trucks

The Sagless Auto Seat incorporates a novel construction. It is stated by the maker, the Sagless Auto Seat Co., Inc., 2210 S. Wabash Ave., Chicago, that it will outwear ordinary seats. The passengers ride

Sagless Auto Seat

This illustration shows the construction of the sagless seat, which can be had for any make of car or truck.

practically upon a shock absorber and are held in suspension. The seats for Ford cars are carried in stock. The prices for the front seats are $10; front seats divided are $12 and the rear seat is $12. The accompanying illustration will show the construction of one of these seats.

Valve Silencer for Buicks

A new device to reduce the noise from the overhead valves on the Buick car when they become worn is being made by the Newton Manufacturing Co., Plainville, Conn. The noise is generally due to play or side-slap of the rocker arms, which is taken up by this simple device. Slotted brass collars are placed on the ends of the rocker arm pins, over the cotter pins, which are not removed. The arms of the silencer press against the collars by spring pressure, as shown in the accompanying illustration. This holds the rocker arms against the bracket, allowing them to oscillate freely, but reducing the noise.

"88" Motor Oils

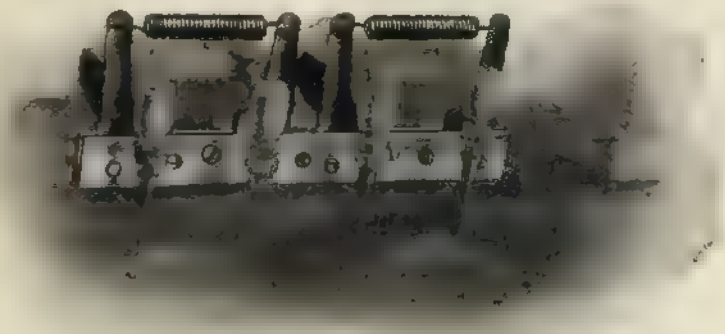
The "88" line of motor oils and greases covers "88" Motor Oil, "88" Gear Compound and "88" Cup Grease. These are being marketed by Motor Oils, Inc., 56 E. Randolph St., Chicago. The "88" motor oil is for use in the engine and is stated to have excellent lubricating qualities, to be pure and clean, and to contain no sediment. The "88" Gear Grease is of such a consistency

"88" Motor Oil for Use in Engines

In addition to the "88" Motor Oil is manufactured the "88" Gear Grease and the "88" Cup Grease.

that it forms a coating over the gears and bearings to provide lubrication. It is a semi-liquid and has no artificial body or coloring, or anything that will reduce its lubricating value. It is sold in five-gallon pails at $2.50.

The "88" Cup Grease is an excellent lubrication for cold surfaces, such as spring joints, steering knuckles, rod bearings, fan bearings, etc. It comes in one-lb. cans and five-lb. pails, selling per pound at 35 cents and 25 cents, respectively.



Valve Silencer

This illustration shows a new device to reduce the noise from the overhead valves when they are worn, on the Buick car.

Another Reason for Selling Reflex Spark Plugs

—another reason which means sales and quick turnovers—the above illustration.

The massed carbon on the *plate* signified heavy work and lubrication. The clean *points* of the plug signify unfailing power in *spite* of such operating conditions. "—and the plug was still good after 24 months' service," writes the motorist.

Reflex No-trouble ignition for your customers, stimulated by Reflex advertising and real dealer helps, and a proposition which nets you *profit*, are three of the reasons why you should drop a card for information today.

The Reflex Ignition Company
1357 West 106th Street
Cleveland, U.S.A.

REFLEX SPARK PLUGS

KEEP THE CAR ON THE GO!

This 5 ton Rowe speed truck on Pneumatic Cord tires is designed to operate at a speed of 20 to 25 miles an hour without injury to either load or truck, and fills a definite long-felt want.

Dealers:

Eight years of constant truck production, a mammoth plant of the most modern design and construction, and greatly increased productive facilities, enable us now to consider a few new dealership applications.

The Rowe line of trucks is complete, ranging from 2 to 5 tons and priced from $3000 to $4900, permitting a generous margin of profit to the dealer.

Your territory may be at present unassigned, so we suggest that you get in touch with us at once for full particulars.

Makes a Ford Run Like a Six

Saves Its Cost in 60 Days

SCOE

CARBURETOR

For Ford, Maxwell, Briscoe and Dort Cars

We want dealers to handle a carburetor that never fails to prove its superiority on the first demonstration.

The market for the *SCOE* carburetor is tremendous. It will idle a Ford without a tremor or a miss at six miles an hour.

It increases its speed and power with all the "pep" of a six. Its economy is almost unbelievable.

Two moving parts perfect the operation of the *SCOE*. Their action depends upon the volume of air passing into the carburetor, and on gravity.

As this force never varies, the mixture is exactly correct under all atmospheric conditions, once the initial adjustment is made. To make it more attractive for you to demonstrate the superiority of the *SCOE* Carburetor, we ask you to try it out on our 30-day plan.

When you receive the carburetor, remit half the net. Test its performance for 30 days. If satisfied, send us the balance. If not, we will return your money.

Send in this coupon today. We believe it will open your eyes to the possibilities of a bigger carburetor business than you have ever known.

Briscoe Devices Co.
Pontiac, Mich.

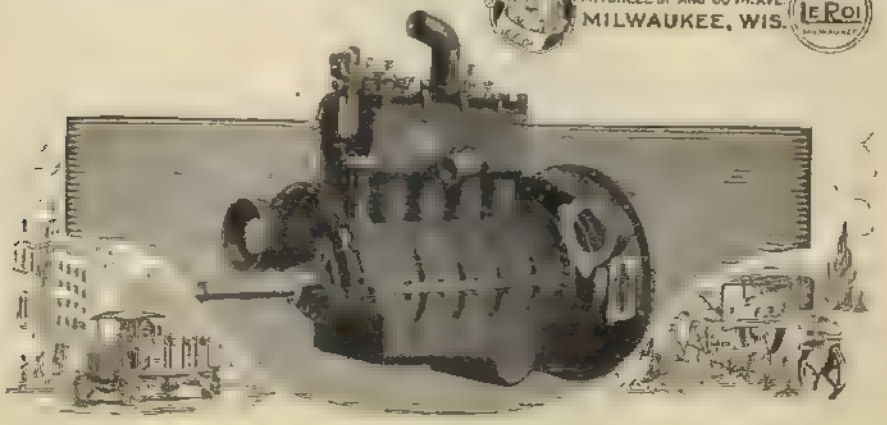
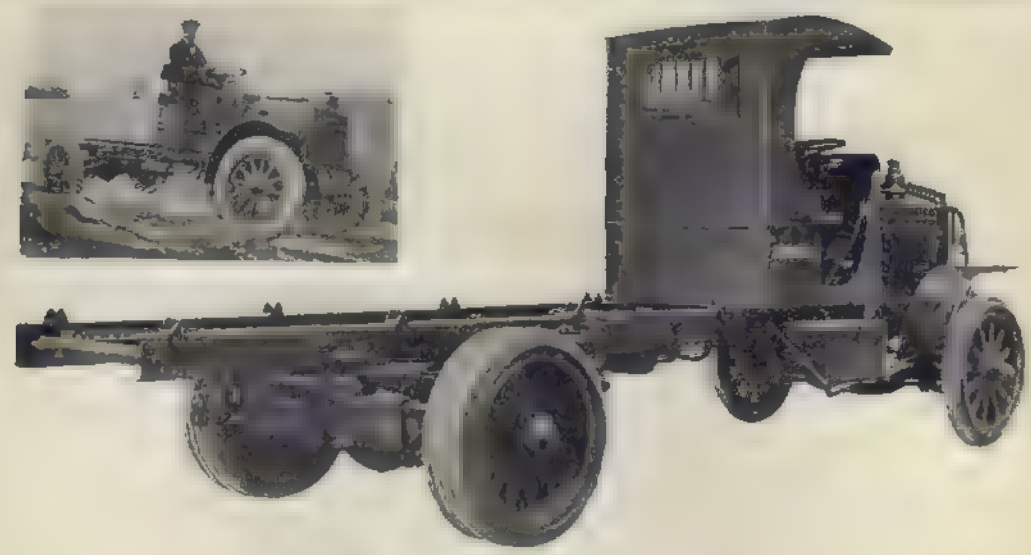
CABLE LE ROI





flexibility

The continuous shocks and twisting strains to which motor trucks are subjected when traveling over rough, guttered, worn down roads never reach the more delicate, vital parts of Selden flexible, shock-absorbing trucks. These vibrations are entirely absorbed by the new Selden method of frame construction.

Not a rivet is used in the construction of the new Selden models. S. A. E. bolts are used throughout; all joints are of a flexible type that prevents sudden jars and jolts from inflicting serious damage; and well placed spiral springs offer still further protection. The methods of suspension of the motor and radiator, too, are such as to provide abundant protection for these sensitive parts.

Even a careless driver, who never turns a grease cup, can not seriously injure a flexible, shock-absorbing Selden Truck—all the less accessible joints are fitted with graphite-impregnated self-lubricating bronze bushings.

All these and many other distinctive features of Selden Trucks combine to make them trucks of extra long life and low maintenance cost.

Write for "Transportation"

Ask us to send you regularly the new Selden Magazine—"TRANSPORTATION." It contains valuable information on the operation of motor trucks.

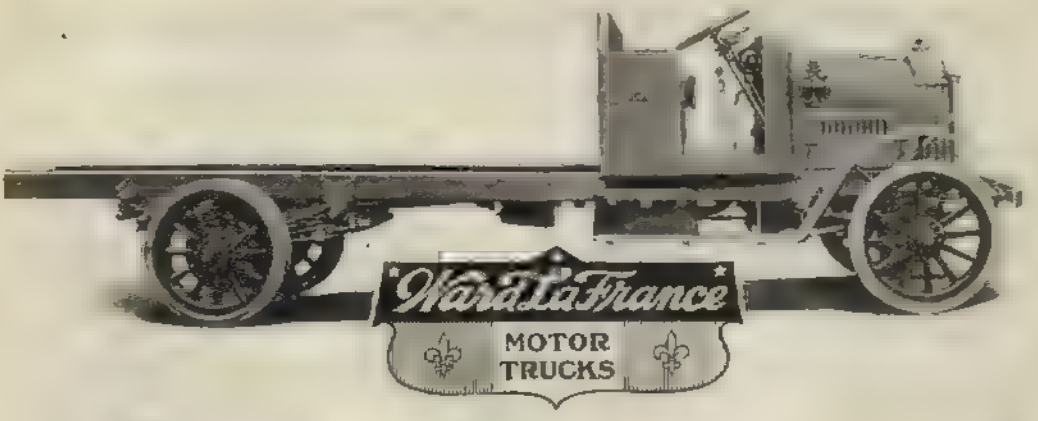
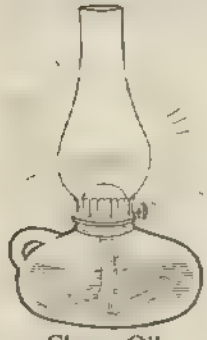
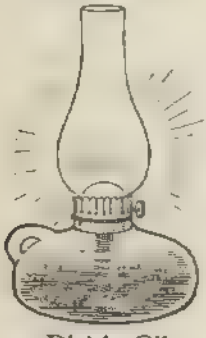
Selden Motor Trucks





Clean Oil
Clean Flame



Dirt in Oil
Clean Flame

Our Grandfathers furnished the idea for perfect MOTOR TRUCK LUBRICATION

Old ideas and ways are often best and are exceedingly useful when applied to present-day problems. For instance, here is a case that has ever been a preplexing question—the perfect lubricating system for a motor truck. Just as the wick in the oil lamp assures a bright, clean flame even though there is foreign matter in the oil reservoir, the automatic lubricating system of the Ward LaFrance truck with its oil wick, feeds a clear, clean lubricant to the chassis bearings of the truck.

The truck in use is naturally fed more oil than when at rest—exactly the same principle as the lamp. Light it, the wick feeds oil; extinguish the light and the oil feed stops; but the wick is always oil-filled and ready to feed. The truck, too, is always in lubrication, but not consuming oil till it is in action. So then: Automatic wick lubrication eliminates the one failing in the human element, "Forgetting to grease it"—furnishes none but clean lubricant, keeps bearings washed clean; keeps them oiled.

DEALERS: Opportunity is offered a few live wire dealers to link themselves up with an attractive co-operative proposition. Write for particulars.

Sterling Spark Plugs

Why a Tractor Plug for a Motor Car?

Sterling Tractor Spark Plugs have been developed to meet the most exacting requirements of tractor motors.

Ordinary spark plugs will not withstand, for any length of time, the high heat produced by these internal combustion engines.

Sterling Tractor plugs meet the severest test imposed, for they are scientifically constructed. The porcelain core is unusually heavy; the combustion chamber extra deep, and the center electrode—made of monel metal—will not warp.

Since Sterling Tractor plugs fulfill the demands of tractor engines they are, naturally, the best possible spark plug for use in the motor car. These heavy-duty plugs are like all Sterlings, they are separable and easily cleaned.

Progressive garages and supply dealers everywhere sell and endorse these Sterling guaranteed plugs.

ULTRA SEAL
THE PERFECTION PISTON RING CO
NON-LEAK PISTON RINGS

ULTRA Seal Non-Leak Piston Rings go thru an improved process of shrinking and compressing the metal, leaving the outer diameter soft, so that it does not wear the cylinder walls.

We have the most improved scientific methods of producing a high-grade Piston Ring which insures a ring perfect in circle, bearing with equal radial tension against the cylinder wall and will retain this tension under all conditions of heat and wear.

Each ring is individually cast of a special analysis of the finest grade of soft gray iron.

Every ring tested for tensile strength, gauged and inspected before leaving the factory.

Our engineering department would be glad to solve any of your Piston Ring problems that you might have.

THERE is satisfaction in knowing why a motor refuses to "turn over" on a cold day. It may be battery trouble, superinduced by too much work—pulling against cold, stiff lubricants. It might be other inward troubles of the motor for the same reason.

Most winter troubles may be eliminated by using the proper oil—of proper cold test. We suggest

SUPREME AUTO OIL

as a cure for such troubles

It flows freely at Zero—starts with the engine—gives instant lubrication—relieves the pull on the starter, likewise the battery. It leaves less carbon, hence less pre-ignition—you should use it.

Supplied by any dealer displaying the sign of the Orange Disc.

The DIXIE Flyer

The Car, the Company and the Dealer

What has been said of many high-priced cars can be truly claimed for the Dixie.

Beauty, poise, dignity—the things that appeal to the eye—*the ability to take you there and bring you back*—which contributes mostly to pride of ownership—all are conspicuous in the Dixie Flyer.

And the same breadth of vision employed in the manufacture of the Dixie is reflected in the generous co-operation and permanent protection this forty-year-old company accords its distributors everywhere.

The live dealer who appreciates the sales possibilities of the Dixie Flyer—who values the spirit of Dixie co-operation—will find in this car and this company his larger opportunity.

WHAT

was the one universal query at the National Shows?

—MILEAGE—

"What will she do on tires?"
"On a gallon of gas?"

Both vital factors in present day motoring and constantly becoming more so

The price of a fluid in general use in motoring circles was recently advanced one cent per gallon—

AND IT WAS NOT WATER

In short, the car which cannot show better than a fair Gasoline and Tire mileage "has its future behind it"; the car which can make *better than a good* showing in both these items is "behind its future."

To ascertain the full meaning of the words ECONOMY—EFFICIENCY as applied to motoring, investigate the merits of

Ordinary plug (regardless of the number of firing points) is dead if even one point is fouled.
Twin Fire fires two distinct sparks. If one shorts, the other continues to fire. Double efficiency, dependability with same current.

"This Is the Spark Plug for Me"

This Is What the Motorist Says When He Sees the "Lead Pencil" Test

This simple demonstration instantly proves to the most doubtful motorist that *Twin Fires* banish all of his troubles with spark plugs.

Take any lead pencil and you can easily and convincingly prove to the troubled motorist that *Twin Fires* give two independent sparks—entirely different from any other spark plugs.

This test will prove to his sense of sight that with *Twin Fires* he will always get two distinct, hot, fat, and instant sparks—that if dirt, oil or carbon clogs one point—the other point continues to fire.

Show Him Twin Fires— Then You Will Equip His Engine

The handy *Twin Fire* demonstration outfit enables you to prove how this plug overcomes troubles from oil and from carbon, and how it increases power. When the motorist sees this he wants you to sell him a set.

The Hit of the Chicago Show

More dealers appointed—more trucks sold—than by any other two truck manufacturers who exhibited there.

Forty new dealer contracts closed—five hundred trucks sold—that's what UNITED STATES MOTOR TRUCKS did at Chicago—and here are the reasons, as we heard them from dealers who saw the exhibit:

"A revelation in motor trucks—two years ahead—wonderful construction—unusual refinement of detail—finest line of trucks built—best looking line of trucks I ever saw—half sold when the prospect sees them—certain to give long service—unusually attractive dealer proposition."

FIVE MODELS

Worm Drive—3,000, 4,000, 6,000, 8,000 and 12,000 pound capacities. Also 1½ ton Farm Truck with five-way convertible U. S. Standard Farm Body. This complete line is the

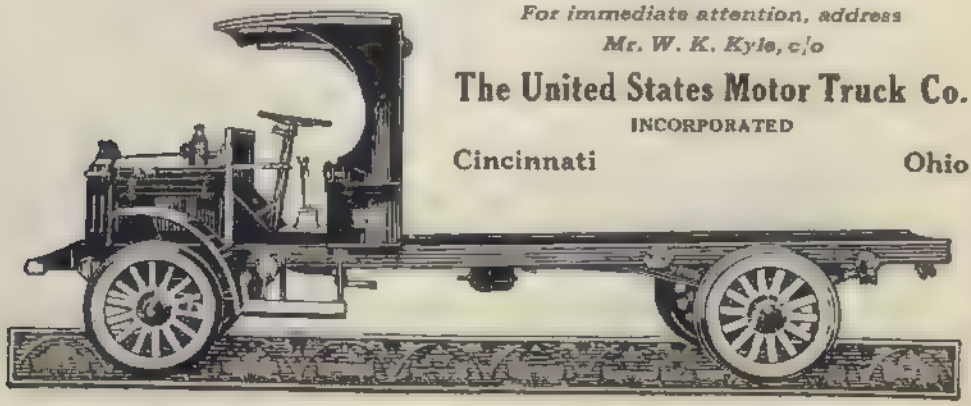
LATEST WORD

in motor truck design, construction, quality, efficiency and economy of operation.

Dealers: You want to build for the future. You want to sell the same truck line year after year. You want trucks that will SELL. U. S. is the answer. This is the line you should handle, for it is two years ahead of the others, and will STAY ahead.

The fellows who saw the line at Chicago closed on the spot. Nowhere else could they find a line of trucks completely answering the user's requirements, so dependable, both to serve the customer and make money for you.

Are you going into the motor truck business? If in it, are you dissatisfied with your present connections? Are you considering a change? Then communicate with us, for your own good. Our proposition will stand the closest investigation, and our age (12 years of motor truck manufacture) is proof that we know the business, and are in it to stay.



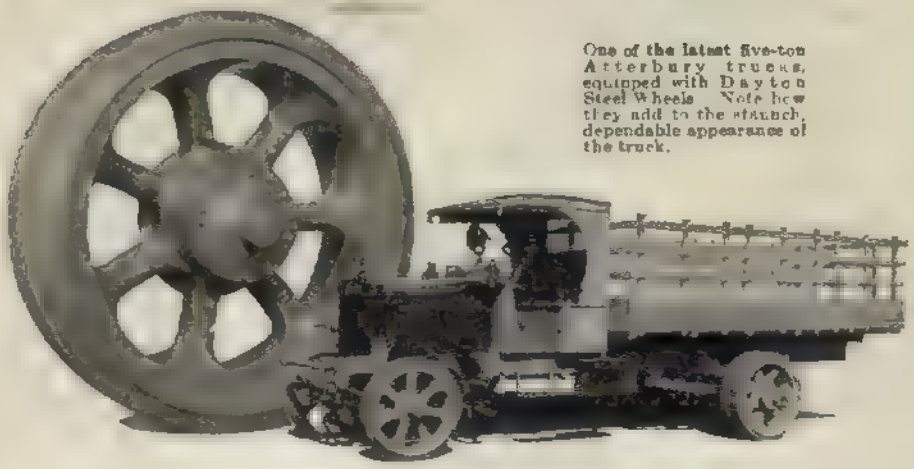
For immediate attention, address

Mr. W. K. Kyle, c/o

The United States Motor Truck Co.

INCORPORATED

Cincinnati Ohio



One of the latest five-ton Atterbury trucks, equipped with Dayton Steel Wheels. Note how they add to the staunch, dependable appearance of the truck.

ARE YOU POSTED ON WHEELS?

THIS is a time when it behooves the dealer in motor trucks to be informed about wheels.

An old order is going out and a new is steadily coming in. According to 80 manufacturers and distributors who were recently questioned about wheels, an increasing number of trucks will henceforth be equipped with steel wheels.

Is your truck one of these? Has it Dayton Steel Wheels? This is what purchasers of motor trucks insist upon knowing.

For Dayton Steel Wheels have earned for themselves a nation-wide reputation for service and economy. In seven years never a wheel has come back to us for repairs. Their lightness saves fuel. Their true roundness adds from 10 to 25 per cent to the mileage obtainable from tires. These wheels never require replacement.

These are selling facts—facts that will make sales easier for you if your truck rolls on Dayton Steel Wheels. This isn't a time to let sales slip away from you—instruct the manufacturer of the truck you handle to equip them with Dayton Steel Wheels.

Two Stage Usaco Air Compressors

Mature investigation and deliberation will emphasize the wisdom of purchasing Two Stage De Luxe Air Compressors because, in them, the writer obtains:

High pressure air in great volume, hence ***capacity to quickly handle a large number of passenger car tires*** or ***giant truck tires of any size or pressure.***

Pure air, without moisture or oil, for Usaco Compressors have ***both filtering trap and automatic air purifier, a new and valuable feature.***

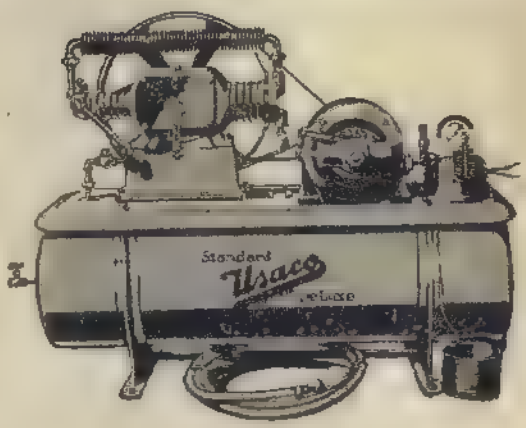
Capacity sufficient to accommodate rapid growth of business and ***serve you faithfully,*** with ***minimum attention*** and ***freedom from repairs for years to come.***

An outfit that is ***completely automatic*** and ***foolproof*** in operation because ***safeguarded*** against changing conditions and emergencies.

An outfit in which ***the cause of burned out motors, blown fuses, etc., is definitely eliminated,*** because equipped with the Usaco Patented Unloader which ***permits motor to start without load.***

An outfit that ***will not overheat*** because it is amply lubricated and equipped with ***numerous cooling fins*** and ***fan blade flywheel.***

An outfit selected as ***the best available*** by a majority of establishments, the ***adopted standard of many international corporations,*** the ***Government's choice for war service.***

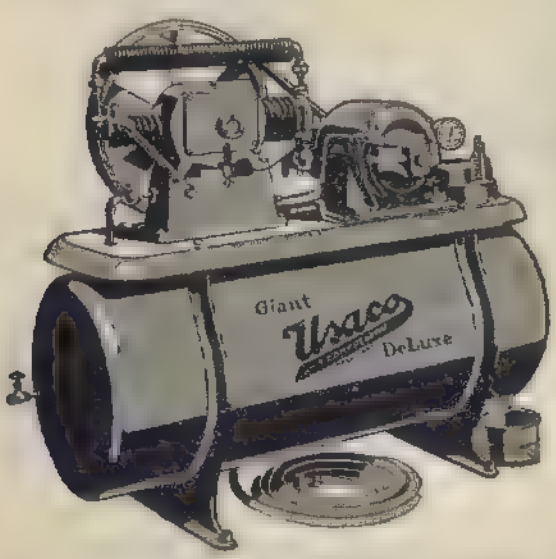


THE two Usaco De Luxe Air Compressors illustrated are the leading units of the Usaco Line, containing machines adapted for every existing need. They embody all the advantages mentioned and differ only in compressing ability and tank capacity.

The ***Usaco Standard De Luxe*** has a capacity of 4 cu. ft. per minute, and a tank capacity of 30 gallons, suitable for 200 pounds working pressure.

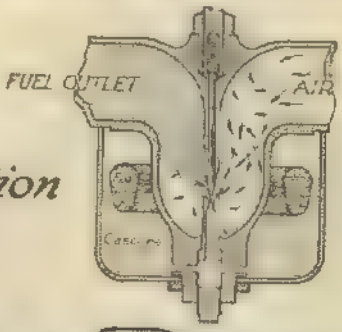
The ***Usaco Giant De Luxe*** has a capacity of 7 cu. ft. per minute and a tank capacity of 60 gallons, suitable for 250 pounds working pressure.

Both units are also furnished mounted on wheels so that they may be easily moved to the cars or other departments, if desired



Above is illustrated the Usaco Unloading Device, which all familiar with electric motors will appreciate as invaluable and in fact essential to satisfactory operation. It is obtainable only on Usaco Compressors because amply covered by Patents.

The United States Air Compressor Co.
6532 Carnegie Ave. Cleveland, Ohio



An Explanation of *The Airplane Principle*

VAN BRIGGLE CARBURETORS

A THOROUGH examination of the Van Briggle principle of Carburetion will show that it follows simple, natural laws in its functioning, and contains nothing mysterious or complex. ¶ To illustrate its simplicity, examine the cross-section above. Note the path of the inrushing air. You see that it strikes directly upon the lip of the nozzle on the inlet side.

Motor speed automatically controls fuel consumption

The velocity of this air has direct control over the amount of gasoline coming *out* of the nozzle. When speed is increased, the increased velocity of air, beating against the gasoline nozzle, retards the flow of gasoline. So the proportion of air and gasoline is instantly corrected to obtain the most power with economy, at any engine speed, under all variations of load, road or weather.

When the air strikes the top of the nozzle, it throws the gasoline in a fan-shaped spray toward the outlet side of the mixing chamber. Then the air which has passed on down and turned up toward the outlet rushes up through this spray and reduces it to a swirling vapor, which enters the cylinders almost as evenly as natural gas.

Power, Economy, Dependability

The perfect mixing of air and gasoline, to a near-natural gas consistency—gives the power, the freedom from trouble, which Van Briggle owners praise.

The Van Briggle Airplane Principle Carburetor is simple, understandable. So much so that a Van Briggle user KNOWS, when his motor troubles or fails him, that his Van Briggle Carburetor is NOT at fault.

Ask your dealer or garageman today for a Van Briggle Airplane Principle Carburetor. For either cars or trucks, in the following models: Dodge, $18; Maxwell, $15; Ford, $10. Complete, ready to install.

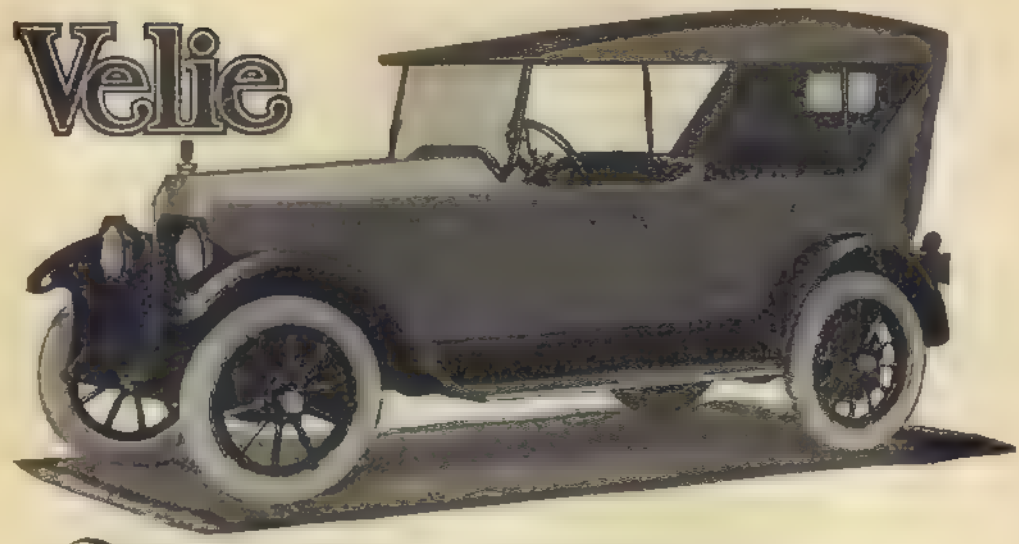
Shock Absorbers *for* Ford Cars

SAVES strain on motor and car-frame; reduces up-keep, makes riding more enjoyable. Adds to length of service; increases resale value. Makes easier driving

Does not crimp or bind springs. The rebound is caught by the reverse movement of the shock absorber. Installed without removing wheels or changing anything. Price Complete Set, ready for installation: $18

Van Briggle Carburetors and Van Briggle Shock Absorbers are sold to dealers through bona fide automobile accessory jobbers.

VAN BRIGGLE MOTOR DEVICE CO., INDIANAPOLIS, U S A.



The Authoritative Style at the Shows

VELIE cars, as the first authoritative example of the new style, will be a center of attraction at New York and Chicago as well as all other Automobile Shows.

The beautiful combination of symmetrical, mirror-like planes satisfies the finest sense of car character. Velie cars have an indefinable note of snap and elegance, with a distinction that thrills the motorist grown tired of the ordinary.

Velie closed bodies are marvels of luxury in their cushioning of mohair velvet. Noiseless windows lower easily by automatic controls. Temperature regulated to please. New ideas everywhere.

Velie Six motor with its internally heated vaporizer, burning low-grade fuel, gives many more miles per gallon. Four-bearing motor running smoothly and solidly at all speeds, with power to spare.

If your territory is not closed we suggest that you write or wire for appointment.

Extra!! — First Public Exhibition of a Smaller Velie Six — Extra!!

Another new Velie Six, Model 34, will be seen for the first time at the Shows. Lower in price—of foremost quality. Literature now ready.

VELIE MOTORS CORPORATION

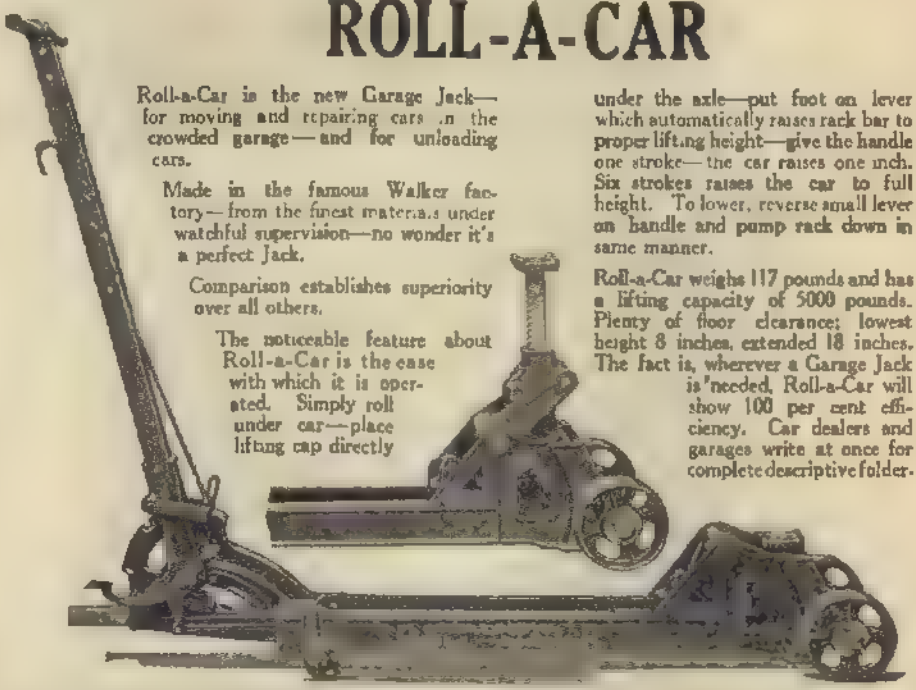
ROLL-A-CAR



Roll-a-Car is the new Garage Jack—for moving and repairing cars in the crowded garage—and for unloading cars.

Made in the famous Walker factory—from the finest materials under watchful supervision—no wonder it's a perfect Jack.

Comparison establishes superiority over all others.

The noticeable feature about Roll-a-Car is the ease with which it is operated. Simply roll under car—place lifting cap directly under the axle—put foot on lever which automatically raises rack bar to proper lifting height—give the handle one stroke—the car raises one inch. Six strokes raises the car to full height. To lower, reverse small lever on handle and pump rack down in same manner.

Roll-a-Car weighs 117 pounds and has a lifting capacity of 5000 pounds. Plenty of floor clearance; lowest height 8 inches, extended 18 inches. The fact is, wherever a Garage Jack is needed, Roll-a-Car will show 100 per cent efficiency. Car dealers and garages write at once for complete descriptive folder.

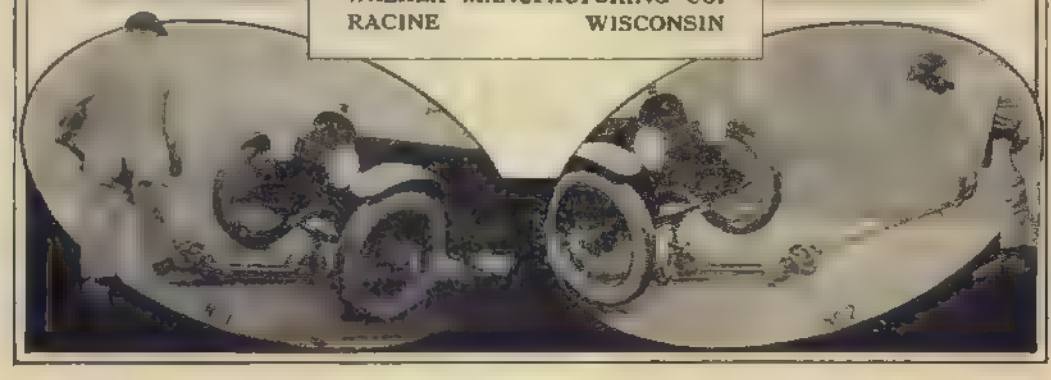
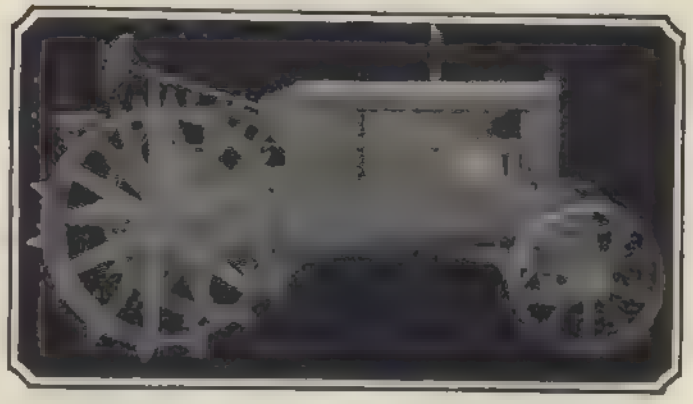
RACINE WISCONSIN





AN OPPORTUNITY

Many automobile dealers are successfully handling Wallis Tractors

In selecting the Wallis, these dealers have been careful to choose a tractor that would day after day give their customers unfaltering, faithful, economical service.

They take pride in showing the Wallis highly developed valve-in-head motor. Also how the patented "U" frame gives the lightest and sturdiest foundation ever built into a tractor.

They point out why Wallis cut-and-hardened steel gears, which run in dust-proof cases and in a constant bath of clean oil, reduce friction and increase the life of this tractor.

And they appreciate that the big institution back of this tractor—and Wallis 12 years of successful performance on American farms—are the best guarantees of satisfaction.

The result is that these automobile dealers, backed by the Wallis highly developed national and local sales, advertising and service programs, are adding substantial profit to their business.

We invite correspondence with automobile dealers that are qualified to handle an absolutely high-grade tractor proposition. (120-B)

J. I. CASE PLOW WORKS COMPANY, Racine, Wis., U.S.A.
Branches and Distributing Houses in All Principal Cities

The Wallis Tractor and J. I. Case Power Farming Implements will be exhibited at Kansas City, Minneapolis and other important tractor shows

GARAGE EQUIPMENT

JACKS

WEAVER AUTO TWIN

Regular Size

Turn Table—Transporting Truck—Lifting Jacks Tire Rest

These Jacks, in "Regular" or "Extra Heavy" size, provide the only efficient means of handling complete or dismantled automobiles in the Garage, Repair Shop, Storage Room, Paint Shop, etc., as one man can readily manipulate a car.

Their peculiar design, which confines every portion of the Jack within the limits of the car, together with the large 34-inch wheel base, offers a positive, safe and dependable support for either complete or dismantled cars. Brakes can be quickly tested, with absolute safety, wheels removed or aligned and many other small adjustments apparently of minor importance until an efficient and safe way of making them is found. They supply all the service of TURN TABLE, TRANSPORT, LIFTING JACKS and TIRE REST.

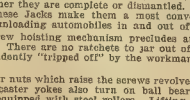
Designed to take either front or rear axle of the car, even though the latter be equipped with truss rods.

Cars can be moved SIDEWAYS, "cut in" at right angles, or turned completely around within their own length, regardless of whether they are complete or dismantled. The peculiar design of these Jacks make them a most convenient aid in loading or unloading automobiles in and out of freight cars.

The screw hoisting mechanism precludes any possibility of accident. There are no ratchets to jar out of engagement, or to be accidently "tripped off" by the workman while under the car.

The gear nuts which raise the screws revolve on ball bearings. The caster yokes also turn on ball bearings and the wheels are equipped with steel rollers. Lifting leverage, 400 to 1; 34-inch wheel base; length of handle, 34 inches; 1 ½-inch screws, diameter of wheels, 4 ½ inches; width of wheel face, 2 inches. Lifting capacity, 4000 pounds.

Regular Auto Twin Jack—Shipping weight, 50 lbs...Ea., $25 00



Extra Heavy

The Extra Heavy Type Auto Twin Jack is designed to stand up under the heavy service required in the busy repair shops and larger garages where all sizes of pleasure cars and medium sized trucks are handled daily.

It is identical in principle with the Regular Jack, but has twice the strength and capacity with several improvements in detail construction.

The new long 40-inch extension on the crank handle enables this Jack to be used on cars with low gasoline tanks and protruding tire racks.

Extra Heavy Auto Twin Jack—Shipping weight, 110 lbs. ..... Each, $36.00

Comparative Dimensions

	Regular Auto Twin Jack.	Extra Heavy Auto Twin Jack
Weight, lbs	50	110
Lifting capacity, lbs	4000	8000

Range of lift, in	9	9 ½
Each	$25.00	36 00

JACKS

WEAVER NEW-WAY

Capacity, 5000 Pounds

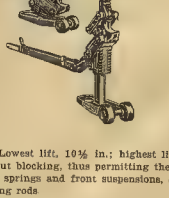
Short Construction—Pivoting Wheels

The length of the frame and wheels over all is 40 inches and the great distinguishing feature is the pivoting wheels, guided and controlled by the handle. By cutting the wheels to right or left, together with the extreme short construction of this Jack, it is possible to manipulate it in a very small space and place it in any desired position, either when placing the Jack alone or when it is supporting one end of a car.

The enormous leverage of this Jack enables one man to lift 5000 pounds with perfect ease. The lifting standard is composed of two sections, one telescoping within the other and is operated by a secure and safe ratchet lift, with ample range so that any car can be lifted sufficiently high in one or two strokes of the handle. A release latch on the handle provides for lowering the standard quickly to its minimum height.

Weaver New-Way Jack—Shipping weight, 100 lbs...Ea., $50.00

EXCEL



Main Jack—Lowest lift, 10½ in.; highest lift, 24½ in. on any car, without blocking, thus permitting the removal of the shackle bolts, springs and front suspensions, and the adjustment of steering rods.

Toe Extension—Lowest lift, 4½ in.; highest lift, 15 in. Permits of getting under a broken axle to lift the car high enough to place truck or skids in position for towing.

The Excel Jack is the only jack with sufficient range of action to lift a Ford car to permit the removal of a front suspension.

Excel Weight, 48 lbs... Each, $35.00

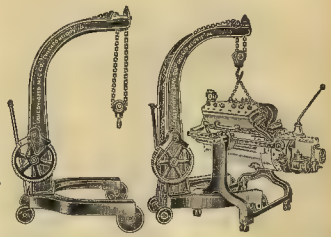
No. 1896—$\frac{1}{16}$ in., 7 in. long. Weight per dozen, 2 lbs. ..... Per dozen, $5.50
One dozen in a box.

CANEDY-OTTO PORTABLE FLOOR CRANE



With the Canedy-Otto Portable Floor Crane, Auto Repair Shops and Machine Shops can do away with the expense of the Overhead Traveling Crane or Chain Blocks. The Canedy-Otto Portable Floor Cranes are suitable for all kinds of heavy lifting, cutting the time lost in handling materials, that counts against production, and in many cases paying for itself very quickly in hundreds of machine shops. No shop can afford to be without a Canedy-Otto Portable Crane. They combine strength and capacity, are everlasting, easy to pull and can do their work far quicker than could a half dozen hands, and are always on the job.

SEWING MACHINES

We guarantee each machine in this line for 10 yrs. Manufactured by one of the oldest and best known makers of sewing machines in the country. Built with every late improvement. These machines are no experiment—they are a perfected product that you can stand back of and know that they will give your trade satisfactory service. When 5 are ordered at a time we will stencil your name on each machine free of charge. **Our prices enable you to meet any competition.**

"PATHFINDER" DROP HEAD STYLE

IN ordering repair parts for sewing machines, serial number, catalogue order number and name of machine must be given.

Short Sewing Machine Needles
1H6945 Short needles. Fit the following sewing machines: New Home, Arlington, New Standard, Liberty, and other of a similar size.
Doz. 28c
Gro. $3.00

Long Sewing Machine Needles
1H6946 Long needles. Fits the following machines: "Honeymoon" and "Pathfinder" and other of a similar size.
Doz. 28c
Gro. $3.00

The "Pathfinder" Sewing Machine is of unequaled quality for the money. It is constructed to meet the demand for a low priced machine of good quality. Will do all kinds of sewing, and will handle material of any thickness.

The sewing head makes the lock stitch, the same as higher grade heads, and has a self-threading shuttle and large, long bobbins. Fitted with automatic bobbin winder.

The tension is located on top of the arm.

Positive and instantly adjustable. All pressure of the tension on the thread may be instantly released by the use of the patent thread liberator. Work may be removed from the machine without danger of breaking the thread or needle.

1H6783—Without Attachments—4 side drawers and large center drawer, light golden oak woodwork. 1 in crate, 118 lbs.
Each, **$31.50**
Lots of 3, " **30.50**

1H6771—With Full Attachments, as above. 1 in crate, 120 lbs.
Each, **34.75**
Lots of 3, " **33.50**

"HONEYMOON" SEWING MACHINES

Compares favorably with the better grade agency machines. Handles wonderful range of work. Anything from the finest of silks to the heaviest of suitings. Simply constructed and has many new labor saving features. Full sized, high arm head. Makes a perfect lock stitch. Has double four-motion type feed. Simple and efficient tension. Self threading shuttle. Stitch can be regulated to run 7 to 24 stitches to the inch. Automatic bobbin winder. The woodwork is a beautiful golden oak design, superior to any other machine in this class. The ornamentation is carved and embossed in elegant design, making this machine a welcome addition to the furniture of any home. The overlapping drawers are full length. Attachments and accessories with each machine.

CHALLENGE WOOD SAWING OUTFITS

NO. 46, ALL WOOD, WITH SWING TABLE, REPLACES NO. 44

HEAVY DUTY

New No. 46 all wood frame is identical with old No. 44, except that it is fitted with slightly heavier mandrel and is reinforced by new steel braces. Frame is constructed of thoroughly seasoned lumber, of the proper size to withstand any strain that can be placed on it in sawing wood; and is securely bolted and braced in every direction.

The shaft is cold rolled steel; and the bearings are cast on a solid iron beam extending the entire length of frame, which holds them in perfect alignment with the shaft at all times. Over the blade we place a substantial shield, to protect the operator against all possibility of being injured.

The table is one of the swing type, pivoted at bottom on a cast bearing.

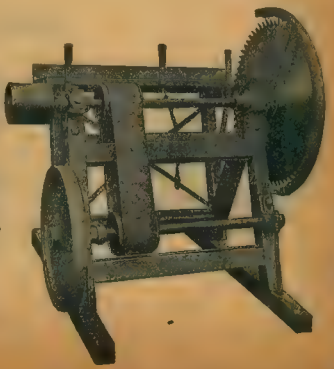
Can be used with saws from 20 inches to 30 inches in diameter. Weight, 300 lbs. Pulley, 6x6. Speed, 1250 R. P. M. Mandrel, 1⅞-inch turned to 1⅝-inch for blade.

No. 46—All wood frame swing table complete with 26-inch blade.

Each ....

NO. 48 WOOD FRAME, WITH SWING TABLE

HEAVY DUTY



Another new outfit that fills a long-felt want for a table that combines all the features of the steel rigs, yet is low in price, as compared to the latter, on account of being made of wood.

Note that it has a tilting table, and at the same time carries balance wheel on separate shaft, allowing of wood or poles being cut in any length desired. This construction also assures the balance and lack of vibration found only in Challenge tables.

Tilting or swing tables are generally conceded to be superior to other styles in ease of operation, and we therefore believe that this new outfit will prove to be one of the most popular members of the Challenge family.

General construction similar to No. 46 Wood Frame Outfit. Can be fitted with blades 18 to 30 inches in diameter. Weight, 285 lbs. Pulley, 6x6. Speed, 1400 R. P. M. Mandrel, 1⅞-inch, turned to 1⅝-inch for blade. Regularly equipped with 26-inch blade.

No. 48—Wood frame swing table complete with 26-inch blade.

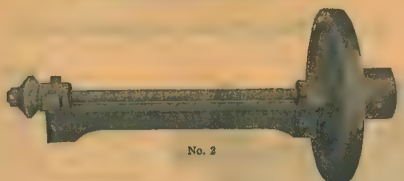
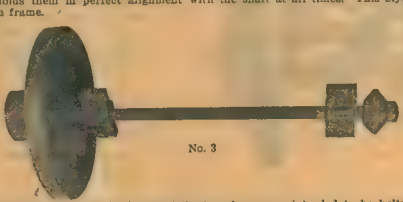
SAW MANDRELS



No. 2

Style 2 consists of a 1¼-inch main shaft, 3 feet 10 inches long, one end fitted with 1⅜-inch arbor and flanges, the other end fitted with a 6x6-inch pulley and heavy balance wheel. The boxes are cast on a solid iron beam extending from saw flanges to balance wheel—which holds them in perfect alignment with the shaft at all times. This style is recommended to parties who wish to build their own frame.



No. 3

No. 3 Saw Mandrel is constructed same as No. 2, except the two boxes are intended to be bolted on a timber or support of some kind and are of the self adjusting type, same as used on our saw frames. This style is especially designed for fastening to frames of trucks, and used in connection with gasoline engines.

Saw Mandrels. No Blades

CROSSCUT SAW BLADES

CURTIS

A saw is a delicate tool. When you stop to think of the thinness of the metal, and the severe work that a saw performs, you can readily understand what we mean when we say that a saw is a delicate tool.

To manufacture a saw that will give satisfaction out of such a thin piece of steel requires a combination of the best talent, widest experience, large facilities, and the most improved methods of production. The makers of our saws have been manufacturing saws and sawmills for over 65 years and the experience thus gained has taught them just how to put into a saw those qualities that make a good blade. They are the only saw manufacturers who have made sawmill machinery, and therefore, have obtained a wider experience than others.

The best steel is used in the manufacture of the saws. The steel is made to their own analysis, selected by repeated tests in their own chemical and physical laboratories. By the use of the latest in heat-recording instruments, they are able to give saws a uniform and tough temper, even to the very points of the teeth.

Every saw, before being shipped, is examined by an expert to see that it has been properly made.

CARBIDE MINERS LAMPS

"SHANKLIN'S"

Equipped with Guy's Patented Water Dropper

The Water Dropper used in the Coal Mine While Experimenting, he Shanklin Miner's Lamp was Invented and Perfected by Frank Guy, an Old Experienced tested out the lamp in the mine in his daily work as "Shot Firer" until he fully worked it out and made it as it is the most accurate and thoroughly reliable water feed that has been devised for acetylene lamps Guy's Dropper is fully covered by United States patents granted May 26, 1914 It has a Lever Feed, which Quickly Regulates the Flow of Water and gives Any Size of Flame that is Wanted. The Dropper will not clog, as the Valve is Self-Cleaning.

Note—All Lamps Carried in Stock at Duluth have the Flat Hook. Wire Hook supplied from Factory at Springfield, Ill.

COLDWELLS MOTOR LAWN MOWERS

COMBINATION ROLLER

MODEL J

Equipped with the latest up-to-date type of motor, transmission and cooling devices. All materials used throughout, workmanship and finish are of the best. The amount of weight on the rollers is just right, which has been determined by years of experience, and it is so simple that the ordinary laboring man can be taught to operate in a few hours.

Guaranteed to do the work of three men with three horse mowers. It is much lighter than any other "ride type" motor lawn mower ever manufactured.

Equipped With 4-Cylinder Continental Motor, Mayo Radiator and Hood and Coldwells Demountable Cutting Unit

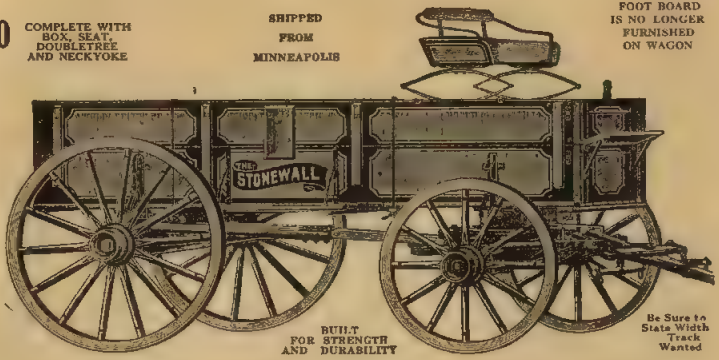
STONEWALL FARM WAGON

$109.50 COMPLETE WITH BOX, SEAT, DOUBLETREE AND NECKYOKE

SHIPPED FROM MINNEAPOLIS

FOOT BOARD IS NO LONGER FURNISHED ON WAGON

EVERY WAGON GUARANTEED BY THE MANUFACTURER AND BY THE HOLMES CO-OPERATIVE CO.



BUILT FOR STRENGTH AND DURABILITY

Be Sure to State Width Track Wanted

Our Stonewall Farm Wagons are constructed of the best of materials by one of the oldest and largest wagon factories in the country, who have a reputation for building wagons of quality that give lasting satisfaction. All timbers entering into the construction of Stonewall Wagons are rigidly inspected at time of purchase, thoroughly seasoned and again inspected before being used. Their superior construction guarantees durability and light draft. These wagons are unsurpassed for quality, durability and light running. Guaranteed to give complete satisfaction under any and all conditions.

AXLES—The axles are constructed from clear, straight-grained No. 1 Rock maple, and guaranteed to carry full capacity of wagon, which is 4000 pounds. The skeins, 3½x10 inches, are set with the proper "gather" to conform to the wheel dish, by automatic machinery

WHEELS—Height 40 and 48 inches. Tires are 3 inches wide by ⅛ inc thick, or 2 inches wide by ⅝ inches thick. The wheels are the life of a wagon, and no expense has been spared to make them the best and longest lived possible. They have just the right amount of dish to stand the greatest strain. The felloes are of especially selected seasoned hardwood. The hubs are made from choicest birch, hub bands are heated and wedged on. Boxings are set in hubs automatically by hydraulic pressure. The spokes are of straight-grain white oak. Tires are extra heavy and set by the latest improved process.

BOX—is made of carefully selected and seasoned materials. Floor is of Washington fir, tongued and grooved. The bottoms are reinforced to prevent the bolsters from wearing the bottom and are supported by six heavy hardwood cleats riveted on sides and end gates; are heavily ironed on top edges. Comstock patent end gates are furnished on all our beds. With each wagon we furnish a 28 inch box, 14 inch lower box and 13 inch top box. Boxes are furnished with steel grain cleats, hold-down rods, anti-spreader chains, and cut under rub irons. Width of box on narrow track wagon is 38 inches; on wide track wagon, 42 inches.

GEAR PARTS—All wood which is used in the gear parts, such as the reach, bolster, bounds and tongue, are made from the best oak and Rock Maple. The doubletrees, singletrees and neckyoke are of tough, clear hickory. The essential point of construction is to combine the greatest strength with the lightest draft possible. Our many customers, who are using the Stonewall Wagons, say that we have the best balanced, easiest running wagon on the market, and we know it is true, for by application of scientific principles we have produced the proper combination of strength and draft. Both front and rear gears are heavily ironed where unusual wear and strain comes.

TONGUE—Tongue is made of the best No. 1 oak, size 4 inches by 2½ inches by 12 feet.

PAINTING—The painting is all hand and brush work. Only the best grade of leads, oils and varnishes are used. All parts are sanded before painting; the gears are painted with pure red lead ground in linseed oil, neatly striped. The bed is dark green, three coats, and striped in panels, as illustration shows.

TRACK—Is the distance on the ground from center to center of tires. Narrow track (4 feet 6 inches) is regular, wide track (5 feet) is generally used south of Rocky Mountain States. When ordering, be sure and specify what track is desired. **Shipped from Minneapolis.**

B-2404—Farm Wagon with 40x48 inch wheels; 2x⅝ inch tires; 3½ by 10 inch cast skeins; 38 inch wagon bed and tongue complete with doubletrees, neckyoke and seat. Price..... $105.50

Each **$8 00**

FLOUR AND FEED GRINDER

Our Mill will not only grind flour and meal, but will also grind your feed for stock purposes. Will grind from six to twenty bushels per hour, requiring from one and one-half to three horse power, depending upon the condition of the grain and fineness of grinding. Can be adjusted for either coarse or fine grinding.

The burrs are 5½ inches in diameter and are made of a special mixture of iron and steel for hardness, long life and durability. They are self aligning and flexible, and can be changed in the mill in about three minutes time.

We furnish regularly with each mill two sets of burrs, one coarse for grinding feed and cracking corn, etc., and one medium for grinding table meal. We also make an extra fine burr for grinding flour, which may be substituted in place of either coarse or medium with regular equipment if desired and so stated.

Two important features, **not to be overlooked,** in this mill, are the **position of the pulley,** and the **positive feeding device.** We have placed the pulley on the **outside** of the mill, which eliminates the necessity of inducing a belt when same is to be used elsewhere. It also allows different size pulleys to be used. The pulley furnished regularly is 6¾-inch diameter, 4½-inch face, and should run from 600 to 1,000 revolutions per minute. If desired we can furnish either of the following size pulleys in place of regular, without extra cost: 8x4-inch, 10x3 or 12x3-inch.

The **sifter or bolting attachment** is made of galvanized steel with very fine bolting screen which is operated by a small cam attached to the main shaft, giving it a back and forth vibration allowing only the fine meal to pass through the screen, and the hulls over the end. It may be attached or detached from the machine by a very simple operation. This attachment has proven to be very successful. See prices for this attachment. Shipped direct to you from Wisconsin factory.

B-9000—	"Superior" Flour, Meal and Feed Grinder without legs, fly wheel and flour sifter, weight 75 pounds	$19.95
B-9002—	Legs, per pair, weight 20 pounds	2.95

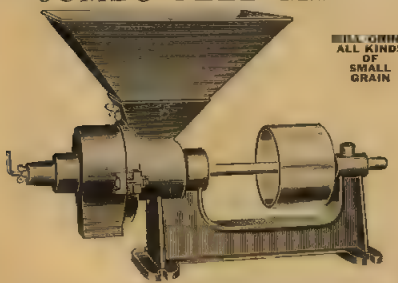
JUMBO FEED MILL



Can Be Furnished With or Without Legs.

Our Jumbo feed mill is constructed of good materials and if fully guaranteed to do all work intended of the same in a very satisfactory manner. It is built entirely of iron and steel and every part is strong enough to resist six times the actual working strain. The bearings are long and lined with a high grade of babbitt and can be oiled while mill is running. The burrs are 6 inches in diameter, ground perfectly true, and made of the hard white iron. Can be adjusted for fine or coarse grinding while running. The Jumbo will grind shelled corn, wheat, oats, spelts, barley, rye and all kinds of small grain, separately or mixed grain. All mills shipped with two sets of burrs, one fine and one coarse set. Capacity as follows:

Pulley, 7 inches diameter, 4-inch face. **Capacity**—5 to 8 bushels per hour with 1½ h. p. engine; 8 to 12 bushels per hour with 2 h. p. engine; 10 to 18 bushels per hour with 3 h. p. engine, 15 to 22 bushels per hour with 4 h. p. engine. **Speed**—about 150 revolutions per minute with 1½ h. p. engine; 200 revolutions per minute with 2 h. p. engine; 300 revolutions per minute with 3 h. p. engine, 400 revolutions per minute with 4 h. p. engine. Shipping weight about 85 pounds. Shipped from Iowa factory.

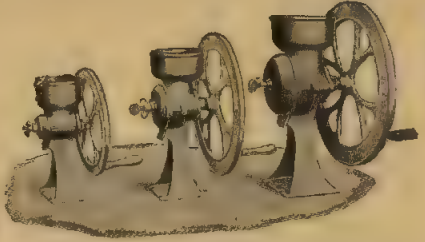
SMITH HAND GRIST MILLS



Smith Mills are strong and durable and for use where a small quantity of grinding is to be done they cannot be equalled. All mills are adjustable to grind either fine or coarse. Will grind all kinds of small grain, coffee, salt, dry bones or dry shells. Made in three sizes. The small size is suitable for use in the kitchen for grinding coffee, cracking corn or for a small flock of poultry. The second size is considerably larger and has large capacity, and the heavy balance wheel enables the grinding to be done proportionately easier. The largest size is almost equal to a small power mill and will easily do the grinding for several head of stock. Each mill is packed in a wooden box for shipment. Shipped from Wisconsin factory.

B-2282—	Small Grist Mill, weight 25 pounds	$3.25
B-2283—	Extra burrs, small size	.80

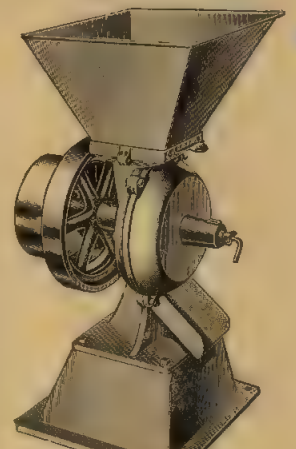
REX SMALL GRAIN MILL

MADE IN TWO SIZES

$22.25 AND **$30.75**

TWO SETS BURRS AND BALANCE WHEEL ARE FURNISHED WITH EACH MILL.



The Rex Small Grain Feed Mills are built entirely of iron and steel. All parts are extra heavy and strong enough to resist six times the actual strain of grinding. These mills will grind all kinds of small grain separately or mixed. The bearings are the anti-friction ball bearings with end thrust; they are extra long and lined with a high grade of babbitt and are conveniently oiled while mill is running. The flow of grain to the burrs is regulated by opening or closing slide in bottom of hopper. The auger force feed insures the mill against clogging. The grinding burrs are harder than the hardest tempered steel. They are made of a special mixture of the very hardest of iron and steel and are most durable. All mills shipped with Balance wheel and two sets burrs, one set coarse, one set fine. Shipped direct to you from Iowa factory.

Size	No. H. P. Required	Diam. of Burrs	Size of Pulley	Speed Required per Hour	Capacity per Hour	Weight

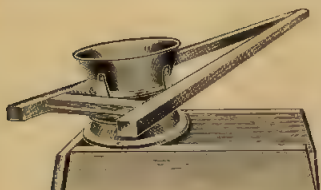
Daisy Triple Geared Sweep Mill

ENCLOSED GEAR STRONG AND DURABLE. GEARED 3 TO 1. BEARINGS RUN IN OIL.

The Daisy Feed Mill is geared three to one, making it exceptionally light draft and large capacity. Owing to its construction, friction is reduced to a minimum. Guaranteed to run as light as any make of geared mill with same capacity, also guaranteed against defects in material or workmanship for a period of five years. The gearing on the Daisy Mill is of the straight spur gear pattern. Speeded three to one, making three revolutions to each round of the team. Gears are enclosed, insuring against accidents of any kind. Perfect oiling system insures keeping of bearings well supplied with oil. The burrs are constructed from the best grade of material and the construction could not possibly be improved upon. Burrs—We can supply either coarse or fine burrs with this mill, when ordered. Unless specified in order, coarse burrs are shipped. These burrs will give good service until entirely worn out. They being the important feature of any mill, it is well to note carefully the material out of which the burrs in a feed grinder are made. Burrs are 50 inches in circumference. The Hopper is made of extra heavy galvanized steel and will not rust out like the hoppers in the low priced mills on the market. The capacity of the Daisy Mill—Grinds from 30 to 45 bushels per hour of shelled corn with all-purpose burrs and 15 to 20 bushels per hour of small grain with the fine burrs. The capacity of any mill will naturally depend upon the fineness of the grain and the speed of the team. This has an exceptionally large capacity for a mill of this kind. Light draft and easy to operate and nothing to get out of order. We do not guarantee capacity when grinding oats alone. The woodwork is of the best grade of material for this purpose, substantially constructed from start to finish, regular mounting, giving plenty of clearance below mill so that a good sized basket can be used, and it does away with lots of time in shoveling. Shipped complete with one set of burrs, platform, sweep and hopper already set up ready for use. Shipped from factory in Central Iowa.

B-2020—Daisy Triple Geared Sweep Mill; weight 635 pounds. Price **$46.95**
B-2021—Extra Burrs, either Coarse or Fine. Price **11.95**

Northern Junior Sweep Feed Mill



MADE IN TWO SIZES FOR ONE AND TWO HORSES.

The Northern Junior or one-horse mill and the Senior or two-horse mill are made in two sizes and are guaranteed to give complete satisfaction in every way. The Northern Junior is the best one-horse feed mill on the market. It is especially adapted for grinding ear corn for stock, also shelled corn, oats and small grains of every kind. Hopper is large and made of heavy steel. Sweep is made of heavy selected hardwood, and well braced. Box is heavy and make mill hold firmly so that substantial **Directions:** Fasten mill to box with lag screws, all strain of grinding will be on pull braces furnished with each mill and no strain on box. How to regulate burrs for coarse and fine grinding will be sent with each mill. Dry shelled corn is the best kind of grain to start a mill with. The Outside Shell is more perpendicular than cone, which leaves space at top open to receive ears. Blades on inner wall of shell are arranged to match those on cone.

The Burrs are 16 inches in diameter, made of very hardest white iron and is more lasting than tempered steel. A set will grind from 2,000 to 5,000 bushels before wearing out, and can be cheaply replaced, making the mill as good as new as there are no other parts liable to wear or break. One set of burrs is furnished with each mill, and we always send coarse unless fine is ordered. Do not attempt to grind ear corn with fine burrs, or expect to grind fine with coarse burrs. Capacity per hour: Ear corn (70 lbs. to bushel) 8 to 10 bushels; shell corn, 10 to 12 bushels; kaffir corn and small grades, 5 to 8 bushels. Weight, 270 pounds.

B-2022—Northern Junior, with one set of coarse burrs (unless fine are specified) F. O. B. Iowa Factory. Price **$24.95**
B-2023—Extra Burrs, per pair, coarse or fine **4.80**

Northern Senior Two Horse Mill. Same general description as the Junior Mill only larger. The Burrs are 24 inches in diameter. Capacity per hour: Ear corn (70 lbs. to the bushel) 30 to 40, shelled corn, 35 to 50 bushels; small grain, 10 to 20 bushels. Shipped from Iowa factory.

B-2024—Northern Senior 2-horse mill with one set of coarse or fine burrs as ordered. Weight 580 pounds. Price **$35.50**
B-2025—Extra Burrs, per pair, coarse or fine **5.25**

Climax Small Grain Mill

CO-OPERATOR'S PRICE

$8.65

REQUIRES FROM 1½ TO 4 H. P.

GRINDS ALL KINDS OF SMALL GRAIN.

This mill is unexcelled for small power, requires but from 1½ to 4 horsepower, takes up but small space and especially desirable for grinding all kinds of grain such as shelled corn, wheat, oats, rye, barley, etc.

The main frame is cast in one piece and is heavy and strong. The bearings are extra long and lined with a good grade of babbitt metal. The shaft is 15-16 inch cold roll steel. The grain is carried from the bottom of the hopper by a conveyor worm which insures a steady and even feed. The burrs are made from a special mixture of metals which is harder than tempered steel and are 5½ inches in diameter. Burrs can be adjusted for either coarse or fine grinding while the mill is running. Has a capacity of from 8 to 20 bushels per hour and should be run at from 150 to 600 revolutions per minute. Capacity of mill depends on the condition of the grain and the speed that the mill is run. Unless otherwise ordered, we furnish a pulley 12 inches in diameter with 3 inch face, but can furnish 10x3 inch or 8x4 inch if so desired. One pair of fine and one pair of coarse burrs shipped. Weight of mill, 65 pounds. Shipped from factory in central Iowa.

B-2026—Climax Mill with two pairs of Burrs **$8.65**
Extra Burrs, per pair **1.10**
Sixteen-pound balance wheel, extra **1.60**
Cast iron sub-base 13x13x6 inches high, extra **2.20**

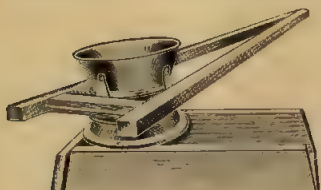
Daisy Triple Geared Sweep Mill

ENCLOSED GEAR STRONG AND DURABLE. GEARED 3 TO 1. BEARINGS RUN IN OIL.

The Daisy Feed Mill is geared three to one, making it exceptionally light draft and large capacity. Owing to its construction, friction is reduced to a minimum. Guaranteed to run as light as any make of geared mill with same capacity, also guaranteed against defects in material or workmanship for a period of five years. They being the important feature of any mill, it is well to note carefully the material out of which the burrs in a feed grinder are made. Burrs are 50 inches in circumference. The Hopper is made of extra heavy galvanized steel and will not rust out like the hoppers in the low priced mills on the market. The capacity of the Daisy Mill—Grinds from 30 to 45 bushels per hour of shelled corn with all-purpose burrs and 15 to 20 bushels per hour of small grain with the fine burrs. The capacity of any mill will naturally depend upon the fineness of the grain and the speed of the team. This has an exceptionally large capacity for a mill of this kind. Light draft and easy to operate and nothing to get out of order. We do not guarantee capacity when grinding oats alone. The woodwork is of the best grade of material for this purpose, substantially constructed from start to finish, regular mounting, giving plenty of clearance below mill so that a good sized basket can be used, and it does away with lots of time in shoveling. Shipped complete with one set of burrs, platform, sweep and hopper already set up ready for use. Shipped from factory in Central Iowa.

B-2020—Daisy Triple Geared Sweep Mill; weight 635 pounds. Price **$46.95**
B-2021—Extra Burrs, either Coarse or Fine. Price **11.95**

Northern Junior Sweep Feed Mill



MADE IN TWO SIZES FOR ONE AND TWO HORSES.

The Northern Junior or one-horse mill and the Senior or two-horse mill are made in two sizes and are guaranteed to give complete satisfaction in every way. The Northern Junior is the best one-horse feed mill on the market. It is especially adapted for grinding ear corn for stock, also shelled corn, oats and small grains of every kind. Hopper is large and made of heavy steel. Sweep is made of heavy selected hardwood, and well braced. Box is heavy and make mill hold firmly so that substantial **Directions:** Fasten mill to box with lag screws, all strain of grinding will be on pull braces furnished with each mill and no strain on box. How to regulate burrs for coarse and fine grinding will be sent with each mill. Dry shelled corn is the best kind of grain to start a mill with. The Outside Shell is more perpendicular than cone, which leaves space at top open to receive ears. Blades on inner wall of shell are arranged to match those on cone.

The Burrs are 16 inches in diameter, made of very hardest white iron and is more lasting than tempered steel. A set will grind from 2,000 to 5,000 bushels before wearing out, and can be cheaply replaced, making the mill as good as new as there are no other parts liable to wear or break. One set of burrs is furnished with each mill, and we always send coarse unless fine is ordered. Do not attempt to grind ear corn with fine burrs, or expect to grind fine with coarse burrs. Capacity per hour: Ear corn (70 lbs. to bushel) 8 to 10 bushels; shell corn, 10 to 12 bushels; kaffir corn and small grades, 5 to 8 bushels. Weight, 270 pounds.

B-2022—Northern Junior, with one set of coarse burrs (unless fine are specified) F. O. B. Iowa Factory. Price **$24.95**
B-2023—Extra Burrs, per pair, coarse or fine **4.80**

Northern Senior Two Horse Mill. Same general description as the Junior Mill only larger. The Burrs are 24 inches in diameter. Capacity per hour: Ear corn (70 lbs. to the bushel) 30 to 40, shelled corn, 35 to 50 bushels; small grain, 10 to 20 bushels. Shipped from Iowa factory.

B-2024—Northern Senior 2-horse mill with one set of coarse or fine burrs as ordered. Weight 580 pounds. Price **$35.50**
B-2025—Extra Burrs, per pair, coarse or fine **5.25**

Climax Small Grain Mill

CO-OPERATOR'S PRICE

$8.65

REQUIRES FROM 1½ TO 4 H. P.

GRINDS ALL KINDS OF SMALL GRAIN.

This mill is unexcelled for small power, requires but from 1½ to 4 horsepower, takes up but small space and especially desirable for grinding all kinds of grain such as shelled corn, wheat, oats, rye, barley, etc.

The main frame is cast in one piece and is heavy and strong. The bearings are extra long and lined with a good grade of babbitt metal. The shaft is 15-16 inch cold roll steel. The grain is carried from the bottom of the hopper by a conveyor worm which insures a steady and even feed. The burrs are made from a special mixture of metals which is harder than tempered steel and are 5½ inches in diameter. Burrs can be adjusted for either coarse or fine grinding while the mill is running. Has a capacity of from 8 to 20 bushels per hour and should be run at from 150 to 600 revolutions per minute. Capacity of mill depends on the condition of the grain and the speed that the mill is run. Unless otherwise ordered, we furnish a pulley 12 inches in diameter with 3 inch face, but can furnish 10x3 inch or 8x4 inch if so desired. One pair of fine and one pair of coarse burrs shipped. Weight of mill, 65 pounds. Shipped from factory in central Iowa.

B-2026—Climax Mill with two pairs of Burrs **$8.65**
Extra Burrs, per pair **1.10**
Sixteen-pound balance wheel, extra **1.60**
Cast iron sub-base 13x13x6 inches high, extra **2.20**

FLOUR AND FEED GRINDER

Our Mill will not only grind flour and meal, but will also grind your feed for stock purposes. Will grind from six to twenty bushels per hour, requiring from one and one-half to three horse power, depending upon the condition of the grain and fineness of grinding. Can be adjusted for either coarse or fine grinding.

The burrs are 5½ inches in diameter and are made of a special mixture of iron and steel for hardness, long life and durability. They are self aligning and flexible, and can be changed in the mill in about three minutes time.

We furnish regularly with each mill two sets of burrs, one coarse for grinding feed and cracking corn, etc., and one medium for grinding table meal. We also make an extra fine burr for grinding flour, which may be substituted in place of either coarse or medium with regular equipment if desired and so stated.

Two important features, **not to be overlooked,** in this mill, are the **position of the pulley,** and the **positive feeding device.** We have placed the pulley on the **outside** of the mill, which eliminates the necessity of inducing a belt when same is to be used elsewhere. It also allows different size pulleys to be used. The pulley furnished regularly is 6¾-inch diameter, 4½-inch face, and should run from 600 to 1,000 revolutions per minute. If desired we can furnish either of the following size pulleys in place of regular, without extra cost: 8x4-inch, 10x3 or 12x3-inch.

The **sifter or bolting attachment** is made of galvanized steel with very fine bolting screen which is operated by a small cam attached to the main shaft, giving it a back and forth vibration allowing only the fine meal to pass through the screen, and the hulls over the end. It may be attached or detached from the machine by a very simple operation. This attachment has proven to be very successful. See prices for this attachment. Shipped direct to you from Wisconsin factory.

B-9000—	"Superior" Flour, Meal and Feed Grinder without legs, fly wheel and flour sifter, weight 75 pounds	$19.95

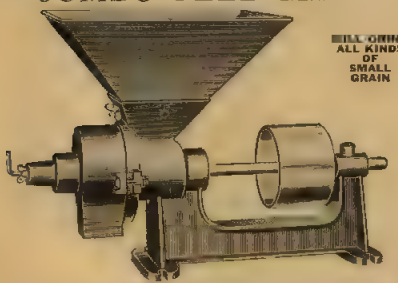
JUMBO FEED MILL



Can Be Furnished With or Without Legs.

Our Jumbo feed mill is constructed of good materials and if fully guaranteed to do all work intended of the same in a very satisfactory manner. It is built entirely of iron and steel and every part is strong enough to resist six times the actual working strain. The bearings are long and lined with a high grade of babbitt and can be oiled while mill is running. The burrs are 6 inches in diameter, ground perfectly true, and made of the hard white iron. Can be adjusted for fine or coarse grinding while running. The Jumbo will grind shelled corn, wheat, oats, spelts, barley, rye and all kinds of small grain, separately or mixed grain. All mills shipped with two sets of burrs, one fine and one coarse set. Capacity as follows:

Pulley, 7 inches diameter, 4-inch face. **Capacity**—5 to 8 bushels per hour with 1½ h. p. engine; 8 to 12 bushels per hour with 2 h. p. engine; 10 to 18 bushels per hour with 3 h. p. engine, 15 to 22 bushels per hour with 4 h. p. engine. **Speed**—about 150 revolutions per minute with 1½ h. p. engine; 200 revolutions per minute with 2 h. p. engine; 300 revolutions per minute with 3 h. p. engine, 400 revolutions per minute with 4 h. p. engine. Shipping weight about 85 pounds. Shipped from Iowa factory.

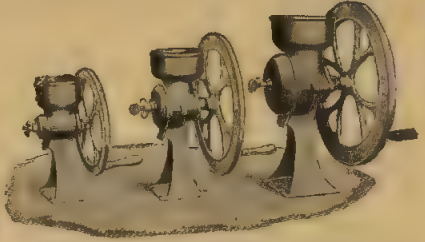
SMITH HAND GRIST MILLS



Smith Mills are strong and durable and for use where a small quantity of grinding is to be done they cannot be equalled. All mills are adjustable to grind either fine or coarse. Will grind all kinds of small grain, coffee, salt, dry bones or dry shells. Made in three sizes. The small size is suitable for use in the kitchen for grinding coffee, cracking corn or for a small flock of poultry. The second size is considerably larger and has large capacity, and the heavy balance wheel enables the grinding to be done proportionately easier. The largest size is almost equal to a small power mill and will easily do the grinding for several head of stock. Each mill is packed in a wooden box for shipment. Shipped from Wisconsin factory.

B-2282—	Small Grist Mill, weight 25 pounds	$3.25
B-2283—	Extra burrs, small size	.80
B-2284—	Medium Grist Mill, weight 50 pounds	6.20

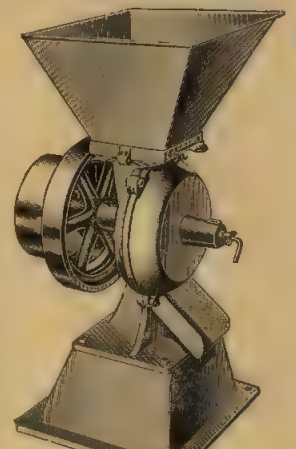
B-2287—	Extra Burrs, large size	1.45

REX SMALL GRAIN MILL

MADE IN TWO SIZES

$22.25 AND **$30.75**

TWO SETS BURRS AND BALANCE WHEEL ARE FURNISHED WITH EACH MILL.



The Rex Small Grain Feed Mills are built entirely of iron and steel. All parts are extra heavy and strong enough to resist six times the actual strain of grinding. These mills will grind all kinds of small grain separately or mixed. The bearings are the anti-friction ball bearings with end thrust; they are extra long and lined with a high grade of babbitt and are conveniently oiled while mill is running. The flow of grain to the burrs is regulated by opening or closing slide in bottom of hopper. The auger force feed insures the mill against clogging. The grinding burrs are harder than the hardest tempered steel. They are made of a special mixture of the very hardest of iron and steel and are most durable. All mills shipped with Balance wheel and two sets burrs, one set coarse, one set fine. Shipped direct to you from Iowa factory.

THE DAZEY PRINCIPLE

BUTTER-MAKING PROPERTIES OF CREAM. The principal butter making property of cream is butterfat which is an oil contained in a tissue or skin known as fat globules and best compared to a soft shell egg. There are millions of these tiny globules in a single drop of cream.

OLD METHOD. The principle of the ordinary churn is to break these globules, allowing time for to rise and gather at the surface of the cream resulting in salvy butter therefore it stands to reason that the more scientific way would be to remove these globules in their natural state. DAZEY CHURNS were constructed with this object in view.

THE DAZEY METHOD. The powerful DAZEY turbine dasher in connection with the square receptacle produces a thorough and scientific agitation which bunds up into dry uniform grains about the size of rice all the butter making properties of the cream without disturbing their natural state. This method produces more and better butter in six to fifteen minutes time.

SANITARY FEATURES. The receptacles are non absorbent, no cracks to harbor the cream and become rancid as with a great many churns, therefore perfectly sanitary. The receptacles are light and as easily washed as any kitchen utensil. May be turned without warping of the seams opening up.

TIME AND LABOR SAVING FEATURES. DAZEY CHURNS turn easy and will positively produce the highest grade of butter in six to fifteen minutes. Eliminates the necessity of working the butter for the reason that during the building up of the grains the milk is squeezed to the surface and when the grains have been washed in the churn as per direction (included with each churn) the butter is then ready to salt and mould.

The receptacle and dasher are easily removed from the churn and may be taken to any convenient place for washing or scalding

DAZEY CHURNS

Any churn will agitate and make butter, but the Dazey is the only one that produces butter in its natural condition. In place of breaking the delicate tissues in which the butter fat or oil is contained, and bringing this into a mass, the Dazey drives the cream across the slanting wings and tenderly rolls the tiny globules in their natural condition into grains about the size of rice. During this building-up process the casein and other butter making properties in cream, usually lost with other churns, sticks to and rolls up with the butter globules, which is the reason the Dazey makes more butter. The hard uniform size grains during this building-up process have squeezed out all the milk, therefore to wash off outside of grains is all that is necessary, which absolutely does away with butter-working.

The Dazey Churn

THE MARKET'S BEST CHURNS

The "Dazey" is an entirely new [illegible] Dairy Churn construction. It is built on a scientific principle of butter-making with remarkable labor-saving and sanitary features.

The "Dazey" brings out the butter-making properties of the cream, therefore obtaining the greatest quantity of butter—just like the big creameries.

The receptacles of the "Dazey" [illegible] are sanitary and light to handle, and [illegible] the most serious objection to the old wooden churns ordinarily used.

Feature these churns in your store and realize good profits

T7278-80

Will make 2 lbs. of milk charged butter from 1 lb. butter and 1 pt. milk, Turbine style, extra heavy clear glass jar, steel screw cap, beaded [illegible], 1 pc. cast iron frame, gears carefully fitted, double nickel coated finish, wood handled, steel dash rod retinned, white maple dashers. Full instructions with each churn. ⅓ doz. in crate.

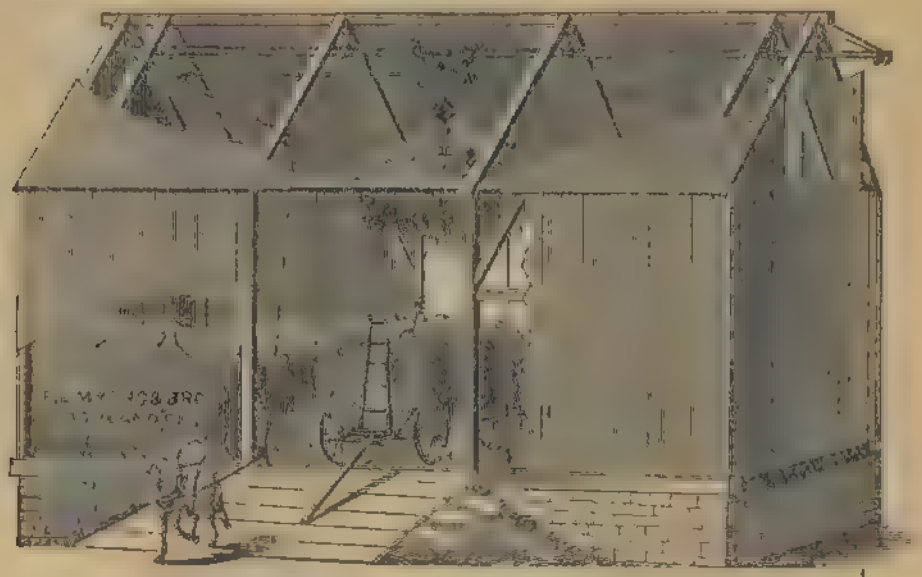
DIRECTIONS FOR ERECTING HAY CARRIERS AND FIXTURES

Illustrating How Track Should Be Placed in Barn, Also Rope Stop, and How Pulley Should Be Placed



Place pulley to draw the carrier back into the mow directly under and in line with track, and not as seen in cut. Do not allow steel track hanging hooks to project below casting under track through which they are screwed, as they will interfere with the carrier. The top illustration shows how track should be put up and how rope is tied from one rafter to the other close under the track to make stop for carrier at end of barn. Also shows how rafter brackets are placed.

DIRECTIONS FOR ERECTING PATENT STEEL TRACK

Scaffold by placing rope from rafter to rafter, about 6 feet from ridge pole or peak and about 10 feet apart. Place ladder across ropes with board to stand on. Nail one rafter bracket at each end of barn, then draw a line from one end to the other and stretch tight. All rafter brackets should be raised even with this line. The track can then be put up in sections.

MATERIAL REQUIRED FOR A STEEL TRACK OUTFIT FOR DIFFERENT LENGTH BARNS

For a 40-foot barn—One hay unloader; 36 feet steel track; 19 hanging hooks; 19 rafter brackets; 5 knot passing pulleys; 1 fork or 3 slings; 6 floor hooks, 110 feet ¾-inch Manila rope, 50 feet ⅜-inch check rope, 40 feet ⅜ inch reverse rope.

For a 50-foot barn—One hay unloader, 48 feet steel track; 25 hanging hooks; 25 rafter brackets; 5 knot passing pulleys; 1 fork or 3 slings; 6 floor hooks, 170 feet ¾-inch Manila rope, 55 feet ⅜ inch check rope, 50 feet ⅜-inch reverse rope.

For a 60-foot barn—One hay unloader, 54 feet steel track; 28 hanging hooks; 28 rafter brackets; 5 knot passing pulleys; 1 fork or 3 slings; 6 floor hooks, 190 feet ¾-inch Manila rope; 60 feet ⅜ inch check rope; 60 feet ⅜ inch reverse rope.

For a 70-foot barn—Hay unloader, 66 feet of track, 34 hanging hooks, 3½ lbs. bracket nails, 5 knot passing pulleys, 1 fork, or 3 slings, 6 floor hooks, 190 feet ¾-inch draft rope; 70 feet ⅜-inch check rope, 70 feet ⅜ inch reverse rope.

For an 80-foot barn—Hay unloader, 78 feet of track, 40 hanging hooks, 40 rafter brackets, 4 lbs. bracket nails, 5 knot passing pulleys; 1 fork, or 3 slings, 6 floor hooks, 210 feet ¾-inch draft rope, 80 feet ⅜-inch check rope, 80 feet ⅜ inch reverse rope.

Different lengths of barns will use track, hanging hooks and ropes in same ratio as above.

If required to take hay in at one end of barn, and have rope pass down at far end to horse, same amount of draft rope. If draft rope be returned to same end of barn and then down, this requires about one fourth more draft rope.

HOW TO REVERSE CARRIER

Set fork in hay. Tie ends of rope together to which horse and weight are attached. Pull on small rope until knot comes to the floor, then untie ropes. Fasten weight G on small rope, change pulley A to floor hook H. This reverses carrier for opposite direction without leaving the floor or climbing up. Use all knot passing pulleys. For taking in hay at end of barn use V-shaped brace for track support as illustrated.

WHEELBARROW GRASS SEEDERS
THOMPSONS ROYAL CHAIN FEED

An accurate and economical machine for sowing clover, timothy, alfalfa and other small seeds broadcast. Run easily and sow evenly in windy weather.

The quantity of seed sown is accurately governed by the wheel, which moves correspondingly slow or fast as the machine runs over the ground. This seeder is constructed on up-to date principles. It has a strong steel wheel 32 inches in diameter, with an inch and a quarter by one-quarter inch steel tire, is operated by a device that engages the wheel close to the hub, having a lever and working correspondingly easy. It is instantly thrown out of gear, and the amount of seed sown is quickly governed by changing the pin in the index plate as thereon indicated. This seeder does not injure or bunch the seed, but evenly distributes it the full length of the hopper. We realize that we have competition in other kinds of seeders, but we believe that for a good-looking, nicely-finished, first-class wheelbarrow grass seeder, our machine is far ahead of them all.

HAND CORN AND POTATO PLANTERS

NO. 1 TRIUMPH

NO. 2 TRIUMPH

SEGMENT

EUREKA

No. 1 Triumph is especially adapted to planting corn while the No. 2 Triumph will plant corn and pumpkin seeds. Built very strong with smooth, positive-working steel stampings. Do not crack the corn.

Segment Automatic Corn and Pumpkin Seed Planters work very rapid and perfect. Stamped steel slide, galvanized iron hopper and hardwood handles. Adjustable for number of kernels running in segmental steel track.

The Eureka Potato Planter is all steel. Equipped with an adjustable depth gauge. The jaws lock automatically without the aid of a spring when withdrawn from the soil.

"See Those Guns!"

This Hardware store knows how to "hunt" for Fall trade—they know how to display rifles and shotguns so that sportsmen will be sure to *notice* them. What

"DULUTH" Display Shelving

does for this store it will do for your store—*show* and *sell* the goods.

Not only display sporting goods to the best possible advantage, but other Hardware as well.

Because "Duluth" Sectional Display Shelving is made by specialists who have made a special study of both Hardware and Hardware *stores* and then built Fixtures to fit the Hardware business.

Built them on the Unit System so that extra sections can be quickly and easily added at any time—built them *right*.

And the cost is so reasonable that the small dealer can well afford to install them

Send for catalog and full particulars.

"ECLIPSE" PORTABLE ELEVATOR AND GRAIN DUMP

$175.00

DIRECT FROM FACTORY TO YOU

CAN BE FURNISHED 24 FEET OR LONGER

CAN BE RUN BY HORSE OR ENGINE POWER

OPEN TELESCOPE SPOUTE IS EXTRA. NOTE PRICES.

Guaranteed to do Perfect Work in Handling Corn, Shelled Corn, Flax Seed, Wheat or all small Grain, Dirt, Crushed Rock, etc.

The Eclipse Portable Grain Elevator and Grain Dump is constructed by experienced workmen and is fully guaranteed to do the work intended for same in a satisfactory manner, and the factory manufacturing same and ourselves hereby agree to replace any part or parts which may prove defective on account of poor material or workmanship.

ELEVATOR IS MOUNTED ALWAYS READY FOR TRANSPORTATION

THE FRAME OF ELEVATOR IS OF WOOD.

The Eclipse Elevator is always ready for use as we do not use a bolster, our front wheels with tongue and axle are hooked into a ring which is fastened to the boot end of the elevator. This forms a cushion hitch and can be turned around in a very small space. Our windlass for raising the elevator is fastened to the elevator proper in place of the derrick or truck, hence the raising feature is still maintained should circumstances necessitate removal of the trucks and derrick which is often necessary when the user wishes to elevate into a back bin or in a driveway or because of overhead timber the derrick can not be raised. In this case our trucks and hoisting derrick can be removed by loosening two bolts. The hoisting rope can be attached somewhere to a rafter or overhead timber and the elevator raised to its desired height by the same reel as if the derrick was attached.

No portable elevator is complete to meet all circumstances found by the average users unless this feature is incorporated in the construction. This is an exclusive feature with it and helps to make it a leader in its class and has been adopted after studying the requirements of its many

Our new Improved Screw Hoist Derrick, which is fool proof, for the horse or gas engine, raises and lowers a wagon so there is no chance to let the wagon fall in raising, as the screw hoist holds the wagon at any point it stops, and this stops all breakage. It is the finest thing that ever been put on a wagon jack.

You can see from the cut of the screw hoist that the speed jack is connected to it and does not go with the outfit only when speed jack is ordered for gas engines to operate the outfit, and then the horse power is left out and speed jack is put on the wagon jack, which makes a neat, handy job.

Note the Simplicity and neatness of construction. The bottoms of both the trough and return are made up of strips covered with sheet steel, insuring against warping or heaving out of shape, thereby causing an uneven surface. The bottoms are held in place by tie rods. The chain runs on wood ways and is attached to the center of the steel flights from riding over the contents.

The Wood Ways lessen the wear of the chain, causing the chain to wear twice as long as if run over metal. The ways can easily be replaced, should it be required after long usage. The hoisting derrick raises automatically as the operator begins to wind on the reel. After the derrick is in its erect position the elevator starts on its proper adjustment, hence the derrick and elevator are raised by one operation, while in most other machines two operations are required.

Double Geared Horse Power. If you do not have a gas engine and intend to use horse power you will be obliged to use a horse power and we would suggest that you purchase our double geared horse power which has been especially made for operating a portable elevator. The speed is just right for driving the elevator to best advantage. As couplings are furnished with the outfit you can, when so desired, use this horse power for running any other kind of machinery which does not require more than two horses to operate. A great many sweep powers used with elevators are strong enough where you do not use the horses in front of conveyor, but as you may build a stronger one at some time in the future it is well to have a power which you know can be depended upon to do the work at all times.

Illustration shows our Improved Screw Hoist Derrick or Wagon Jack.

The Elevator Proper as regularly furnished is 24 ft. long and measures 14 in. wide. It has strong, durable metal which we absolutely guarantee to be grain tight. The return bottom is also grain tight, and the close-fitting connection at the bottom where the tilting hopper attaches is so arranged that it will spill less oats or small grain than any other elevator we have yet seen. Special attention has been given to that feature and we know it will please you. An elevator will work at about two thirds the length, that is, a twenty-four foot machine will elevate sixteen feet to the upper end where the grain is discharged into the bin. If the spout is used do not overlook the fact that it must have sufficient slant for the corn or grain to slide through it freely.

Horizontal Conveyor—In some instances it is necessary to elevate the material into the gable end of a building and from there conducting it the entire length of the building, discharging at different places along the line. Our Horizontal Conveyor meets this requirement, which consists of a regular portable elevator and a horizontal Drag or Conveyor. We call special attention to the connection of the elevator to the inside horizontal Conveyor. The horizontal Conveyor is a separate detachable part and after once fastened in position need not be taken down in connecting or disconnecting the elevator part, therefore is always stored away when not in use, without handling. The elevator can be simply raised with our windlass so that the discharging end is directly over the horizontal Drag hopper, then by putting in two bolts the connection is complete.

Telescope Spouts. Meets all Requirements for Spouting either Small Grain or Corn—This spout has become very popular with its many users as it meets with all requirements for spouting either small grain or corn. It can be turned at an angle; hence the discharge end of the elevator or independent section to the center of the crib one can fill the entire crib with one setting and in most places takes the place of a crib conveyer.

In determining the length of spout needed, measure from the point of discharge and within a few feet from the further point to which the grain is to be discharged from the spout.

SPEED JACK—Operating with Gas Engine necessitates the Use of a Speed Jack. We build a speed Jack to run the elevator by gasoline engine or such motive power other than horse power. This Speed Jack is constructed with a throw out Clutch so that the operator need not stop the gasoline engine between loads. This is is a great feature in Speed Jacks. In ordering a Speed Jack, always be sure to state the size and speed of pulley from which it is to be run.

Illustration of Engine Speed Jack, showing Clutch and Lever for stopping Elevator without stopping Engine, thus costs Extra. Note Prices.

We have illustrated our outfits running by horse power, but equally as well can they be run by other motive power, such as gas engines. The way this is done is simply to attach the tumbling rod that is attached to the power to a speed jack and belt the jack to the engine. In this case only a short tumbling rod is necessary. We can furnish speed jacks with our elevator outfits when desired. In ordering this Elevator it is important to know what length of elevator is wanted to reach the desired height. Our Elevator, like all others of its class, will elevate two-thirds its length—that is 24 foot elevator will elevate 16 feet to the upper end where discharged, into the spout or bin. This does not mean that the discharging end of the spout is 16 feet from the ground; allowance must be made for giving the spout the necessary slant to have the grain slide freely. Our standard elevator is 24 feet long, not including the tilting feeder which goes with every elevator. Any length divisible by 4 can be furnished after the first 16 feet, as the first section containing the tilting feeder is 16 feet long—that is, you can have an elevator 20, 24, 28, 32 feet long and so on.

Our Eclipse Portable Elevator and Wagon Dump consists of one 24 foot elevator mounted on a four wheel truck with self contained hoisting derrick, receiving hopper, wagon jack, pulleys, couplings, rope, etc. with tumbling rod and couplings when horse power is furnished, but engine speed jack is furnished only at an extra charge. If you desire to use some other horse power remember the drive shaft in the elevator should make about 100 revolutions per minute so that any horse power making from 24 to 40 revolutions to one round of the horses can be used successfully. Shipped direct to you from our St. Louis factory.

B-2837	Eclipse, 24 foot elevator mounted on 4-wheel truck, complete with Wagon Jack Derrick and New Improved Screw Hoist. Shipping weight 1450 lbs. Price	$175.00
B-2838	2-horse power, double geared. Price	45.50
B-2839	Speed jack attached to wagon jack for gasoline power, extra	12.50
B-2840	Independent Speed Jack	12.00
B-2841	Open Telescope Spout, per foot	1.54
B-2842	Extra Elevator Sections, after the first 24 feet, per foot	2 90
B-2843	Extra Roof Sections, per foot	2 90

THE "MAJESTIC" GRAIN DISC DRILL

MADE WITH AND WITHOUT FERTILIZER ATTACHMENT. HAS DOUBLE RUN FORCE FEED.

THE FRAME is built of one continuous steel pipe, 1¼ inch, bent at the corners and connected in the rear by cross bar with heavy fittings. THE AXLE is of continuous cold rolled steel, 8 to 12 discs are of 1 5-16 inch; 14 to 22 discs, 1 3-8 inch. STEEL WHEELS. The wheels are made extra strong of heavy steel; are 42 inches high, with 3 inch tire up to 14 disc, and 4 inch tire on 16 to 22 disc, with ratchet plate on the inside of wheel next to the axle box, making a solid base for the hub, rigidly attached to the axle. FEED REGULATOR. The quantity of grain is changed by our Majestic Speed Disc and the sliding pinion which meshes accurately in various rows of cogs on the speed disc. By means of shifting lever the change in quantity of grain may be made without raising the discs out of the ground but when they are raised the feeds stop simultaneously. FEED—The vital part of a Grain Drill is its FEED. It is really the heart of the drill, and upon the utility of the feed depends the accurate sowing of the grain. We use the DOUBLE RUN FORCE FEED SYSTEM. This double-run feed has a standard wheat throat and extra large oat throat, thus easily permitting the passage, without wedging or cracking of trashy varieties of long bearded oats, cow peas, lima beans, etc. Bear in mind that all devices for sowing grain measure the seed and do not sow by weight, hence the slight variations from indicated amounts unless standard or medium-size grain is used for seed. There are two openings, viz.; one for wheat and small grain, and the other for oats, peas, beans, barley, beet seed, etc. Each revolution of the feed wheel is certain to deliver the same amount of grain from each distributor. The feed never bunches the seed. It sows all kinds of seed in just the quantity desired, cow peas, corn and beans included; does not crack the seed. Cracked seed will not germinate.

DISCS—13-inch large discs, with 6 inch assistant which runs slightly behind the large disc, thus keeping the furrow open until the seed is deposited both fitted with chilled iron bone bearings. All discs fitted with adjustable scrapers.

DRAG BARS—High carbon steel drag bars, 1½x½ inch, which are bolted near the top of the disc at the rear and to the steel draft rod at the front of the frame, insuring rigidity to line.

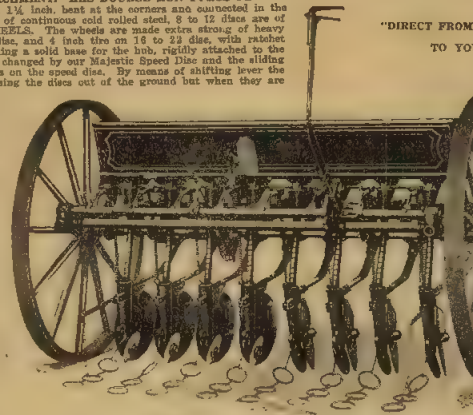
PRESSURE—Long coiled steel springs, applied at the rear of the boot, the most effective point for applying same.

DRAG CHAINS—Heavy 3-8 inch chains, with the two end chains lifted automatically and carried clear of the drive wheels when turning.

All Disc Drills are equipped with our small cleaning disc on convex ends of large disc. This disc serves as a cleaner and assistant furrow opener for the large disc, provides a wide seed bed and is controlled by us under our own patents exclusively.

TUBES—Ribbon steel grain tubes are used on this drill. These tubes are swiveled into the receivers and cannot kink or buckle

PRESSURE WHEELS. At an extra price we can equip drills with **pressure wheels 14½ inches in diameter, 1¾ inch face** in place of drag chains. These are desirable in wheat growing sections where the soil is loose. Grass seeder attachment furnished only at an extra price when ordered, sows broadcast Alfalfa, Clover, Timothy, etc., and will sow separately or with grain and ahead or back of discs as desired. Special alfalfa seeder saves seed through seed tubes in furrows. Agitator attachment is necessary for sowing long bearded oats. Seat is not regularly furnished, as most operators prefer to ride at seed box. Fertilizer drills have double hoppers, one compartment for sowing grain, the other for the fertilizer. Agitator feed sows 100 to 400 pounds per acre. Feed is thrown out of gear by hand at end of row, or at any time desired, without stopping the grain feed. Prices are for drills complete with evener and neckyoke. Two-horse evener furnished with 8 and 9 disc drills, 3 horse evener with 10 disc drills, and 4 horse evener with larger size drills. Shipped direct to you from Indiana Factory.



HAS 48-INCH STEEL WHEELS. CAN BE FURNISHED WITH PRESSURE WHEELS IN PLACE OF CHAINS.

PRICES FOR PLAIN DRILLS AND DRILLS WITH FERTILIZER ATTACHMENT.	Plain Grain Drills	Combination and Grain Fertilizer Drills

The "Challenge" Hoe Drill

The Challenge 8 and 10 Hoe Grain Drills have a frame of 1¼ inch continuous steel tubing. Axle 1 5-16 inch in diameter, cold rolled steel driven by a heavy chain from left wheel. Wheels are of steel, have staggered spokes, are 42 inches high, with 2½ inch tire, not fitted with ratchet hubs. This drill is fitted with pin break hoes only and spring trip cannot be attached, neither can fertilizer attachment. The force feed is driven by chain direct from axle and a gauge shows the amount of wheat, oats, flax, barley, beets and small grains sown and can be changed while drill is in motion. Double steel drag bars are furnished on size 1½x5-16 in. When the hoes are raised from the ground the drill is thrown out of gear. Hoes are 8 in. apart and tubes are rubber. Grass seeder force feed, permits of sowing either in front of or behind hoes, all small grass seeds, including alfalfa, supplied at small extra cost. Fertilizer attachment cannot be supplied with these drills. Seat, evener and neckyoke not furnished at prices quoted. Shipped direct to you from Indiana Factory.

B-2540—Challenge 8 Hoe, 8 inches apart, Plants 5½ feet, weight 600 Pounds

B-2541—Challenge 10 Hoe, 8 inches apart, Plants 7 feet, weight, 550 Pounds

B-2542—Extra for Grass Seed Attachment, weight 50 pounds

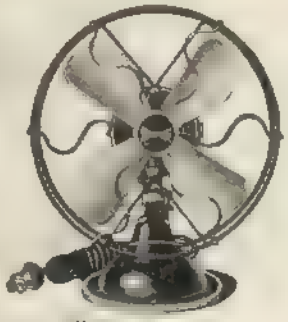
For doubletrees, single trees and neckyoke add

Electric Fans

"MENOMINEE" 4 BLADE ELECTRIC FANS

Made By Menominee Electric Fan Co.

All fans mounted with separable [illegible] and [illegible] cord. Universal motors operate on either direct or alternating current. "Menominee" fans are guaranteed against all [illegible] defects. Should any fan [illegible] within [illegible] days from date of sale, we will make repair or replacement without charge. A [illegible] tag is furnished with every fan. Any fan that proves unsatisfactory positively must be returned within 10 days from date of sale. Try a fan out [illegible]



Menominee Stationary

Direct or Alternating Current—Universal motor, [illegible] to 60 cycles, 4 [illegible] blades brass [illegible] steel guard, [illegible] cast rear motor body and [illegible] Each in [illegible] carton, [illegible] rings [illegible] to base [illegible] [illegible] [illegible] Each in wire bound wood box.

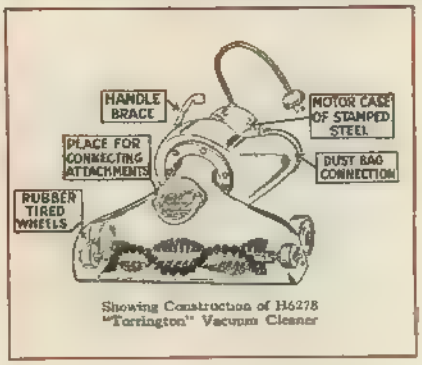
Torrington VACUUM CLEANER



Showing Construction of H6278 "Torrington" Vacuum Cleaner

Machines of recognized quality, perfectly constructed and embodying the latest improvements. The motor unhampered by belts or gears delivers its entire power to generate suction. The switch and wire connections are conveniently located in the handle. The national advertising campaign carried on by the manufacturer plus our special free advertising offer will greatly increase your sales. You can offer these cleaners with full assurance that they will give absolute satisfaction. Order Now.

"TORRINGTON" ELECTRIC VACUUM CLEANER

Licensed Under Kenney Patents

H6278—Highly nickeled steel case, 12½ in. wide rubber tire, roller bearing steel wheels, nickeled steel nozzle, adjustable revolving bristle brush, can be lowered or raised for picking up lint, threads, etc. 110 volt single phase universal current motor in nickel plated steel case has separate cooling fans on armature shaft, armature mounted on extra large phosphor bronze bearings, 3½ ft. black rubberoid handle, rubber switch on cord, nickeled hand parts, specially constructed dust bag, screens all dust thoroughly, 20 ft. insulated cord with electric plug, fits any electric fixture. Removes every bit of dust or grit from rugs or carpets and saves wear. 1 in crate, 12 lbs.

POWER HAMMERS

FAIRBANKS, MOTOR-DRIVEN

The Fairbanks Hammer adapts itself readily to an electrical motor drive.

The advantages of a motor-driven hammer which appeal more generally to the purchaser are that the hammer may be located in the most convenient place for use irrespective of main line shaft, and also when not in use no power is consumed.

HERCULES

Hercules Power Hammers contain all the good features found in the best hammers made. They are strictly up to date and are placed on the market as a strictly tested and guaranteed tool.

Their moderate cost make them an indispensable tool in carriage makers' or blacksmith shops.

The frame and anvil are cast in one solid, coreless piece, giving rigidity, perfect alignment of the dies and solid anvil for the reception of severe and rapid blows.

The position of the dies is such that there is no limit to the length of the bar that can be worked.

The control of the hammers is so perfect that every blow, from a gentle stroke to a rapid succession of mighty blows, is at the will of the operator

The Hammers are double sided and can be operated as well from one side as from the other side

The height of the frame is such that a tire three feet in diameter can be welded.

No. 0—Weight of ram, 30 lbs. Upper dies, 3x1¼ in., lower dies, 3x2 in., for plow work Size of Hammer, 18x25 in. Height, 5 ft. 4 in. Pulley, 9x2½ in. Speed, 400 r. p. m. Capacity, 2 in., square or round. Weight, 1100 lbs. One H. P. required to operate.
. . . . . Each, $. . .

No. 1—Weight of ram, 65 lbs. Dies, 1 set, 2½x3 in , for forging round iron straight or tapering. Size of Hammer, 20x27 in. Height, 5 ft. 8 in. Pulley, 10x2½ in. Speed, 300 r. p. m. Capacity, 2½ in., round or square. Weight, 1400 lbs. Two H. P. required to operate.
. . . . . Each, $ . . .

In ordering Hercules Hammers specify kind of current, whether Direct or Alternating. If Direct, give voltage. If Alternating, give voltage, phase and cycle.

CAMPERS' GOODS

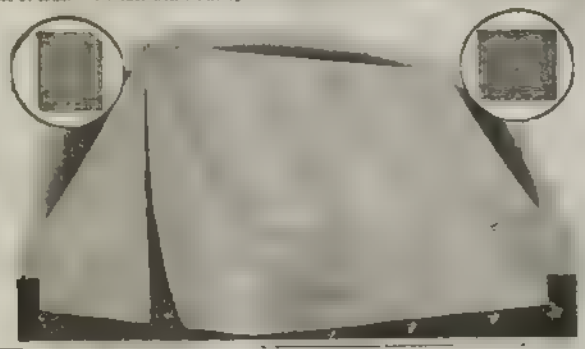
This line of campers' goods includes only proven sellers, selected for their dependability and established merits. Our five-house buying power makes it possible for us to have a large stock on hand at all times and to be able to offer these goods at the lowest possible prices. Make BUTLER BROTHERS your source of supply for campers' goods.

"RELIANCE" WALL TENTS AND TENT FLIES

In Stock Ready for Shipment

This grade is generally made elsewhere of 36 in. duck, marked 10 oz. and 12 oz. "Reliance" brand are made of standard 29½ inch duck 8 oz. and 10 oz. marked 10 and 12 oz. A piece of duck 29½ inches wide 36 inches long is the same weight per square foot as 10 oz. and 12 oz. duck 36 inches wide and 36 inches long. Buy here and you will be sure that you do not pay for 10 oz. 29½ inch goods and get 10 oz. 36 in. goods.

Note—We can furnish any grade, size or style of tent not listed with a delay of about 10 days. We will quote prices upon application. Cancellation will not be accepted 3 days after date of order. Neither will we accept the return of tents which have been made to order.



"Reliance" Wall Tents—High grade white duck closely woven, corners and eaves doubled, sewed and reinforced, seams felled and double stitched. Sewed in grommets.

"COMMON SENSE" OPEN AIR TENT HOUSES

Shipped direct from factory in Central Iowa, allow 10 days to 3 weeks for delivery

For sleeping and living in the open air, camping, hunting, fishing and automobiling, quickly set up or collapsible and packed into convenient bundles. Shutters which can be in many positions may be adjusted for any kind of weather. May be entirely screened by simply attaching to the cypress frame mosquito netting or common screen wire. Stands up under very hard winds because of the guy wires from the roof cover to be staked to the ground. Baseboards may be staked or sunk in the ground, thus shutting out insects and water may be shoveled in a farm spade floor. Invaluable for sleeping in hot weather by keeping open on all sides for the cool air while shutting out the mosquitoes. Ventilation can be regulated by means of cords. Cypress frame finish in natural with chocolate ends, shutters. Height of walls 5 ft. 6 in. Walls and shutters covered with 8 oz. white duck. Roof of 10 oz. D. F. white duck.

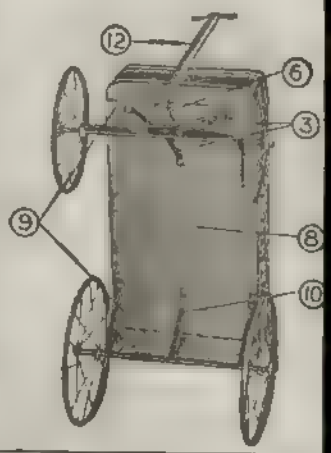
ASST wagons **$13.60**

12 BIG FEATURES OF "MARATHON" STEEL WAGONS

1. **Body Size**—Larger than any others
2. **Rear Wheels**—Larger than front wheels and extra strong
3. **Indestructible Fifth Wheel**—Superior construction giving extra strength carries, wear out and give trouble
4. **Handle Support**—Keeps handle off floor when not in use
5. **Front Gear**—Very strong in one piece with extra strong brace
6. **Tongue Irons**—Made of extra heavy gauge steel
7. **Reinforced Wagon Box**—Reinforced in [illegible] places with heavy rolls and beads
8. **Bottom Boards**—Matched kiln dried lumber tongued and grooved and glued.
9. **Wood Cleats**—Extra cleats reinforcing bottom boards.
10. **Extra Brace**—Rear axle of all numbers except F101 and F103 has extra steel brace [illegible]
11. **Body Finish**—Bright red enamel [illegible] and [illegible] with green inside
12. **Hardwood Handle**—With steel pin or D grips



"PEERLESS" STEEL WAGONS

You will have great difficulty in finding values that equal these. Similar to the "Marathon" wagons shown on this page but heavier in construction. There are no better wagons made than the "Peerless." The comparison of sizes shown for the "Marathon" also applies to these wagons.

Heavy steel sides, corrugated bands, blue enameled outside, red inside, strong steel braces and bolsters attached to body by bolts, improved fifth wheel and steel axles, baked, black enameled double spoke wheels with nickel hub caps, strong parent [illegible] hardwood handle, [illegible] D" grip, otherwise similar description to the "Marathon" wagons shown above. Each packed in carton

The runners are japanned, not merely painted. The wood work is carefully selected, decorated, and finished with **three coats** of the best grade varnish

This **careful** and **scientific construction** explains why the "Flexible Flyer" retains its value year after year and **outlasts all ordinary sleds.**

The grooved chrome nickel steel runners (patented) make "Flexible Flyers" the only sleds that will steer on snow or ice, and the safest sleds made

The new all-steel front makes easier and more efficient steering and greatly strengthens the sled

FIRE FLY COASTERS

Next to "Flexible Flyers" these Coasters are without doubt far superior in construction, design, finish and steering qualities to any other Coasters on the market

The FIRE FLY COASTERS have spring steel runners, ⊥ shaped, making them very strong, vertically, but flexible sidewise. This enables one to guide the Coaster by the steering bar, curving the runners to the right or left, as desired. The steering is thus made easy, and is a great charm to the Coaster **Light, Fast, Strong, Cheap.**

PIKE KANTBREAK

Soft fast cutting grit. Steel rod is heavily coated with sharpening material. Rubber tips on end. XXXXX handles, with nickel plated ferrules. Weight, 6 lbs per dozen.

No.	20
Length over all inch	13
Per dozen	$7.00

FRENCH AUTO OIL

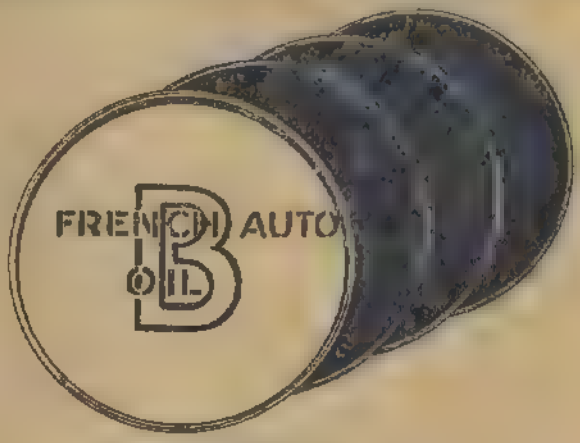
PURE PENNSYLVANIA PARAFFINE BASE OIL

KEEPS YOUR MOTOR YOUNG

Cheapest per Mile

French Auto Oil is made from the premium crude oil of the world, by practical and scientific refiners, who have been making successful lubricating oils for more than thirty years. Embodies the maximum of lubrication purity and adaptation in motor oil. The terrific heat in the engine breaks down ordinary oil and forms sediment. Repeated tests have shown this oil to resist heat and reduce sediment. That means less friction, less wear on the engine, less oil expense. The highest possible quality.

5-Gallon Can



60-Gallon Drum

¼-Gallon Can

A WEIGHT FOR EVERY CAR

A Grade—Just heavy enough for any motor that requires a heavy oil, wine color, designed for both air and water-cooled motors.

B Grade—Neither heavy nor light, wine color, designed for motors using medium oil.

C Grade—Possesses a bright amber color, just the oil for every car, works perfectly every month of the year. The value of this oil to your motor will prove a pleasing revelation.

Drums contain 50 gallons, ¼ drums about 15 gallons. Five-gallon cans, 2 in a case; 1-gallon cans, 12 in a case; ½-gallon cans, 12 in a case. No charge for package.

Empty drums and quarter drums can usually be returned, and credit will be given at market rates if they are in good condition. **Obtain permission and shipping instructions before returning.**

Note—Oils and greases mix in carloads.

MOCO REX HARD OIL OR CUP GREASE

Will Stay Where It is Put

It is very slightly affected by changes in temperature; lubricates efficiently. Cleaner to use than oil; more convenient and economical.

A special lubricant for high grade machinery, vehicles, automobiles, threshing machines, steam and gas engines, motors, etc.

	Bbls Lb	½ bbls Lb	25-lb Cans Can	10-lb Cans Can	5-lb Cans Can	2-lb Cans Can	1-lb Cans Can
Moco Rex Hard Oil or Cup Grease (Plain, no Graphite)	$0.19	.19½	5.60	2.10	1.20	.46	.32

MOCO NON-FLUID OIL

For Differentials and Transmissions

Does not send out under heat pressure. Clings to gear teeth and bearing surfaces. Provides a permanent, slippery pressure-resisting between gears and bearings, thereby reducing friction to a minimum, and assuring you of all the power developed. The intricate bearings and ball or roller bearings in differential cannot be operated smoothly and efficiently without perfect lubrication. All contact must be kept apart and cushioned, so as to absorb impact and eliminate friction.

Barrels contain about 400 lbs. Half barrels contain about 240 lbs. Twenty-five-lb cans, one in a case; 10-lb cans, 6 in a case; 5-lb cans, 12 in a case; 1-lb cans, 24 in a case.

Note—Oils and greases mix in carloads.

FRENCH AUTO OIL

PURE PENNSYLVANIA PARAFFINE BASE OIL.

KEEPS YOUR MOTOR YOUNG

Cheapest per Mile

French Auto Oil is made from the premium crude oil of the world, by practical and scientific refiners, who have been making successful lubricating oils for more than thirty years. Embodies the maximum of lubrication purity and adaptation in motor oil. The terrific heat in the engine breaks down ordinary oil and forms sediment. Repeated tests have shown this oil to resist heat and reduce sediment. That means less friction, less wear on the engine, less oil expense. The highest possible quality.

5-Gallon Can

50-Gallon Drum

⅛-Gallon Can

A WEIGHT FOR EVERY CAR

A Grade—Just heavy enough for any motor that requires a heavy oil, wine color, designed for both air and water-cooled motors.

B Grade—Neither heavy nor light, wine color, designed for motors using medium oil.

C Grade—Possesses a bright amber color, just the oil for every car, works perfectly every month of the year. The value of this oil to your motor will prove a pleasing revelation.

Six in a Package

SAFETY RAZORS

AUTO STROP SAFETY RAZORS

Shaves, Strops Automatically, and Cleans Without Removing Blade from the Holder

Only the Auto Strop Blade can be used in the Auto Strop Frame, and the Blade is not removed from the holder for stropping or cleaning. Its Adjustable Feature is Supremely Simple. No unscrewing. No possibility of the Adjustment Slipping after being fixed. This feature permits the user to adjust at will for a light or close shave.

The Razor and Automatic Stropper are Combined in One Piece—the frame serves the purpose of holding the blade when shaving and also acts as an Automatic Stropper; the blade can be stropped without removing it from the frame by inserting the Flexible Horsehide Strop, which accompanies each Razor, between the frame.

TO
PERFECTION

OVEN. Extra large nearly square, with even rack 17½x18 inches. Flues are of large capacity, making a perfect baking oven.

OVEN BOTTOM. One of the special features of this stove is the peculiar construction of the oven bottom. The entire upper surface exposed to the inside is covered with small, diamond-shaped points that raise the baking pan so that the heat circulates freely beneath the pan. These points also prevent the oven bottom from warping, or cracking, and increases the radiation into the oven.

TOP PLATES. The main top is cut into four sections, which many years' experience has demonstrated to be the most durable construction. The outer edges, or rim, are extra heavy and have reinforcing ribs that prevent breakage in shipment.

COVERS AND CENTERS. Equipped with two-piece SECURITY COVERS, with reinforced SECURITY CENTERS. Their construction has stood the test of many years' severe usage. We guarantee them not to crack or warp. The SECURITY ANTI-SCORCH HOT BLAST COVERS can be put on if desired.

POUCH FEED. The pouch feed door cuts very low in front so that coal can be put in easily. The lift-up style that forms a shield against the heat from top when putting in fuel and prevents the coal from falling on top of the stove.

FIRE BOX. The linings are made extra heavy and corrugated to increase their durability. The general shape of the fire box is oval which prevents warping. The grate bars are duplex, reversible for burning wood. The front end of the range contains a hot blast draft door, entirely independent of the regular draft door, through which air is admitted into a pocket, or passageway, formed by the inside wall of the front grate and front end of range. In this way, air is made to circulate back of the front grate and around back of both end linings. After becoming intensely heated, the air enters into the fire box through the holes in top of the linings, causing the gases and smoke to be consumed that are wasted in other ranges. This means a large saving of fuel. This circulation of air back of the linings prevents them from becoming overheated and makes them practically indestructible.

DOUBLE END SHELF. This is an entirely new improvement, original with us and very useful. A second shelf is placed just below the top end shelf. A very convenient place in which to put many articles used often about the kitchen stove. Also has a row of heavy cast hooks on extreme edge of top shelf.

RESERVOIR. Very large, ten-gallon, all-copper detachable reservoir.
ASH PAN. Large bailed ash pan of ample capacity, measures 12⅛x 12⅛x4 in. Size of Pipe Collar 7 inches.

All ranges are blackened, polished, securely crated and shipped direct to you from Factory in Northwestern Missouri.

EVERY RANGE IS SOLD WITH OUR BINDING GUARANTEE

BEAUTIFUL WHITE PORCELAIN BACK AND OVEN DOOR.

LARGE ROOMY OVEN, WITH DOUBLE CORRUGATED OVEN BOTTOM.

HIGH GRADE THERMOMETER

PROMPT SHIPMENTS, SATISFACTION AND SAFE DELIVERY GUARANTEED.

Our Home Security is a beautiful and massive Cast Range, the highest type of range construction. Every latest improvement is embodied in the manufacture of same; not a feature has been left out which would improve it. We want you to read the description of this range carefully; note particularly the way the oven is constructed, the anti scorch hot blast covers; the very heavy weight front grate; the extra heavy fire back, which is guaranteed for five years; large ash pan; beam duplex grate; extra large reservoir; the beautiful white porcelain splash backs and oven door; spring balanced oven door; double corrugated oven bottom; in fact, compare it, part for part, with ranges selling from $75.00 to $95.00. This range has every feature of any value that they have and many others. Our low price is made possible by our Direct from Factory selling policy to Co-Operative Members. No one gets a profit on this stove but the manufacturer, and a small selling expense added for ourselves

OVEN. Perfectly square, high and roomy. One can bake or roast in any part of it, the oven rack being the same size as the oven bottom. The flue construction is such as to throw the heat uniformly around five sides of the oven, so that baking is even top and bottom

OVEN BOTTOM. One of the special features of this range is our double corrugated, or ribbed, oven bottom. These corrugations strengthen the plate so it will not warp or crack and allow the heat to circulate beneath the bake pan which prevents burning on the bottom. It also indicates an even heat throughout the oven so that one can bake on the oven rack as well as on the oven bottom.

TOP PLATES. The main top of the range is cut into four sections which many years' experience has demonstrated to be the most durable construction. The outer edges, or rim, are extra heavy and have reinforcing ribs that prevent breakage in shipment.

COVERS AND CENTERS. Each Home Security Range has two of our patent anti-scorch hot blast covers and four of our two-piece SECURITY COVERS, with reinforced SECURITY CENTERS. Their construction has stood the test of many years' severe usage. We guarantee them not to crack or warp.

POUCH FEED. The pouch feed door cuts very low in front so that coal can be poured in easily. The cover has a coking register and lifts up, which forms a shield against the heat and prevents coal from falling on top of the stove.

FIRE BOX. The linings are made extra heavy and corrugated to increase their durability. The general shape of the fire box is oval which prevents warping. The grate bars are duplex reversible for burning wood, and are so constructed that they are easily replaced without removing any other linings.

The front end of the range contains a hot blast draft door, entirely independent of the regular draft door, through which air is admitted into a pocket, or passage way, formed by the inside wall of the front grate and front end of range. In this way air is made to circulate back of the front grate and around back of both end linings. After becoming intensely heated in this way, the air enters into the fire box through holes in the top of the linings, causing the gases and smoke to be consumed that are wasted in other ranges. This means a large saving of fuel. This circulation of air back of the linings prevent them from becoming overheated and makes them practically indestructible.

SMOOTH NICKEL. It will be seen that all nickel plated parts are absolutely smooth, with rounded corners, and highly polished. While more expensive, it gives a rich appearance and is more easily kept bright and clean. The nickel tube towel bar is the patent detachable kind.

WHITE FINISH. The oven door lining and the closet panels on each side of the smoke pipe are made of white porcelainized steel. The closet panels are removable for cleaning. Guaranteed not to change color, or blister from the heat. A very decided improvement in range construction that will appeal to every housewife.

RESERVOIR. Very large cast-iron white enamel lined, with large japanned cover, the lift-up part being 11½x18 inches. The reservoir damper is so arranged that water can be heated while baking is being done

THERMOMETER. The oven door contains a high grade thermometer that accurately indicates the temperature of the oven. Saves opening the oven door which rapidly loses the heat from the oven. No housewife would be without this convenience after using a HOME SECURITY RANGE.

ASH PAN. The peculiar construction of the ash pan door enables us to furnish a very commodious ash pan, it being 7 inches wide, 7 inches deep and 15 inches long. Size of Pipe Collar 7 inches.

All ranges are blackened, polished, securely crated and shipped direct to you from Factory in Northwestern Missouri.

Carried in Semi-Finished only except such numbers as designated with †. These numbers so designated are popular Automobile Wrenches and we carry them in the finished as well as semi-finished

UNFINISHED CAN BE FURNISHED FROM FACTORY

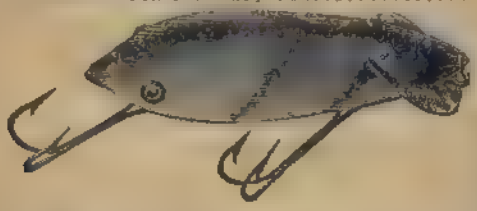
MINNOWS

HEDDON CRAB WIGGLERS

Floats when at rest. Dives and wiggles when retrieved. Two triple hooks.

No. 1800S—White body, red and green spots	Per dozen	$12 00
No. 1802—White body, red head	"	12 00
No. 1809D—Scale finish	"	12 00
No. 1809H—Scale finish, red	"	12.00

BABY CRAB WIGGLERS



A small type of crab wiggler. Has two double hooks, so placed as to be absolutely weedless. A great killer. Wgt. ¾ oz.

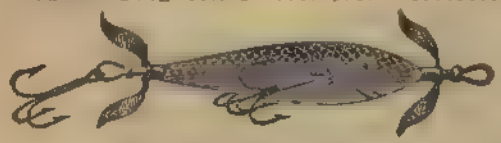
No. 1902—White body, red head	Per dozen	$12.00
No. 1905—Yellow body, green back, green and yellow spots	"	12 00
No. 1909C—Imitation crab	"	12.00
No. 1909D—Scale finish	"	12 00
No. 1909H—Scale finish, red belly	"	12.00

UNDERWATER

No. 150

The standard or non wiggling type of sinking wooden minnow. Superior finish non-cracking enamel. Fitted with two spinners and five strong treble hooks. Length of body, 3¾ inches. Weight, ⅝ oz.

No. 150—Fancy green back, white belly	Per dozen	$12 00
No. 151—Rainbow colored back, white belly	"	12 00
No. 159A—Yellow perch	"	12 00
No. 159B—Frog colors	"	12 00



No. 100

The standard sinking minnow fitted with two spinners and three strong treble hooks. Length, 3½-inch. Weight, ⅝ oz.

No. 100—Fancy green back, white belly	Per dozen	$11 40
No. 101—Rainbow colored back, white belly	"	11.40
No. 102—White with red stripes	"	11.40
No. 109A—Yellow perch	"	11.40
No. 109B—Imitation frog colors	"	11.40

TAD POLLY

Has a wonderful wiggling movement in the water. Floats when it rests. Dives and runs rather deep when retrieved.

PFLEUGERS NEVERFAIL

Cut shows two-thirds actual size.

Made of selected cedar and ballasted to ride "belly down." Heavily coated with indestructible waterproof enamels. Mounted with size 1 best quality bright nickel plated spear point treble ringed hooks.

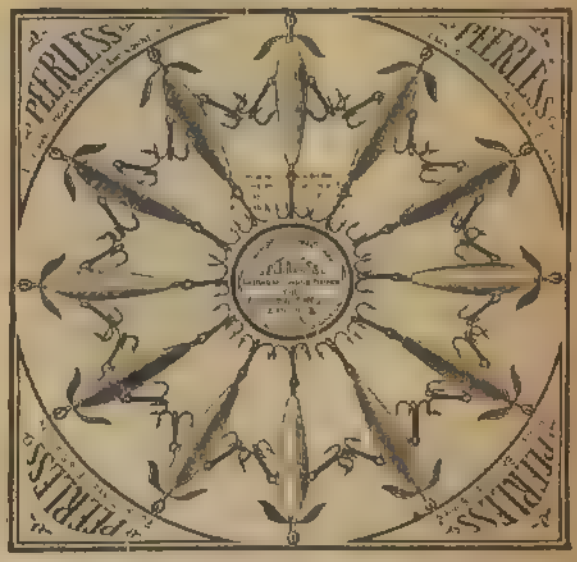
Length, 5⅝ inches. Mounted with 5 treble hooks.

No. 3169—White belly, green and red spotted back	Per doz	$9 00
No. 3173—White belly, rainbow back	"	9 00
No. 3185—White belly, green cracked back	"	9.00

Length, 3 inches. Mounted with 3 treble hooks.

No. 3169—White belly, green and red spotted back	Per doz	$8 00
No. 3173—White belly, rainbow back	"	8 00
No. 3185—White belly, green cracked back	"	8.00

PEERLESS



No. 2 000—Peerless Assortment, consists of twelve 2½-inch wood minnows with white belly, green and red back and all white enamel. Mounted one dozen on card. Weight per dozen, about 1 lb. Per dozen $6.00

Series 5000—Weight, ½ oz. Length, 3⅞-inch.		
No. 5000—Fancy green back	Per dozen	$13 20
No. 5000S—White spotted	"	13 20
No. 5002—White body, red head	"	13 20
No. 5005—Green back, orange spots	"	13 20
No. 5009D—Scale finish	"	13 20
No. 5009H—Scale finish, red belly	"	13.20
Series 6000—Weight, ¾ oz. Length, 4¼-inch.		
No. 6000—Fancy green back	Per dozen	$13 20
No. 6000S—White spotted	"	13 20
No. 6002—White body, red head	"	13 20
No. 6005—Green back, orange spots	"	13 20
No. 6009D—Scale finish	"	13 20
No. 6009H—Scale finish, red belly	"	13.20

Special "Points"

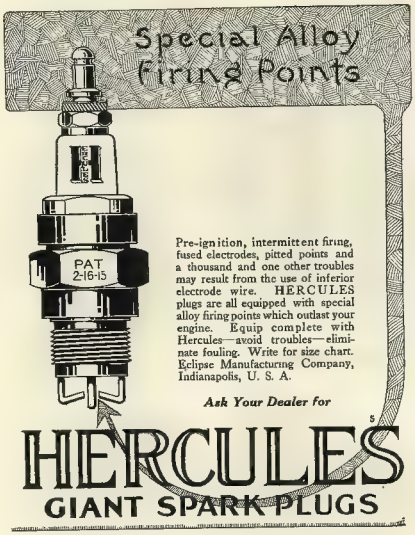
Not only the special alloy firing points make Hercules Giant plugs good—but considerable sales points.

Advertising that reaches practically every car owner in the country—every one instructing the reader:

"Ask Your Dealer for Hercules Plugs." Dealer Helps that form the point of contact between the national advertising and your customers.

It's your fault if these points don't point the way to increased sales. You can handle Hercules—you can use Hercules Dealer Helps. You can build a bigger spark plug business.

Write us today. Get the pointers on the Hercules Dealer's proposition.



Special Alloy
Firing Points
PAT
2-16-15
Pre-ignition, intermittent firing, fused electrodes, pitted points and a thousand and one other troubles may result from the use of inferior electrode wire. HERCULES plugs are all equipped with special alloy firing points which outlast your engine. Equip complete with Hercules—avoid troubles—eliminate fouling. Write for size chart. Eclipse Manufacturing Company, Indianapolis, U. S. A.

HERCULES
GIANT SPARK PLUGS

"Say, Jim,

since when do you sell oil?"

MR. K., a hardware merchant in a prosperous Illinois town, recently had delivered a shipment of Gargoyle Mobiloils.

It happened that when the oil was delivered Mr. K.'s friend, a building contractor, was in the store.

The following conversation ensued:

"Say, Jim, since when do you sell automobile oil?"

"Why, I've sold Gargoyle Mobiloils for the last five years."

"Well, it's a wonder you wouldn't tell folks about it. My trucks use about 6 barrels of Gargoyle Mobiloils a year. I don't see any reason why you shouldn't sell them to me."

This was an eye-opener to Mr. K. His experience showed him clearly what profits he had lost by selling oil in the old-fashioned way—from a barrel in a dark corner.

Mr. K. now keeps cans of Gargoyle Mobiloils in his window. The Gargoyle flange sign which he hung out has brought him many dollars of profits from passing automobile owners. He does a thriving business in automobile accessories.

Do you keep your Gargoyle Mobiloils out in plain sight, where you can cash in to the fullest on the profitable demand which Gargoyle Mobiloils enjoy?

Is our Chart of Recommendations in a conspicuous place in your store so that people know that you sell the correct oil for every make of passenger car, motor truck, motor-cycle and tractor?

Can you afford to wait until an experience like Mr. K.'s shows you the road to bigger profits.

GARGOYLE
Mobiloils

A grade for each type of motor

Ask our salesman for a Chart of Recommendations for your wall.

VACUUM OIL COMPANY, New York, U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

Domestic Branches
New York, Boston, Philadelphia, Chicago, Pittsburgh, Detroit, Indianapolis, Minneapolis, Des Moines, Kansas City, Kan.

Chart of Recommendations for AUTOMOBILES

(Abbreviated Edition)

How to Read the Chart

THE Correct Grades of Gargoyle Mobiloils for engine lubrication are specified in the chart below

A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
E means Gargoyle Mobiloil "E"
Arc means Gargoyle Mobiloil Arctic

These recommendations cover all models of both passenger and commercial vehicles unless otherwise specified.

Where different grades of Gargoyle Mobiloils are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures may be experienced.

This Chart is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and constitutes a scientific guide to correct Automobile Lubrication.

If your car is not listed in this partial chart, consult the Chart of Recommendations at your dealer's or send for booklet "Correct Lubrication" which lists the Correct Grades for all cars

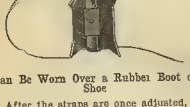
CLIMAX



Can Be Worn Over a Rubber Boot or Shoe

After the straps are once adjusted, a small split rivet should be put through the strap and the hole in the plate to prevent the Creeper from slipping to one side.

Climax . Per Doz., $6 00

ICE KING

Can Be Worn Over a Rubber Boot or Shoe

Thoroughly practical and largely sold in Alaska. Points are ¾ in. long with ⅞ in. shoulder, well riveted into plate.

Ice King.....Per Doz., $9.00

TAKU

This is our Special Design. Made with galvanized steel straps coming up over the edge of the sole, thus doing away with the only cause of complaint against the old Jamestown pattern. Galvanized iron plate, hardened steel points, webbing toe strap, best quality rubber heel band.

No. 1—Size for Men. Doz. Pairs, $15.00
No. 2— " " Women " " 15.00
One dozen pairs in a box. Wt. 4½ lbs.

No. 400—Length, 51 in. Height, 8½ in. Width, 17 in. Weight per dozen, 185 lbs. Per dozen, $84.00

One sixth dozen in a bundle.

HOCKING VALLEY CIDER MILLS

The principle adapted is of the large hydraulic presses to a hand mill. The grinding device consists of a hardwood cylinder, revolving rapidly, with serrated steel knives running lengthwise which break down the juice cells and make a pomace that yields under the press every particle of juice in the fruit. A quart of water will clean it after using. An important feature of the mills is the absence of metal of any kind to rust or impair the quality of the cider. We guarantee them to be entirely satisfactory in every respect, in execution, ease of operation, capacity, in durability and finish.

JUNIOR

The Junior Mill is larger than other Juniors, and is almost equal in capacity to other Medium mills. It is designed especially for family use where it is not intended to make large quantities of cider, but only for use at odd times as convenience and leisure may permit. Furnished with crank and pulley when desired.

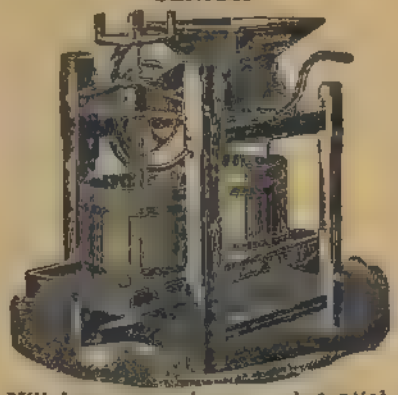
No.	Junior
Height of tubs, inch	12
Inside diameter of tubs, inch	10½
Weight each, lbs	172
Each	$

MEDIUM

The Medium Mill is about half way between our Junior and Senior in size and capacity, and is designed for general family use where something larger than a Junior is desired. It is often economy to have more capacity in a cider mill than actual needs seem to require. Our Medium is a splendid mill in every way, and is destined to become very popular. Furnished with crank and pulley when desired.

No.	Medium
Height of tubs, inch	13½
Inside diameter of tubs, inch	12½
Weight each, lbs	25[illegible]
Each	$
Power pulley for all sizes	Extra

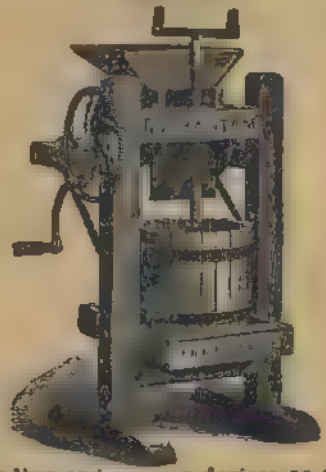
SENIOR



The Senior Mill has a very heavy, substantial frame, a cross head of extra weight and strength and is designed for use where considerable capacity is required. For use in warehouses and large orchards there is nothing made equal to it. It will grind more apples in a given time, and do it easier, and make more cider from the same quantity of apples than any mill offered to the trade. We furnish the Senior Mill with crank and pulley when desired.

No.	Senior
Height of tubs, inch	15
Inside diameter of tubs, inch	15½
Weight each, lbs	367
Each	$

BANTAM



The same grinding and grating devices as used on our larger mills, and the same that is used on all the large hydraulic presses is used in this model. It consists of a hardwood cylinder with serrated steel blades running lengthwise, which revolves rapidly and which breaks down all the juice cells and makes a pomace that yields under the press all the juice in the fruit. A quart of water will clean it after using. Intended for those who have only a small quantity of apples or grapes to work up.

No.	Bantam
Height of tub, inch	10½
Inside diameter of tub, inch	10
Weight each, lbs	113
Each	$

CORN SHELLERS

ONE HOLE

This is a right hand one hole sheller with cast balance wheel and wrought spokes. It is well finished, durably made and attractive in appearance. The frame is made of hardwood and shafts of wrought iron. All parts are carefully fitted, they are easy of operation, and all gearing is placed inside, thus preventing accidents and breakage. The adjustable hopper renders it capable of easy adjustment to large or small corn.

One hole with fan table and adjustable hopper; weight, 130 lbs.....Each .....

TWO HOLE

This two hole sheller has a capacity double that of the one hole sheller. It has a cast balance wheel with wrought spokes It is well finished, durably made and attractive in appearance. The frame is made of hardwood and the shafts of wrought iron. All parts are carefully fitted, they are easy of operation and all gearing is placed inside, thus preventing accidents or breakage. The adjustable hopper renders it capable of easy adjustment to large or small corn. It is furnished with a crank and pulley, so that it can be used by power or by hand.

Two-hole with fan table, and driving pulley, without sacking elevator; weight, 201 lbs.. ..... Each .....
Two-hole with fan table, with driving pulley and sacking elevator; weight, 320 lbs.....Each ... .
Sacking elevators; weight, 90 lbs.....Each .....

HOCKING VALLEY FRUIT PRESSES

These presses represent the best that can be produced in this line. They are constructed of strictly high grade hardwood lumber, are thoroughly well made and handsomely finished.

Carried in three sizes: The No. 1 is small in capacity, No. 2 is most generally used, while No. 3 is designed for those having a considerable amount of fruit to crush.

Nos.	1	2	3
Height of tubs, inch...	10½	12	13½
Diameter of tubs, inch.....	8½	10½	12½
Weight, lbs	52	65	105

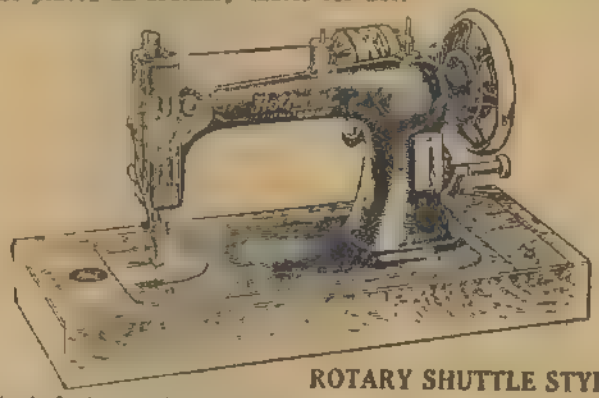
SEWING MACHINES

Complete with motor attached. Cord connecting motor to rheostat, and cord with attachment plug to connect rheostat with lamp socket. Woodwork highest quality golden oak. Full set of attachments in base drawer of each machine. Will produce about fifty per cent more stitches per minute than foot power machines, doing the same smoother. Hand grip on top of cover, so machine can be carried about as desired. These machines can be placed on ordinary tables for use.



ROTARY SHUTTLE STYLE

Latest design and best adapted to electric motors, as they will stand the speed developed. Bobbin holds more thread than any other machine. Shuttle and shuttle race housing are machined from one piece of steel. Non-clogging shuttle. Stitch regulator and tension regulator. Universal high speed motor on swinging bracket. Uses either alternating or direct current, and is reversible.

No.	S 16
Length base, inch	21
Width base, inch	9

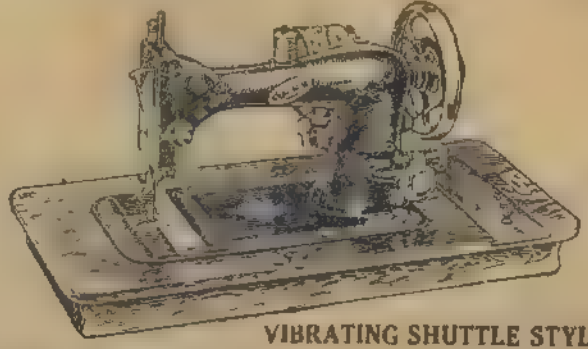
Net weight, lbs	36
Shipping weight each, lbs	62
Each	$87.00



VIBRATING SHUTTLE STYLE

A standard pattern, known by every user of a sewing machine. To withstand the speed developed by the electric motor, all materials in vibrating shuttle style are of the best. No. 105S15 is termed "Full Head," for heavy work. No. 105S14 is termed "Three Quarter Head," and is standard household size. Bobbin winder on Full Head is positive drive, and on Three Quarter is spring operated. Adjustable tension, released when pressure foot is lifted. Four motion feed; short, self-threading needle; stitch regulator; positive thread take-up; drawn steel pressure bar.

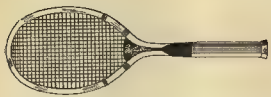
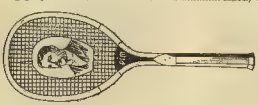
SEATTLE HARDWARE COMPANY

TENNIS RACKETS

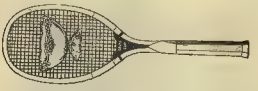
WRIGHT & DITSON



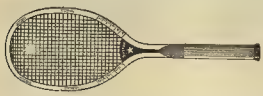
The McLoughlin—Made exactly according to specifications furnished by Mr. Maurice E. McLoughlin. The frame is strongly reinforced at the throat, where the strain comes. Strung with special tournament gun, the finest quality obtainable. The shape is that used almost exclusively by ranking players.....Each, $12.50



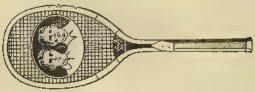
Davis Cup—This Racket is wider across the throat than other models, thus having a greater play surface and greater driving power. This Racket is well made and strung with selected gut.....Each, $12.50



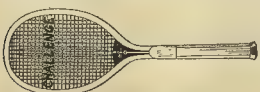
Ward & Wright—Style C—With Extra Center Strings. The strongest Racket made. Will stand restringing better than any other style Racket. Frame is of specially selected ash; the gut is the best imported.....Each, $12.50



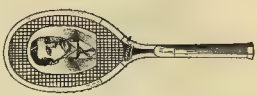
Sutton Star—Has a long, narrow head, with a 5¼-inch handle that does not taper until nearly reaching the throat. Strung with the very best lamb's gut, and in weights 14, 14¼, 14½ and 15 ounces.....Each, $12.50



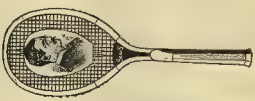
Pim—Is recognized as one of the leading Rackets of the country. The frame is made of lively ash, bound with strong tape near the throat. Strung with best quality lamb's gut, with two extra center strings.....Each, $9.00



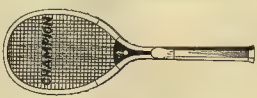
Challenge—This Racket is made of selected gut, the frame being made of a high-grade selected ash.....Each, $7.50



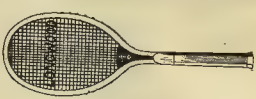
Campbell—This Racket is a new oval shape and has met with great success and popularity among the players. Strung with a fine quality gut.....Each, $7.50



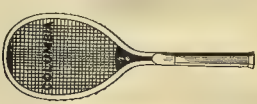
Sears—Latest model, strongest and best playing shape yet introduced in this grade. Strung with fine quality lamb's gut. Extra center strings.....Each, $7.50



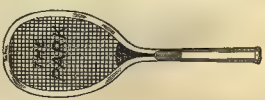
Champion—Made in the new and popular Ward & Wright shape. Strung with an excellent quality of Oriental gut.....Each, $5.00



Longwood—This Racket for a long time has been one of the most popular. Now, with its new shape, it is sure to be more popular than ever.....Each, $5.00



Columbia—Made after the latest and most approved style. Contains extra center strings, and is strung with good quality gut.....Each, $4 00



Park Full size and a very popular shape. Strung with a good quality white gut. Well finished throughout.....Each, $3.00

STORE LADDERS

MYERS

Clear Georgia pine ladder. Varnished. Open panel sides, 5 inches wide. Malleable iron dowel tees support each step on both ends. Fixtures malleable iron. Self-adjusting trolley with 3-inch anti-rattler wheel with cushion rubber tires and turned steel bearings. Double angle steel track suspended from ceiling by lag screws. Complete with clamp, bracket and end stops.

The floor wheel or travelers are 5 inches in diameter, composed of metal sides with cush on rubber tires, clamped in such a position that they cannot become loose. They run on a steel axle without friction or noise.

*Myers Ladder Complete—Width of ladder, 12 inches. Width of steps 5 inches. Average weight each, 50 lbs..... Each $27 00

*Myers Steel Trolley Track—Complete with hangers. Average weight per foot, 2 lbs. .....Per foot $0.40

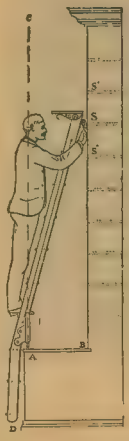
*Rubber Tires for Track and Floor Wheels—Average weight each, ¾ lbs .....Each $0.65

Directions for Ordering Myers Store Ladders.

Give exact height to ceiling and length of each track. If height of ceiling varies give height of ceiling at each end and center of each run of track.

*For shipment from factory only.

*IOWA



No. 5

Bent or Straight for Base Shelf.

Made from selected hardwood, bent or straight, with nickel plated or japanned mountings. Smooth steel track. Accurately turned and deeply grooved wheels. Roller fenders at base shelf are heavily rubber clad and mounted with adjustable bearings, making the operation of ladder smooth and noiseless. Provided with two wide shelves at top of ladder.

No. 5—Shipping weight each, 40 lbs.....Each $20.00

Track for Iowa with japanned mountings. Weight per foot, 1 lb.....Per foot .25

Track for Iowa with nickel plated mountings. Weight per foot, 1 lb.....Per foot .40

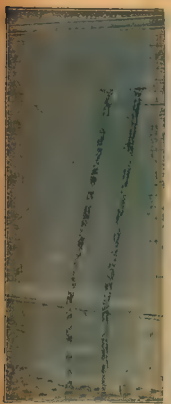
*For shipment from factory only.

HOW TO ORDER BICYCLE OR IOWA LADDERS

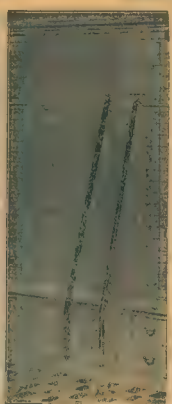
Refer to cut on this page and give the following measurements: D to C; D to A; A to B; B to S; B to S feet and B to S inches. State length of track wanted and the number of uprights of all kinds in the shelving, and say what they are whether solid uprights, partition boards, turned spindles or whether iron brackets are used to support the shelving. Be sure and send both a front view and the end view diagram of your shelving and tell us all you can about it. The more we know of your shelving the better we can serve you.

*For shipment from factory only.

*BICYCLE STORE LADDERS



Bent or Straight for Floor



Bent or Straight for Base Shelf

Bicycle Ladders also made to turn corners, either on base shelf or floor.

Made of oak or yellow pine. Natural finish, with japanned or nickel plated mountings. Noiseless steel track on either base shelf or floor; supports the entire weight of ladder and operator, relieving all liability of ladder falling or shelves sagging. Turned pole at top guides the upper end of ladder in moving it. Top of ladder has two hooks which fit over pole, preventing it from tipping backward. Fitted with extra wide top shelf for convenience in handling stock.

No. 1—Oak. Bent or straight. Base shelf or floor. Shipping weight each, 40 lbs.....Each **$20.00**

Yellow Pine. Bent or straight. Base shelf or floor. Shipping weight each, 35 lbs.....Each **18.00**

Ladders over 12 feet in length.....Extra **2.00**

Ladders for sloping floor..... " **2.00**

No. 3—Oak. Base shelf or floor ladders to turn corners. One section of bent pole is included. Shipping weight each, 40 lbs.....Each **24.00**

Yellow Pine. Base shelf or floor ladders to turn corners. One section of bent pole is included. Shipping weight each, 35 lbs.....Each **22.00**

Additional bent poles..... " **1.00**

*TRACK FOR BICYCLE LADDER BASE SHELF OR FLOOR

Bronzed steel rail and special pole with black japanned brackets. Weight per foot, ½ lb.....Per foot **$0.50**

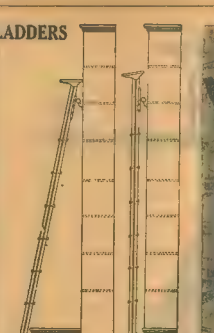
Nickel plated rail and special pole with nickel plated brackets. Weight per foot, ½ lb.....Per foot **.75**

Track prices quoted include rail for bottom and guide pole for top, complete with all necessary brackets, screws, pole ends, etc., finished ready to put up with a screw driver.

*For shipment from factory only.



No. 1 Auto Straight. For Floor.

No. 9 Chicago Straight. Trolley Type

*AUTO

This ladder used where it is not desirable to have track on the floor. It is guided by upper guide alone. The hooks are arranged to slide in a slot so as to adjust themselves automatically to the position of the pole, permitting the bottom of the ladder to be pulled out from the shelving for easy climbing or to be pushed up close to be out of the way. Adapted for short runs and cramped places where room is limited. Made from selected hardwood. Nickel plated or japanned finished mountings, provided with smooth treads to run on bare floor.

No. 7—Shipping weight each, 46 lbs.....Each **$20.00**

*Guide track or pole for Auto Ladder. Japanned mountings. Weight per foot, 1½ lbs.....Per foot **.50**

Guide track or pole for Auto Ladder. Nickel plated mountings. Weight per foot, 1½ lbs.....Per foot **.60**

*CHICAGO

Made of yellow Georgia pine with plain sides, or natural finish oak with ornamental open work sides. Japanned mountings. Consists of two wheels each at top and bottom. Track is open, permitting the use of large wheels. A special device prevents tipping of ladder, and it cannot possibly get off track.

When so ordered the Chicago Ladders are made to turn corners or follow any crooked or curved track.

No. 9—Yellow Georgia Pine with plain sides. Shipping weight each, 50 lbs.....Each **$20.00**

Natural Oak Finish with ornamental open work sides. Shipping weight each, 50 lbs.....Each **24.00**

For ceilings over 15 feet high, add to above prices.....Extra **2.00**

Double Steel Track for Chicago Ladders, with wood center, complete with hangers, screws, etc. Weight per foot, 1 lb.....Per foot **.50**

Wood ceiling strips..... " **.10**

Curves for track.....Extra **2.00**

To order the Chicago Ladders, give the height of ceiling, length of each track and number of ladders wanted for each run. State whether ceiling is plastered, wooden ceiling or open joists. Ceiling strips will only be sent when expressly ordered. Any suitable strip of wood, five inches wide, will answer the purpose, and can usually be supplied by the customer and saves the freight.

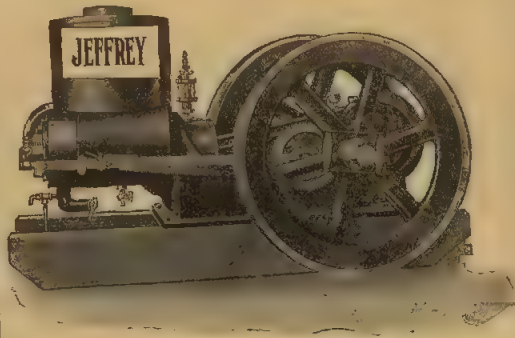
JEFFREY GASOLINE AND KEROSENE ENGINES

30 DAY FREE TRIAL
FIVE YEAR BINDING GUARANTEE

We guarantee every Jeffrey engine we sell to be made of the very best material and workmanship and to be free from flaws or imperfections of any kind. Any part showing defect within a period of five years will be replaced free of charge. We guarantee that every engine will develop 15 per cent more than its rated horse power and be as economical in fuel consumption, either gasoline or kerosene, as any engine made. We guarantee it will reach you safely and complete in every way and when given water, fuel and oil will start and run satisfactorily, pulling 15 per cent more than its rated horse power.

Furthermore, we agree that you are to have the privilege of testing engine for 30 days and should it not please you in every particular, you are to have the privilege of returning it at the end of thirty days, and all money and transportation charges will be refunded. We, however, must be notified before engine is returned, and same must be shipped direct to the manufacturer—not to us.

HOLMES CO-OPERATIVE COMPANY.



Jeffrey Gasoline and Kerosene Engines are constructed of the best of materials; by skilled gasoline engine workmen in one of the largest, most complete and up-to-date factories in the United States. Every late, modern, up-to-date improvement, which is of any special benefit to gasoline or kerosene engines, is embodied in the Jeffrey's, making it the most economical fuel burning engine on the market. Each and every engine is covered by our binding, written guarantee, which is backed by the factory manufacturing this engine, also by ourselves, so in buying a Jeffrey engine you are sure of getting an engine that is constructed properly; an engine that is really 15 per cent larger than its rated horsepower; an engine that will start easy; run right and give you the service and satisfaction possible to obtain from any gasoline engine built, regardless of the price.

Jeffrey Engines are shipped Direct to you from Factory and sold to Co-Operative Members at Factory Prices. No Jobber, Wholesaler, or Retailer gets a profit on the Jeffrey Engine. Compare our prices with your dealers. You will find that we save you from 40 to 60 per cent.

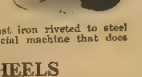
CYLINDER AND BED

The Jeffrey Engine Cylinder and Bed is cast in one solid piece. Notice illustration carefully as to the massiveness of its construction. Observe the size and shape of main bearings. The bed is designed for strength and safety and eliminates any danger of parts slipping, becoming loose or getting out of alignment. This also means that the mechanism operates in perfect harmony. It prevents the possibility of ill fitting joints and bearings furthermore it decreases the great power absorbant friction, thus producing a quiet and smooth running engine. The cylinder is carefully bored, reamed and faced by special machines insuring a perfect fit with piston. Troublesome and unsealed for packings have been eliminated in its entire construction by building the cylinder head and cylinder in one piece.

CYLINDER HEAD AND VALVES

The head of the Jeffrey is like the cylinder, is water cooled in all sizes except the 1¼ and 2 H. P. In these small sizes there is not enough heat generated to require it.

Jeffrey Valves are of extra large dimensions, allowing the incoming charge to completely fill the cylinder and the exhaust to be expelled freely without back pressure. The heads are made of cast iron riveted to steel stems, and are ground into their seats on a special machine that does it perfectly.



THE IGNITOR

Jeffrey Engines are regularly equipped with the make-and-break system of ignition, so called by reason of the way it works. It consists of one stationary insulated electrode and one movable one, called the hammer both fitted with special points. When the proper time to fire the charge occurs the hammer is tripped and both points of the electrodes brought in contact. This closes the electric circuit for an instant and as they fly apart a good hot spark is generated. It is a very simple, reliable system, easy to understand and rarely ever causes trouble.

FLY-WHEELS

While it may seem that fly-wheels are not of much consequence, they are really quite an important part of an engine. It is a favorite place for manufacturers who wish to cheapen their engine to cut out weight. It would be almost impossible to get a ½ wheel too heavy. Its function is to store up energy and to carry the engine over the idle stroke. This is a dimension the careful buyer will look into critically in selecting an engine. The Jeffrey fly wheels are large, carefully machined, perfectly balanced, and of large dimensions and ample weight.

PISTON RINGS AND CONNECTING ROD

Both piston and rings are made of the best close grained iron, accurately machined and finished in special machines. Piston is the extra long trunk type ground to fit cylinder perfectly. Connecting rod is of the "I" beam section made of material that positively will not crystalize. It is fitted with bronze bearings at piston and special hearts at crank end, with provision for taking up wear at both places. Piston pin is steel ground and hardened. Rings are made then locked in a special machine, returned and ground, insuring a perfectly gas-tight piston.

CRANK SHAFT

Crank shafts in the Jeffrey Engines are of ample size, of full length, the pulley is keyed directly to the shaft instead of being bolted to the fly-wheel. This makes it possible for you to use any pulley that will fit the shaft.

Cranks are forged from a solid piece of special high carbon steel, turned and ground absolutely true.

The size of the crank is an excellent criterion of the quality of an engine. It is to the engine what legs are to a horse. Don't buy any engine without knowing the diameter of the crank shaft.

CARBURETOR

Carburetor is of our special design suction feed from fuel tank located in base of engine. It is simple, fool-proof and absolutely reliable, has an air shutter for easy starting and will not leak gasoline even if valve is left open. It is so constructed that the fuel is mixed automatically with the proper amount of air to produce a perfect explosion.

THE GOVERNOR

The governor of the Jeffrey is very simple, positive in action, and will regulate the speed of the engine to a nicety whether the engine is running light or on full load. It consists of two weights straddling the fly-wheel hub and hinged to a collar fastened to the hub. This is an old and thoroughly tried type of governor and never gives any trouble. There is also provision for changing the speed of the engine while running.

WEBSTER-OCILLATING MAGNETO

A Webster Oscillating Magneto, which we can supply on all Jeffrey Engines (see prices), makes the engine exceedingly easy to start, summer or winter; no batteries, coil or switch are required. It makes a big hot spark on the first turn of the fly wheels. WATER, OIL AND DIRT PROOF. Guaranteed to furnish a satisfactory spark as long as the engine lasts.

COMBINATION ANVIL, VISE AND DRILL

$4.45

Made of cast iron and steel, japanned black. This is a thoroughly good serviceable tool, and particularly suited to the home and farm, and small mechanics. Just the tool to have in the garage, nothing on the market to equal it for the price; one of our best sellers and guaranteed to give satisfaction. It can be converted from a vise to a drill instantly and takes the place of several high priced tools. Main body and jaws made of cast iron, sliding draw bar, vise handle and drill mandrel of high carbon steel, cutting off handle of high grade tool steel. Anvil face and jaws are ground, polished and lacquered, all other parts nicely japanned in black. Shipped from factory at Kansas City.

B-2085—Combination Anvil Vise and Drill **$4.45**

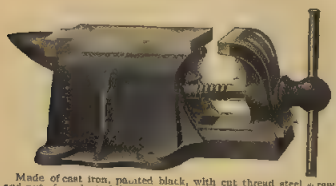
EVERY FARMER SHOULD HAVE ONE

CAST IRON ANVILS

These Anvils are made of a special very tough cast iron or semi steel, painted black. Faces are ground, polished and lacquered and well proportioned, and, while not recommended for regular blacksmith's work, makes a good serviceable anvil for the farm and small machine shop. Shipped from factory in Northern Missouri or Illinois.

B-2086—Weight, 50 lbs. **$3.45**
B-2087—Weight, 70 lbs. **5.20**
B-2088—Weight, 100 lbs. **6.60**

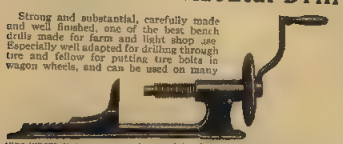
ANVIL AND VISE



Made of cast iron, painted black, with cut thread steel screw and nut, forged steel handle. A splendid seller and big value for the money. While not intended for heavy work, is just the thing for the man who wants to do tinkering and for small machine shops and garages. The anvil face and jaws are polished and lacquered, jaws 3 inches wide, open 5 inches, also provided with special jaws for holding pipe. Weight, 25 lbs. Shipped from factory at Kansas City or Northern Illinois

B-2089—Combination Anvil and Vise **$1.90**

Blacksmith Horizontal Drill

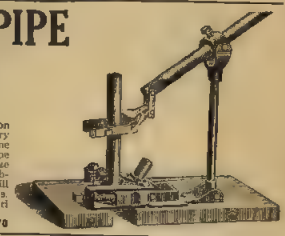


Strong and substantial, carefully made and well finished, one of the best bench drills made for farm and light shop use. Especially well adapted for drilling through tire and fellow for putting tire bolts in wagon wheels, and can be used on many jobs where even an expensive upright drill cannot be used.

Chuck furnished regularly takes standard square shank drills. Can also be furnished to take standard half round when ordered. Length, 20 inches; adjustment, 12 inches; weight, 28 lbs. Shipped from factory at Kansas City or Northern Illinois.

B-2090—Blacksmith's Horizontal Drill .....

BABCOCK PIPE LIFTER



Made of cast iron and steel, mounted on a 2-inch plank, painted black. Very simple and rapid in action, the best machine ever invented for raising or lowering pipe in wells of any depth, will handle any size pipe up to and including 2 inches, substantially made, and with fair usage will last a lifetime. Weight, 45 pounds. Shipped from factory in Northern Missouri or Illinois.

B-2091—Babcock Pipe Lifter **$8.70**

Giant Pipe Holder

Made of cast iron, mounted on 2-inch plank, painted black, adjustable to handle pipe up to and including 2 inches; has a chilled hardened concave pipe jaw, which will hold wet or greasy pipe, yet will not crush or damage it, nothing better for holding pipe when lowering or lifting it out of a well. Length, 2 ft.; width, 8 inches; weight, 30 lbs. Shipped from factory in Northern Missouri or Illinois

B-2092 Giant Pipe Holder **$3.00**

SELF LOCKING PIPE VISE

One of the most useful tools a farmer can buy. It is strongly constructed; the base has lugs on both sides so that the latch may hang on either side; only the highest grade material is used in the construction of the frame. The jaws are of high grade hardened carefully tempered steel; the screw is perfectly constructed; all parts are strongly connected and it can be easily taken apart so any section may be easily replaced.

No stock man, farmer, mechanic, pump dealer, well driller or any one using rods, pipes or pumps can afford to be without this economical durable pipe vise, it will save its cost within a very short time by your being able to do your own repair work. Shipped from Western Illinois factory

B-2093—Pipe Vise, capacity pipe, ⅛ to 2½ in. **$3.10**
B-2094—Pipe Vise, capacity pipe, ⅛ to 3½ in. **4.85**
B-2095—Pipe Vise, capacity pipe, ⅛ to 4½ in.

$49.50 2 Horse Power Engine
30 DAYS FREE TRIAL
5 YEAR GUARANTEE

2 HORSEPOWER JEFFREY ENGINE—Our 2 horsepower engine can be used for running light machinery. Any machine that can be turned by hand can be run by the engine. For pumping, it is the ideal engine. It will operate almost any ordinary pump and have enough reserve power for forcing water to any reasonable distance. It will operate a No. 3 centrifugal pump with 10 feet or under, total head. It can be used for light wood sawing with a small saw. Each 2 horsepower Jeffrey Engine is sold on our 30 Day Free Trial Plan and is covered by our binding five-year guarantee.

SPECIFICATIONS AND PRICES—BORE 4 inches. Stroke 5 inches. Speed, 450 Revolutions per minute. Diameter Crank Shaft, 1¾ inches. Diameter Fly Wheels, 18 inches. Weight Fly Wheels, 165 pounds. JEFFREY ENGINES ARE GUARANTEED FOR FIVE YEARS

FURNISHED WITH WOOD SKIDS OR IRON BASE

$67.00 3 Horse Power Engine
30 DAYS FREE TRIAL
5 YEAR GUARANTEE

3 HORSEPOWER JEFFREY ENGINE—This is a very good size to order if you want an engine just a little larger than a 2 horse power and do not want to order a 5 horse power. However, do not make the mistake that so many do and order an engine too small for your needs. It is far better to order an engine larger than you need at the present time as the longer you have an engine, the more work you will find for it to do. Our 3 horsepower engine, as well as all of our engines, is sold on our 30 Day Free Trial Plan and guaranteed for five years. Read guarantee carefully.

SPECIFICATIONS AND PRICES—Bore 4½ inches. Stroke 6 inches. Speed, 425 Revolutions per minute. Diameter Crank Shaft, 1¼ inches. Diameter Fly Wheels, 24 inches. Weight Fly Wheels, 180 pounds. Pulley Size, 8 in. diameter, 5 in. face. Floor Space, 24x48 inches. Weight on Iron Sub-Base, 580 pounds. Weight on Wood Skids, 500 pounds. Furnished on Wood Skids or on Iron Base and with or without Webster Magneto. Note prices. Shipped direct to you from factory in Iowa.

$97.50 5 Horse Power Engine
30 DAYS FREE TRIAL
5 YEAR GUARANTEE

5 HORSEPOWER JEFFREY ENGINE—Our 5 H. P. Jeffrey Engine is a good size for all around light farm work. It will do all the work that can be done by a smaller engine, using only as much fuel as the power used calls for, and it will run small feed grinders, corn shellers, shredders, light ensilage cutters. It will handle a saw up to 28 inches, sawing as fast as the wood can be handled. On a line shaft it will run several small machines at once. Bear in mind when buying an engine that you can do any light work with a large engine, but cannot do a large engine's work with a small engine. Sold on 30 Days Free Trial and with our binding 5 year guarantee.

SPECIFICATIONS AND PRICES—Bore 5 inches. Stroke 9 inches. Speed, 375 Revolutions per minute. Diameter Crank Shaft, 1 13/16 inches. Diameter Fly Wheels, 36 inches. Weight Fly Wheels, 320 pounds. Pulley Size, 10 inch diameter, 6 inch face. Floor Space, 30x60 inches. Weight on Iron Sub-Base, 880 pounds. Weight on Wood Skids, 750 pounds. Furnished on Wood Skids or on Iron Base and with or without Webster Magneto. Note prices. Shipped direct to you from factory in Iowa

JOHNSON'S FOLDING PAPER

Johnson's..... Per dozen, $6.00
Packed one dozen in a heavy manila envelope. Assorted half male and half female. Weight per dozen complete, 4½ lbs.

The Decoy is printed on a heavy grade of jute cardboard, a very tough stock put through a water-proofing process which makes it impossible to absorb moisture. This is made to float by inserting a quarter-inch spruce board, which is dyed water color and is also water-proof. The Decoy is made to retain its upright position in the water by a pendulum weight weighing about an ounce which is attached to the float by means of a 10 in. shiff wire. A string and anchor is attached to one float in each carton as a suggestion.

Made of very heavy material. Lamp door held in position by patented 3-spring joint fasteners. Furnished with Ediswan socket and 6 volt lamp. Furnished in black and nickel only

Size of face 5¼ inches. Shipping weight per pair 4 lbs.

A-726—Side Lamp **$3.47**

ELECTRIC TAIL LAMP

Small, neat design. Finished in black enamel with 3¼ inch ruby lens, complete with bulb. Has universal bracket. Finished in black. Shipping weight 20 ounces.

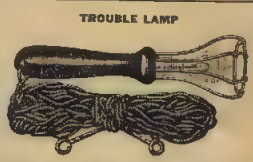
A-719—Tail Lamp **79c**

ELECTRIC SPOTLIGHT WITH MIRROR

A high grade lamp with 21 c. p. nitrogen bulb, attached to windshield by bracket containing universal swivel which permits light to be turned instantly in any direction. Has self-contained switch, and light may be turned on or off instantly. Diameter of door 6½ inches. Shipping weight, 5 lbs.

A-723—Electric Spotlight **$3.69**

TROUBLE LAMP



Furnished with imitation ebony handle, 6 volt 4 c. p. bulb, protected by heavy wire guard, and ten feet of flexible lamp cord with standard copper terminals. May be attached to any storage battery or four dry cells.

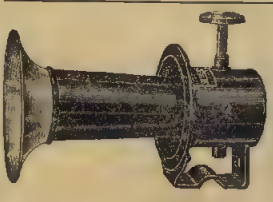
A-727—Trouble Lamp **72c**

DASH LAMP

This lamp is superior in design, quality and workmanship to any lamp on the market. It has a straight shank and measures 2½ inches from the face of the flange to the center of the opening in the shade. A feature that makes this lamp especially desirable is the self-contained switch which eliminates the necessity of purchasing a switch and does away with the attendant trouble of wiring. Lamp is finely nickel plated and furnished with a 2 c. p. bulb in any standard voltage

A-720—Dash Lamp **$ .93**

JUBILEE HAND HORN



This is a good substantial built horn, has a heavy tone, plenty of volume, good bearings and well put together. Will outlast many of the higher priced horns. Furnished in black and nickel.

A-728—Horn **$3.10**

FAMOUS "KING" WASHER

With Ball Bearing Reversible Swinging Wringer. Can Be Used With Gasoline Engine or Electricity

DESCRIPTION

In Construction and Finish this machine is unexcelled. It is very simple and all the mechanism is perfectly fitted and very strong. With proper care the "King" washer will last for many years. The tub is made of selected Southern cypress—"the wood everlasting"—is well built and finely finished with good quality varnish. All the mechanism is placed underneath the tub on a strong steel frame. (Except the upper wringer driving gear, which is fully enclosed so that there is no danger of hands or clothing of the operator being caught). All parts are electro-galvanized. This finish is much more attractive than paint, and as it will not peel nor check, it will last a lifetime and effectually prevent rust.

Simple in Operation. The operation of this machine is simple in the extreme, as there is nothing about it to get out of order. The clothes are placed in the tub with a sufficient quantity of boiling water so that they will float, and enough soap to make a good suds. It is not necessary to use chemicals or prepared washing powders of any kind. The action of the agitator does not rub the clothes against the sides or the bottom of the tub, but operating as it does at a good speed, forces the boiling suds back and forth through the very fibre of the clothes, thus loosening all of the dirt without wearing out the clothes or damaging them in any way as when rubbed on the old fashioned rubbing board. This machine not only saves time, labor and clothes, but actually washes any article much cleaner than is possible by hand.

The Frame or Standard is made of angle steel, the different pieces being securely riveted to each other, forming an exceedingly strong and rigid frame, which at the same time, is not heavy nor cumbersome. The entire frame has electro galvanized, non-rust finish, and is mounted on strong steel casters which allow the machine to be readily moved from place to place.

The Steel Extensions for holding three extra tubs are hinged to the sides of frame, and provide substantial supports for the tubs. When not in use these extensions are folded up close against the tub and are entirely out of the way. The complete machine then occupies no more space than the ordinary one-tub machine. Please note that washer is furnished with or without extensions. See prices below.

Ball Bearing Swinging Wringer. A special feature of this machine is the swinging or adjustable wringer. This can be instantly swung into any one of three different positions—for wringing clothes from machine to rinse water, then bluing water, and finally to clothes basket—by simply pulling out a small top or pin, which secures locks wringer into place when released. It is of the highest grade, nicely fit shed, and fitted with ball bearings. The rubber used in the rolls is of the very best quality and with proper care will give perfect satisfactory service. This wringer is fitted with a new patented device which allows the rolls to be relieved of all pressure instantly as is sometimes necessary should the operator carelessly catch her finger or if for any reason it is desired to release the rolls of pressure quickly. It is started, stopped, or reversed by a conveniently located lever.

Cost of Operation. The cost of operation is so small that it need hardly be considered, as when a gasoline engine is used for power the entire cost is covered by the amount of gasoline necessary to run the engine. Five cents will certainly cover the biggest kind of a family washing. If an electric motor is used for power the cost is very light—less than two cents per hour. As the average family washing can be finished complete in from two to three hours' time, the total cost for electricity will never be more than ten cents per week.

The King Washer can be operated by a gasoline engine or by an electric motor. Note prices.

Illustration shows Washer equipped with extensions for holding extra tubs. When not in use these extensions are folded flat against machine. Washer can be supplied with or without these extensions. Note prices.

The Motor. The electric motor is of ample strength to run the wringer and the washing machine at the same time. All of these electric machines are regularly equipped with motors for use on alternating current, 110 volt, 60 cycles electric systems, as these specifications are proper for practically all the electric light systems today. The machine can be furnished, however, with motors for use on any odd voltage system. In order that the proper motor shall always be sent, we request that orders for electric machines specify current, volts and cycles.

All Washers are fully tested before being shipped and carefully crated and shipped direct to you from Illinois Factory. Shipping weight about 185 lbs.

B-100—King Washer with Swinging Wringer for gasoline engine power without steel extensions **$42.95**

B-101—King Washer with Swinging Wringer for gasoline engine power with steel extensions **$44.50**

EXCELLO POWER WASHER

With Ball Bearing Reversible Swinging Wringer

DESCRIPTION

Practically every up-to-date farmer owns a gasoline engine or has his farm equipped with electricity, and while he finds it a great convenience in grinding feed and doing a great deal of other work around the farm, the farmer's wife still, to a large extent, does her washing by hand. There are many hours in a week, when the gasoline engine or electric current is not in use and there is no reason why it should not be used to relieve the housewife of the hardest part of her work—the weekly washing.

Finish. The construction and finish of the Excello Washer is high grade in every respect. It is very simple and every part of the mechanism is not only carefully fitted, but of great strength. With proper care, it will last for many years. The tub is made of selected Southern Cypress—"the wood everlasting," finely finished with good quality of varnish. The gearing is all placed underneath the tub on a heavy iron bracket, which also acts as a brace for the legs. All metal parts are sherardized; a finish that is far more attractive than paint, and as it will not peel or check, effectually prevents rust. The legs are fitted with strong casters, which allow the machine to be moved easily.

Ball Bearing Wringer. The wringer furnished is of the largest grade obtainable, nicely finished and fitted with ball-bearings. The rubber used in the rolls is of the very best and with proper care, this wringer will give perfect service for many years. It is connected in such a manner that it can be run in either direction and can also be run at the same time the washing machine is in operation, or independently of it. Is fitted with safety release device, which relieves rolls of all pressure instantly. An extra drain board is furnished for use when wringing from the blueing water to the top of tub.

Cost of Operation. The cost of operation of this machine is simple in the extreme, as there is nothing about it to get out of order. The large belt drive wheel is located underneath the tub. This does away with any possibility of the operator's skirts catching in belt or shafting. On account of being equipped with a power driven wringer, it relieves washday of every particle of work, of which the wringing has always been the hardest part. The cost of operation is simply the small amount of gasoline or electric current used each washday and is so small that it cannot be estimated. Five or ten cents per week will undoubtedly cover it.

The Excello Washer can be used with a gasoline engine or with an electric motor. We can furnish same equipped with a high grade motor as per the following description.

The Motor. The motor is of simple strength to run either the washing machine alone, or the washing machine and wringer at the same time, if the tub is not overloaded. It is the best motor manufactured today for use on washing machines and is thoroughly dependable. Orders must specify if for use on direct or alternating current, also voltage and cycles.

The Excello Washer is carefully tested before being shipped. Is crated and shipped direct to you from Illinois Factory. Shipping weight about 150 lbs.

B-104—Excello Washer with Swinging Reversible Wringer for gasoline engine power **$39.75**

B-105—Excello Washer with Swinging Reversible Wringer and electric motor complete **$69.50**

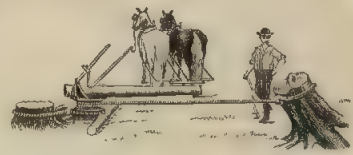
SUPREME STUMP PULLER

INCREASE THE VALUE OF YOUR WASTE LAND FROM $50 TO $250 AN ACRE — DO IT WITH A STUMP PULLER

The Stump Puller is one of the most profitable investments on the farm today. It will clean your waste stump acreage when other work must be abandoned, as during the wet season, and give you access to your virgin soil, the most productive soil on earth.

The low-down feature of our Stump Puller insures the greatest leverage possible in a machine of this class, its V-drum is designed to preserve the life of the rope, winding it in even layers; its platform is designed for use on either the lever ground or on the hillside; it is provided with a ratchet-pawl to secure the load, and working automatically, while the sweep-lift throws the machine in and out of gear to unwind the rope or allow the team to cross the rope with loose tugs.

The capacity of each size of the machine is clearly given in the following specifications, but in making your selection see that the size is liberally large, as the saving in labor will more than make up the difference in first cost. The use of the snatch block is advised in all work over 10 inches through. Shipped from Southern Minnesota factory.



Article No.	Horses Required	Steel Pull Rope: Length Feet	Steel Pull Rope: Diam Inches	Anchor	Size Stump Inches	Shipping Weight, Pounds	Price
B-100	One or Hand	30	½	5 foot loop	4	175	$25.95

B-102	1 or 2	50	¾	6 foot rope	16 to 18	350	51.95
B-103	1 or 2	60	7/8	8 foot rope	24	425	67.95
B-104	Two	70	1	8 foot rope	30	550	87.45

STUMP PULLER ROPE

From one of the largest and best manufacturers of high grade rope. One grade only, especially tempered, carefully assorted wires of No. 1 steel. Furnished any length, 10 feet or over, prices without couplings or fittings.

Article Number	Diameter Rope	Weight per 100 feet	Price, per ft.
B-105	½-inch	39 pounds	$ .13
B-106	5/8 inch	62 pounds	.18
B-107	¾ inch	89 pounds	.25
B-108	7/8 inch	126 pounds	.32
B-109	1 inch	158 pounds	.41

STUMP PULLER ACCESSORIES

ROPE COUPLINGS

The coupling is formed by using a Rope Hook on the end of one rope and a Slip Loop Coupler on the end of the other rope, a projection on the Rope Hook locking the coupling securely. They can be attached or detached instantly, and make the only practical coupling for wire rope.

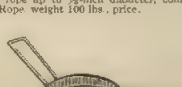
Prices for Rope Hook and Slip Loop Coupler

	Dia. Rope	
B-110	½-inch, weight 8 lbs.	$1.25
B-111	5/8 inch, weight 12 lbs.	1.40
B-112	¾ inch, weight 18 lbs.	1.67
B-113	7/8 inch, weight 24 lbs.	1.90
B-114	1 inch, weight 30 lbs.	2.45

PATENT SNATCH BLOCK

Designed to increase the power of the machine. Can be opened instantly to place on or take off the rope as heavy or light work requires. The steel shells are perfectly centered on a cold-rolled pin fastened with spring cotters. Positively the most dependable Snatch Block on the market today.

B-115	For use with rope up to ¾-inch diameter, complete with 10-ft. ½-inch Hitch Rope, weight 50 lbs., price	$12.95
B-116	For use with rope up to ⅞-inch diameter, complete with 15-ft. ⅝-inch Hitch Rope, weight 80 lbs., price	16.95
B-117	For use with rope up to 1⅛-inch diameter, complete with 15-ft. 1-inch Hitch Rope weight 100 lbs., price	21.95



TWIN ROOT HOOK

Designed for use in clearing land of land stumps, stool grubs, roots and underground growths, where it is not possible to hitch to with the pull rope. This design is peculiarly adapted for underground growths such as mesquite, sage brush and willow bunches. Made of best cast steel. Weight 80 lbs.

B-127 Twin Root Hook $18.95

ANCHOR ROPES

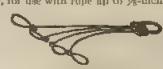
For anchoring machine to a tree, stump or to the ground, allowing the team to work between the machine and anchor. Each rope 25 feet long, made of our regular steel wire stump puller rope, and fitted with our interchangeable rope couplings.

B-118	½-inch Anchor Rope, weight 35 lbs., price	$ 7.35
B-119	⅝-inch Anchor Rope, weight 45 lbs., price	9.50
B-120	¾-inch Anchor Rope, weight 55 lbs., price	12.95
B-121	1-inch Anchor Rope, weight 70 lbs., price	15.00

ROPE SHORTENER

Our Rope Shortener, or take-up for slack rope, is designed for use where the pull rope is extra long. Takes a secure hold of the rope, and enables the operator to make a hitch at any point in the rope at the stump to be pulled.

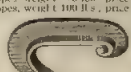
B-128	Rope Shortener, for use with rope up to ½-inch diameter, price	$3.30
B-129	Rope Shortener, for use with rope up to ⅝-inch diameter, price	4.75
B-130	Rope Shortener, for use with rope up to ⅞-inch diameter, price	5.45



CLUSTER ROPES

Designed for use in thick growths of trees, stumps, brush or grubs. Made of regular steel wire stump puller rope from ropes, each 10 feet long, and with rope hooks and babbitted securely in Cluster Anchor. A loop of same quality rope is secured to the anchor for attaching pull rope.

B-122	½-inch Cluster Ropes, weight 50 lbs. price	$15.85
B-123	⅝-inch Cluster Ropes, weight 70 lbs. price	18.85
B-124	¾ inch Cluster Ropes, weight 100 lbs., price	22.85



DOUBLE POINT ROOT HOOKS

Made of best cast steel, and especially adapted where a light implement is required in pulling brush, grubs and roots. Made in two sizes. Weight 30 and 40 lbs.

B-125	Double Point Root Hook, price	$7.25
B-126	Double Point Root Hook, price	9.50

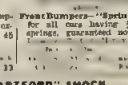
"HARTFORD" SHOCK ABSORBERS



Makes Every Road a Boulevard

½ sets for front or rear

Each $9.02
$11.55

AUTOMOBILE HORNS

KLAXON

The Standard Warning Signal, The Note is Carried Far Ahead in the Country; You Get Instant Attention and Action in Town

The Long Note—the kind you use in the Country, is Clear, Bugle-like and Great Carrying Power. It is Heard Around Bends, Under Culverts, Over Hill. The Automobilist Ahead Hears it above his engine and the shifting of his gears. The Wagon Driver Ahead Hears it, above the rumble of his Wagon and the clatter of his horses' hoofs. With a Klaxon it is unnecessary to Slow Down and Wait for the Vehicles Ahead to Turn Out—Your Share of the Road is Ready when you get there.

The Short, Sharp Note—from a Light Touch to the Button—is called a "Tiger." In Town this is Enough. It is heard above the noise of traffic. It Penetrates the Thoughts of Careless, Absent-Minded Pedestrians. It can't go unheard. It can't be misunderstood. It's a True Warning.

KLAXON FINISHES

The Smart Finish is "KLAXON BLACK" Black Enamel throughout. It is not only the fashionable finish but the most practical as well—requires no polishing or attention.

ELECTRIC KLAXONS

The Electric Klaxons (Klaxon 29-L, Klaxon 12-L, Klaxon 6) are supplied complete, ready for installation—with ten feet of double insulated wire and push button matching finish of instrument. Electric Klaxons are regularly wound for 6 volts.

ELECTRIC

Each

No. 29-L—Projector 9½ in. Long; Bell 8x8½ in.; Length Overall, 12 in.; Height Overall, 10½ in. $30.00

One in a Box

Weight Each about 20 Lbs.

ELECTRIC

Constructed for Use Under Hood of Machine but can be Attached Outside of Car same as any other horn.

Each

No. 12-L—Projector 7½ in. Long; Bell 4⅝x4⅝ in.; Length Overall, 12½ in.; Height Overall, 6⅝ in. $15.50

One in a Box

Each

No. 5 . . . . . $7.25

One in a Box; Weight Each about 5 Lbs.

AERMORE EXHAUST HORN

The Standard Exhaust Signal; Warns without frightening; Easily Attached; No cost of operation; Nothing to get out of order

Built on the Pipe Organ Principle, each Tube gives a different note—when sounded together gives a Clear Musical Tone which is pleasing to the ear, at the same time producing an Effective Warning.

Operated by means of a Foot Pedal which closes the valve attached to rear of muffler; Each Horn furnished with complete equipment and Full Instructions for Installing.

Each

No. 1—For Cars of 40 to 60 H. P. $9 00

No. 2—For Cars of 25 to 40 H. P. 8 00

No. 3—For **Fords** and Cars of 20 to 25 H. P. 7.50

Valve Only—Any Style, Any Size. 1 50

Note: Be sure to specify desired Size and Style of Valve when ordering. No 1 and 2 will work satisfactorily Ahead of the Muffler on Fords and other light cars.
